We recognize that we would need to retroactively modify the previously established policy at § 414.1365(e)(4) for the CY 2023 performance period/2025 MIPS payment year to address the fact that we cannot calculate the complex patient bonus at the subgroup level. Section 1871(e)(1)(A)(ii) of the Act provides for retroactive application of a substantive change to an existing policy when the Secretary determines that failure to apply the policy change retroactively would be contrary to the public interest. We believe that the failure to apply the proposed change retroactively would be contrary to the public interest because the current rule provides for the calculation of the complex patient bonus score at the subgroup level when it would be impossible for CMS to do so. For the reason stated previously in this section, we are proposing to add § 414.1365(e)(4)(i) to provide that for subgroups, beginning with the CY 2023 performance period/2025 MIPS payment year, the affiliated group's complex patient bonus will be added to the final score. Additionally, we are proposing conforming changes in § 414.1380(c)(3)(v) by removing the term "subgroups" so that beginning with the CY 2022 performance period/2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. Similarly, we are proposing conforming changes in § 414.1380(c)(3)(vi) by removing the term "subgroups" so that beginning with the CY 2022

performance period/2024 MIPS payment year, for MIPS eligible clinicians and groups, the complex patient bonus components are calculated as described under § 414.1365(c)(3)(vi).

We are requesting comments on this proposal.

(4) Targeted review for subgroups

We previously established at § 414.1385(a) that a MIPS eligible clinician or group may request a targeted review of the calculation of the MIPS payment adjustment factor under section 1848(q)(6)(A) of the Act and, as applicable, the calculation of the additional MIPS payment adjustment factor under section 1848(q)(6)(C) of the Act (collectively referred to as the MIPS payment adjustment factors) applicable to such MIPS eligible clinician or group for a year (81 FR 77353 through 77358 and 77546). We also finalized the process to submit a targeted review application, codified at § 414.1385(a) (81 FR 77353 through 77358 and 77546). Similar to the previously established targeted review process for individual clinicians and groups, MIPS eligible clinicians who participate in MVP reporting and are scored as a subgroup may request a targeted review beginning with the CY 2023 performance period/2025 MIPS payment year. We recognize that we did not propose changes in the existing language for targeted review at § 414.1385(a) to reflect the availability of the targeted review process for subgroups. We are proposing to modify § 414.1385(a) to state that a MIPS eligible clinician, group, or subgroup may request a targeted review of the calculation of the MIPS payment adjustment factors applicable to such MIPS eligible clinician, group, or subgroup for a year. We are also proposing to modify § 414.1385(a)(1) to state that a MIPS eligible clinician, group or subgroup (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a request for a targeted review. Additionally, we are proposing to make conforming changes at § 414.1385(a)(3), (5), and (6) to remove the term “MIPS eligible clinician or group” and add in its place the term “MIPS eligible clinician, group, or subgroup.” With these proposals, a subgroup that would like to request a review of the calculation for the MIPS

payment adjustment factor for MVP data submission in the CY 2023 performance period/2025 MIPS payment year may also submit a targeted review application. We note that we are proposing additional changes to the targeted review process set forth in § 414.1385(a) as further described in section IV.A.4.j. of this proposed rule.

We are requesting comments on the above proposals.

(5) Codification of previously finalized subgroup policies from preamble

We have identified that some subgroup policies were finalized in prior rulemaking but were not codified in the CFR. Additionally, we neglected to propose to include subgroups in our previously established definition of “attestation” in § 414.1305. We have reviewed the existing language and identified policies that should be codified. We now propose to correct these errors.

It is necessary for each of the proposed changes to the policies described below to be effective beginning with the CY 2023 performance period/2025 MIPS payment year in order for MIPS Value Pathways to operate effectively. Section 1871(e)(1)(A)(ii) of the Act provides for retroactive application of a substantive change to an existing policy when the Secretary determines that failure to apply the policy change retroactively would be contrary to the public interest. Here, we believe that the failure to apply the proposed changes retroactively would be contrary to the public interest because the discrepancies remedied by the below proposals may cause undue confusion for clinicians participating as subgroups and may also create unintended errors in program implementation.

(a) Definitions

(i) Attestation

At § 414.1305, we currently define attestation to mean a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician or group may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS. Beginning in the CY

2023 performance period/2025 MIPS payment year, clinicians participating as subgroups would submit data for the Promoting Interoperability and improvement activities performance categories in an MVP as described at § 414.1365(c). As described previously in this section, we are proposing to adopt this change retroactively pursuant to section 1871(e)(1)(A)(ii). We believe that the failure to apply the proposed change retroactively would be contrary to the public interest because it would create ambiguity in the requirement for a subgroup to submit data through an attestation for the Promoting Interoperability and improvement activities performance categories as described in § 414.1365(c). Therefore, we are proposing to add the term “subgroup” and revise the definition of attestation in § 414.1305 to state that attestation means a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician, group, or subgroup may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS.

We are requesting comments on this proposal.

(ii) Submitter Type

At § 414.1305, we defined a submitter type to mean the MIPS eligible clinician, group, Virtual Group, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, or APM Entity, as applicable, that submits data on measures and activities under MIPS. In accordance with the subgroup reporting requirements at § 414.1318(c), we inadvertently overlooked adding subgroups in the definition of submitter type at § 414.1305. As described previously in this section, we are proposing to adopt this change retroactively pursuant to section 1871(e)(1)(A)(ii).. We believe that the failure to apply the proposed change retroactively would be contrary to the public interest because it would create ambiguity in the requirement for a subgroup to submit data as described at § 414.1318(c). Therefore, we are proposing to add the term “subgroup” and revise the definition of submitter

type at § 414.1305 to state that a submitter type means the MIPS eligible clinician, group, Virtual Group, subgroup, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, subgroup, or APM Entity, as applicable, that submits data on measures and activities under MIPS.

We are requesting comments on this proposal.

(b) Data Submission Criteria for the Improvement Activities Performance Category

We refer readers to § 414.1360 for data submission criteria for the improvement activities performance category. In the CY 2022 PFS final rule (86 FR 65462), we finalized revisions to the data submission criteria at § 414.1360(a)(2) to allow subgroups to perform and attest to their improvement activities separately and to apply the 50 percent threshold within their subgroup. We inadvertently overlooked codifying subgroups in the regulation text at § 414.1360(a). The existing regulation text at § 414.1360(a) refers to data submission criteria in the improvement activities performance category for only MIPS eligible clinicians and groups. As described above, we are proposing to adopt this change retroactively pursuant to section 1871(e)(1)(A)(ii). We believe that the failure to apply the proposed change retroactively would be contrary to the public interest because it would create ambiguity in the data submission requirements established in § 414.1360(a)(2) regarding the reporting of improvement activities by subgroups. Therefore, we are proposing to revise § 414.1360(a) to state that for purposes of the transition year of MIPS and future years, MIPS eligible clinicians, groups, or subgroups must submit data on MIPS improvement activities in one of the following manners described at § 414.1360(a)(1) through (a)(1)(i).

We are requesting comments on this proposal.

e. APM Performance Pathway

(1) Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning in performance year 2021, which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. We also established that ACOs will be required to report quality data for purposes of the Shared Savings Program via the APP (85 FR 84722).

Under policies finalized under the CY 2023 PFS (87 FR 69858), to meet the quality performance standard under the Shared Savings Program through the 2024 performance year, we stated that ACOs must report the ten CMS Web Interface measures or the three eQMs/MIPS CQMS and the CAHPS for MIPS survey. Beginning in the 2025 performance year and subsequent performance years, ACOs must report the three eQMS/MIPS CQMs and the CAHPS for MIPS survey (87 FR 69858 through 69859).

(2) Proposal for the Medicare Clinical Quality Measure for Accountable Care Organizations Participating in the Medicare Shared Savings Program

As discussed in section III.F.2.b.(2) of this proposed rule, we are proposing to establish the Medicare Clinical Quality Measure for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) collection type in the APP measure set. The Medicare CQM collection type would be available to only ACOs participating in the Shared Savings Program. ACOs in the Shared Savings Program would have the option to report the Medicare CQM under the APP on only their attributed Medicare fee-for-service beneficiaries who meet the definition of a “beneficiary eligible for Medicare CQM(s)” as proposed in section III.F.2.b.(2) of this proposed rule, instead of their all payer/all patient population, beginning with the 2024 performance year. The Medicare CQM would also serve as another collection type in addition to the existing eCQM/MIPS CQM option, which is an all payer/all patient collection type under the APP.

In the CY 2023 PFS final rule, we stated that we will monitor the impact of policies such as the sunseting of the CMS Web Interface in the 2024 performance year and the requirement to report all payer/all patient eCQMs/MIPS CQMs beginning in the 2025 performance year (87 FR 69833). We also stated that we may revisit these and related issues in future rulemaking based on lessons learned as we gain more experience with ACOs reporting eCQMs/MIPS CQMs (87 FR 69833). As discussed in section III.F.2.b.(2) of this proposed rule, we are committed to supporting ACOs in the transition to all payer/all patient eCQMs/MIPS CQMs and in the transition to digital quality measurement reporting. We encourage readers to review additional background on our proposal to include the Medicare CQM collection type in the APP measure set discussed at section III.F.2.b.(2) of this proposed rule.

f. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We refer readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877,

86 FR 65431 through 65445, and 87 FR respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In this proposed rule, we are proposing to:

- Amend the definition of the term “collection type” to include the Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs).
- Amend (through technical modifications) the data submission criteria for MIPS quality measures and establish the data submission criteria for Medicare CQMs.
- Require administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey in the Spanish translation.
- Maintain the data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year, and increase the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year.
- Establish data completeness criteria for Medicare CQMs.
- Modify the MIPS quality measure set as described in Appendix 1 of this proposed rule, including the addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.

(b) Definition of Collection Type

With the proposed establishment of a new collection type, the Medicare Clinical Quality Measures for Accountable Care Organizations (ACOs) Participating in the Medicare Shared Savings Program (Medicare CQMs) specific to the APM Performance Pathway (APP) as described in section III.G.2. of this proposed rule, we are proposing to amend the definition of the term “collection type” to include Medicare CQMs in order account for the new collection type available only to Medicare Shared Savings Program ACOs meeting the reporting requirements of the APP. Specifically, starting with the CY 2024 performance period, we are

proposing to amend the definition of the term “collection type” in § 414.1305 to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); Qualified Clinical Data Registry (QCDR) measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey measure; administrative claims measures; and Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs). The Medicare CQMs collection type would serve as a transition collection type under the APP and be available as determined by CMS.

We seek public comment on the proposal to amend the definition of the term collection type to include the Medicare CQMs as an available collection type in MIPS.

(c) Quality Data Submission Criteria

(i) Data Submission Criteria for Quality Measures

In this proposed rule, we are proposing technical amendments to data submission criteria for MIPS quality measures and proposing to establish data submission criteria for Medicare CQMs. The participants in MIPS have expanded from MIPS eligible clinicians and groups to virtual groups starting with the CY 2018 performance period (82 FR 53593 through 53617), APM Entities starting with the CY 2021 performance period (85 FR 84860), and subgroups starting with the CY 2023 performance period (86 FR 65392 through 65394). In order to account for the expansion of participants in MIPS and the applicability of data submission criteria for MIPS quality measures, we are proposing technical amendments. We are proposing technical amendments to recognize that a virtual group, subgroup, and APM Entity are able to meet the data submission requirements pertaining to the quality performance category at

§ 414.1325(a)(1), (c), and (d). Also, we are proposing technical amendments to recognize that a virtual group and an APM Entity are able to meet the data submission requirements established at § 414.1335(a)(1)(i) and (ii) for the data submission criteria pertaining to Medicare Part B claims measures, MIPS CQMs, eCQMs, and QCDR measures. Additionally, in § 414.1335(a)(1)(ii), we are proposing to modify references of MIPS eligible clinicians and groups, to refer to such clinicians and groups in the singular to ensure that § 414.1335 uniformly references the various types of MIPS participants in the singular. We are making a grammatical correction to § 414.1335(a)(1)(i) to ensure subject-verb agreement. We note that the technical amendments in § 414.1335(a)(1)(i) and (ii) are not applicable to subgroups because MIPS subgroup participation is part of the MVP framework, which has separate data submission criteria specified in § 414.1365

We are proposing technical amendments to the data submission criteria for the CAHPS for MIPS Survey measure, which would identify the CAHPS for MIPS Survey as a measure in § 414.1335(a)(3). The current rule does not reference the CAHPS for MIPS Survey as a measure, which is erroneous. Also, we are proposing a revision to § 414.1335(a)(3) to recognize that a virtual group, subgroup, and APM Entity are able to administer the CAHPS for MIPS Survey in § 414.1335(a)(3)(i).

Additionally, we are proposing amendments to the data submission criteria for quality performance category at § 414.1325(a)(1)(i) and (ii) in order to clarify that the data submission of MIPS quality measures specific to eCQMs must be submitted utilizing certified electronic health record technology (CEHRT). Section 1848(q)(5)(B)(ii) of the Act provides that under the methodology for assessing the total performance of each MIPS eligible clinician, the Secretary shall: (1) Encourage MIPS eligible clinicians to report on applicable measures under the quality performance category through the use of CEHRT and QCDRs; and (2) For a performance period for a year, for which a MIPS eligible clinician reports applicable measures under the quality

performance category through the use of CEHRT, treat the MIPS eligible clinician as satisfying the CQMs reporting requirement under section 1848(o)(2)(A)(iii) of the Act for such year. To encourage the use of CEHRT for quality improvement and reporting on measures under the quality performance category, we established a scoring incentive for MIPS eligible clinicians who use their CEHRT systems to capture and report quality information, specifically the end-to-end electronic reporting bonus points (81 FR 77294 through 77297). We sunset the end-to-end electronic reporting bonus points starting with the CY 2022 performance period (CY 2021 performance period/2023 MIPS payment year was the last performance period in which the end-to-end electronic reporting bonus points were available (85 FR 84907 through 84908)).

With the framework for transforming MIPS through MVPs, we noted in the CY 2021 PFS final rule that we will find ways to incorporate digital measures without needing to incentivize end-to-end electronic reporting with bonus points (85 FR 84907 through 84908). In the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged interested parties to consider electronically specifying their quality measures as eCQMs, to encourage MIPS eligible clinicians, groups, and virtual groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851), bonus points were created as transition policies which were not meant to continue through the duration of the program. Since the inception of MIPS, our intention has been to encourage the utilization of CEHRT, which encompasses the requirement of CEHRT pertaining to eCQM data submission.

With the sunset of the end-to-end electronic reporting bonus points, there is ambiguity regarding the requirement of utilizing CEHRT for the data submission of eCQMs. While the sunset of the end-to-end electronic reporting bonus points was merely to eliminate such bonus points, our intention was to continue the requirement of utilizing CEHRT for eCQM data submission. However, with the sunset of the end-to-end electronic reporting bonus points, there is an inadvertent absence in policy that would continue the requirement of utilizing CEHRT for

eCQM data submission. As a result of such inadvertent absence of policy establishing the overarching CEHRT requirements for eCQM data submission for purposes of the quality performance category (aside from the CEHRT requirements under the end-to-end electronic reporting bonus point criteria), we are rectifying the issue by establishing the requirement to utilize CEHRT for the data submission of eCQMs. We are proposing to establish the quality performance category data submission criteria for eCQMs that requires the utilization of CEHRT in § 414.1335(a)(1). Specifically, in § 414.1335(a)(1)(i)(A) and (ii)(A), we are proposing that the data submission criteria for eCQMs requires the utilization of CEHRT, as defined in § 414.1305. Furthermore, we are proposing to amend the definition of CEHRT in § 414.1305(2)(ii) by broadening the applicability of the health IT certification criteria identified in 42 CFR 170.315 that are necessary to report objectives and measures specified under MIPS (would no longer be limited to the Promoting Interoperability performance category). As a result of this proposal, the health IT certification criteria identified in § 414.1305(2)(ii) would be applicable, where necessary, for any MIPS performance category, including the criteria that support eCQMs identified in § 414.1305(2)(ii)(B).

We note that the proposal pertaining to the data submission criteria for eCQMs requiring the utilization of CEHRT would not require third party intermediaries that report eCQMs on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to obtain certification. Currently, third party intermediaries may facilitate reporting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for an eCQM while not having been certified to the certification criteria at 45 CFR 170.315(c)(1) through (3). However, if a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity is relying on a third party intermediary for elements of the required certification capabilities for the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to meet the CEHRT definition applicable for their participation, then the third party intermediary would need to provide the

MIPS eligible clinician, group, virtual group, subgroup, or APM Entity with a certified Health IT Module for the needed capability or capabilities.

We note that the definition of CEHRT in § 414.1305 references several certification criteria in the ONC Health IT Certification Program for clinical quality measurement, including: “Clinical quality measures (CQMs) — record and export” (45 CFR 170.315(c)(1)), as part of the 2015 Base EHR definition in 45 CFR 170.102; “Clinical quality measures (CQMs) — import and calculate” (45 CFR 170.315(c)(2)); “Clinical quality measures (CQMs) — report” (45 CFR 170.315(c)(3)); and, optionally, “Clinical quality measures (CQMs) — filter” (45 CFR 170.315(c)(4)). Under this proposal, at a minimum, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity would need to utilize technology certified to the criteria at 45 CFR 170.315(c)(1) through (3) to report on eCQMs. We reiterate that certified Health IT Modules meeting these criteria are not required to be provided by the same health IT developer; a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity may use Health IT Modules to meet the certification requirements provided by more than one developer. For example, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity could use certified health IT meeting the criteria in 45 CFR 170.315(c)(1) and (c)(2) provided as part of their EHR system while a third party intermediary that supports reporting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity could supply a Health IT Module that meets the criterion in 45 CFR 170.315(c)(3) to generate a measure report and thus, enable a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to meet the requirement to use CEHRT for eCQMs.

Lastly, we are proposing to establish data submission criteria for the Medicare CQM collection type (as proposed under the APP in section III.G.2. of this proposed rule) in § 414.1335(a)(4). Specifically, in § 414.1335(a)(4)(i), we are proposing that the data submission criteria pertaining to Medicare CQMs would be met by, a MIPS eligible clinician, group, and

APM Entity reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP.

We seek public comment on the proposals regarding the technical amendments that pertain to the data submission criteria for MIPS quality measures and the establishment of data submission criteria for Medicare CQMs.

(ii) Data Submission Criteria for the CAHPS for MIPS Survey Measure

The CAHPS for MIPS Survey measures patients' experience of care within a group, virtual group, subgroup, and APM Entity, including Shared Savings Program ACOs. The survey measures ten dimensions of patient experience of care, known as summary survey measures, for which patients may be the best, if not only source of information. The CAHPS for MIPS Survey is optional for all groups, virtual groups, subgroups, and APM Entities of 2 or more eligible clinicians reporting via traditional MIPS or MIPS Value Pathways (MVPs), and is required for Shared Savings Program ACOs reporting via the APM Performance Pathway (APP).

(A) Require the Administration of the CAHPS for MIPS Survey in the Spanish Translation

We have created official translations of the CAHPS for MIPS Survey in 7 languages, including Spanish, Cantonese, Korean, Mandarin, Portuguese, Russian, and Vietnamese, in addition to the required administration of English survey. However, use of these translations is generally voluntary, with the exception of the requirement to administer the Spanish translation of the CAHPS for MIPS Survey for patients residing in Puerto Rico. Groups, virtual groups, subgroups, and APM Entities that elect CAHPS for MIPS Survey must contract with a CMS-approved survey vendor to administer the CAHPS for MIPS Survey, and must request survey translations for the vendor to administer the CAHPS for MIPS Survey in an optional language. Generally, the CAHPS for MIPS Survey translations are an additional cost to the groups, virtual group, subgroup, and APM Entities.

Our analysis of historic CAHPS data indicates that the use of survey translations has not been widespread and there is unmet need for access to surveys in the 7 available translations. The analysis of survey translation use by groups and Shared Savings Program ACOs fielding the CY 2021 performance period CAHPS for MIPS Survey indicates that 406 out of 559 organizations have about one percent to 9 percent respondents reporting they speak a language other than English at home, and 141 out of 559 organizations have 10 percent or more respondents reporting they speak a language other than English at home. Among these 141 organizations with 10 percent or more respondents reporting they speak a language other than English at home, 114 organizations have all of their survey responses in English. These data highlight a potential gap in the need for and access to a CAHPS for MIPS Survey translation within at least 20 percent (114 out of 559 organizations) of the groups and Shared Savings Program ACOs administering the 2021 CAHPS for MIPS Survey. For the CAHPS for MIPS Survey, the most common non-English language spoken at home by patients is Spanish. We analyzed data from the U.S. Census Bureau, specifically from the 2021 American Community Survey, and found that Spanish is spoken by 61 percent of those who speak a language other than English at home.³¹¹ Among those age 65 and older who speak a language other than English at home, 49 percent speak Spanish. Requiring groups, virtual groups, subgroups, and APM Entities to administer the CAHPS for MIPS Survey in English and Spanish would therefore address much of the unmet need. The requirement would indirectly require vendors to offer the administration of the Spanish translation of the CAHPS for MIPS Survey, and would increase costs to groups, virtual groups, subgroups, and APM Entities.

We propose to require the administration of the CAHPS for MIPS Survey in the Spanish translation; more specifically, we propose to require groups, virtual groups, subgroups, and APM

³¹¹ U.S. Census Bureau, 2021 American Community Survey, S1603: Characteristics of People by Language Spoken at Home, 2021 American Community Survey 5-Year Estimate Subject Tables. Available at <https://data.census.gov/table?q=S1603&tid=ACST5Y2021.S1603>.

Entities to contract with a CMS-approved survey vendor that, in addition to administering the survey in English, would administer the Spanish translation to Spanish-preferring patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines. Also, we are recommending that groups, virtual groups, subgroups, and APM Entities administer the survey in the other available translations (Cantonese, Korean, Mandarin, Portuguese, Russian, and Vietnamese) based on the language preferences of their patients. The proposal and recommendation would make the survey more accessible to survey respondents who can only respond in Spanish or another available translation, and provide an opportunity to better understand their experiences of care and any disparities in care.

Furthermore, the requirement of the administration of the Spanish translation and the recommendation of utilizing the other translations of the CAHPS for MIPS Survey align with CMS's effort to provide culturally and linguistically appropriate services (CLAS), which are intended to advance health equity, improve quality, and help eliminate health care disparities.³¹² Other CMS-administered CAHPS Surveys, such as the Medicare Advantage and Prescription Drug Plan CAHPS, require the administration of Spanish translation survey. For the fiscal year (FY) 2024 Medicare Hospital Inpatient Prospective Payment System (IPPS) and Long Term Care Hospital (LTCH) Prospective Payment System (PPS) proposed rule, the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program is proposing to require hospitals to collect information about the language that the patient speaks while in the hospital (whether English, Spanish, or another language), and that the official Spanish translation of the Hospital CAHPS Survey be administered to all patients who prefer Spanish (88 FR 27114).

We seek public comment on the proposal to require the administration of CAHPS for MIPS Survey in the Spanish translation. In addition, we are interested in comments from

³¹² Centers for Medicare & Medicaid Services. Achieving Health Equity. Available at <https://www.cms.gov/Outreach-and-Education/MLN/WBT/MLN1857916-OMH-AHE/OMHAHE/ahe/lesson01/09/index.html>.

organizations that administer the CAHPS for MIPS Survey on whether they consider contracting with vendors to administer the survey in one or more of the available survey translations based on the language preferences of patients. If so, we are also interested in learning about the factors that more or less likely affect the administration of survey translations where there is need for one or more of the available translations. These comments may inform future rulemaking.

(d) Data Completeness Criteria

(i) Data Completeness Criteria for Quality Measures, Excluding the Medicare CQMs

As described in the CY 2017 Quality Payment Program proposed rule (81 FR 28188 and 28189), to ensure that data submitted on quality measures are complete enough to accurately assess each MIPS eligible clinician's quality performance, we established a data completeness requirement. Section 1848(q)(5)(H) of the Act provides that analysis of the quality performance category may include quality measure data from other payers, specifically, data submitted by MIPS eligible clinicians with respect to items and services furnished to individuals who are not individuals entitled to benefits under Part A or enrolled under Part B of Medicare. In the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2020 PFS final rule, we also noted that we would increase the data completeness criteria threshold over time (81 FR 77121, 82 FR 53632, and 84 FR 62951). For the CY 2017 performance period/2019 MIPS payment year (first year of the implementation of MIPS), CMS established the data completeness criteria threshold to reflect a threshold of at least 50 percent (81 FR 77125). We increased the data completeness criteria threshold from at least 50 percent to at least 60 percent for the CY 2018 performance period/2020 MIPS payment year (81 FR 77125 and 82 FR 53633) and maintained a threshold of at least 60 percent for the CY 2019 performance period/2021 MIPS payment year (82 FR 53633 and 53634). For the CY 2020 performance period/2022 MIPS payment year, we increased the data completeness criteria threshold from at least 60 percent to at least 70 percent (84 FR 62952). We maintained data completeness criteria threshold of at least 70 percent for the

CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years (86 FR 65435 through 65438). For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, we increased the data completeness criteria threshold from at least 70 percent to at least 75 percent (87 FR 70049 through 70052). We continue to believe that it is important to incrementally increase the data completeness criteria threshold as MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities gain experience with MIPS.

The incorporation of higher data completeness criteria thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, and 87 FR 70049). We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients (82 FR 53632, 86 FR 65436, and 87 FR 70049). The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. A data completeness criteria threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program (82 FR 53632, 86 FR 65436, and 87 FR 70049).

We previously noted concerns raised by interested parties regarding the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinicians' ability to participate and perform well under MIPS (81 FR 77121, 82 FR 53632, 84 FR 62951, and 87 FR 70049). We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the CY 2017 performance period³¹³, it is feasible for eligible clinicians and groups to achieve

³¹³ As described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76.

a higher data completeness criteria threshold without jeopardizing their ability to successfully participate and perform in MIPS.

As MIPS eligible clinicians, groups, and virtual groups have gained experience participating in MIPS, particularly meeting the data completeness criteria threshold over the last 7 years (from CY 2017 performance period to CY 2023 performance period), such experience has prepared MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entity to meet incremental increases in the data completeness criteria threshold. We have maintained a data completeness criteria threshold of at least 70 percent for four years from the CY 2020 performance period to the CY 2023 performance period and as a result, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities had 4 years of a maintained data completeness criteria threshold of at least 70 percent before transitioning to an increased data completeness criteria threshold of at least 75 percent for a 2-year timeframe (CY 2024 and CY 2025 performance periods) with more than 12 months to prepare for an increased data completeness criteria threshold of at least 75 percent before such threshold becomes effective for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

As we assessed the timeframe for increasing the data completeness criteria threshold, we determined that maintaining the data completeness criteria threshold of at least 75 percent for a total of 3 years would provide sufficient time for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to transition to another increase in the data completeness criteria threshold. For the CY 2026 performance period/2028 MIPS payment year, we are proposing to maintain the data completeness criteria threshold of at least 75 percent. This would provide MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities with sufficient time to prepare for an incrementally increase in the data completeness criteria threshold starting with the CY 2027 performance period/2029 MIPS payment year. Therefore, MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities could continue transitioning to

an incrementally increased data completeness criteria threshold of at least 75 percent to at least 80 percent. In establishing data completeness criteria thresholds in advance of an applicable performance period, it is advantageous to delineate the expectations for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, so they can adequately prepare for a transition to higher data completeness criteria threshold, particularly the increase in data completeness criteria threshold to at least 80 percent. Thus, we are proposing to increase the data completeness criteria threshold from 75 percent to 80 percent for the CY 2027 performance period/2029 MIPS payment year.

The use of electronic health records (EHRs) and eQMs can reduce burden associated with meeting higher data completeness standards as the collection of eQM data within the EHR can allow eligible clinicians to report on 100 percent of the eligible population with data in the EHR for a measure. We continue to encourage individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, including small and rural practices, to explore EHR adoption and the reporting of eQMs to reduce burden and technical challenges to ensure data accuracy as we seek to increase the data completeness criteria threshold. Individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities that continue to utilize other means of data collection for MIPS QMs, including the collection of MIPS QM data reported by registries and/or QCDRs, would need have the logic code of their EHRs to be updated to account for the increased data completeness criteria threshold. Increasing the data completeness criteria threshold would not pose a substantial burden to MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, unless they are manually extracting and reporting quality data. However, increasing the data completeness criteria threshold provides for the more accurate assessment of performance.

For the aforementioned reasons, it is important to incrementally increase the data completeness criteria threshold. In this proposed rule, we are proposing to maintain the data

completeness threshold for an additional year before incrementally increasing the data completeness criteria threshold. Specifically, in § 414.1340(a), we are proposing the following data completeness criteria thresholds pertaining to QCDR measures, MIPS CQMs, and eCQMs:

- At paragraph (a)(4), for the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.

- At paragraph (a)(5), for the CY 2027 performance period/2029 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 80 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.

Similarly, in § 414.1340(b), respectively, we are proposing the following data completeness criteria thresholds pertaining to Medicare Part B claims measures:

- At paragraph (b)(4), for the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

- At paragraph (b)(5), for the CY 2027 performance period/2029 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 80 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

Also, for the data completeness criteria pertaining to the quality performance category, we are proposing technical amendments to recognize that a virtual group, subgroup, and APM Entity must meet the data completeness criteria requirements established at § 414.1340(a), (b), and formerly paragraph (d), new paragraph (e) due to the proposal to establish the data completeness criteria for the new collection type, Medicare CQM, in § 414.1340(d) as discussed in the following section, IV.A.4.f.(1)(d)(ii), of this proposed rule.

We seek public comment on these proposals.

(ii) Data Completeness Criteria for the Medicare CQMs

As we propose to establish a new collection type, the Medicare CQMs specific to the APM Performance Pathway (APP) as described in section III.G.2. of this proposed rule, we are also proposing to establish the data completeness criteria thresholds for the Medicare CQMs. Specifically, in § 414.1340(d), respectively, we are proposing the following data completeness criteria thresholds pertaining to Medicare CQMs:

- At paragraph (d)(1), for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years, an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as proposed to be defined at § 425.20, who meet the measure's denominator criteria.

- At paragraph (d)(2), for the CY 2027 performance period/2029 MIPS payment year, an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 80 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as proposed to be defined at § 425.20, who meet the measure's denominator criteria.

We are proposing to establish the aforementioned data completeness criteria thresholds for the Medicare CQMs collection type in advance of the applicable performance periods. We recognize that it is advantageous to delineate the expectations for ACOs as they prepare to meet the quality reporting requirements for the Medicare CQMs collection type under the APP. We will assess the availability of the Medicare CQMs as a collection type under the APP during the initial years of implementation and determine the timeframe to sunset the Medicare CQM as a collection type in future rulemaking.

(e) Selection of MIPS Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding to the list, as appropriate, new measures; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2023 PFS final rule (87 FR 70250 through 70633), CY 2022 PFS final rule (86 FR 65687 through 65968); CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). We are proposing changes to the MIPS quality measure set, as described in Appendix 1 of this proposed rule, include the following: the addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the CY 2024 performance period, we are proposing a measure set of 200 MIPS quality measures in the inventory.

The new MIPS quality measures that we are proposing to include in MIPS for the CY 2024 performance period and future years can be found in Table Group A of Appendix 1 of this proposed rule. For the CY 2024 performance period, we are proposing 14 new MIPS quality measures, which includes one composite measure; and 7 high priority measures, of which 4 are also patient-reported outcome measures.

In addition to the establishment of new individual MIPS quality measures, we develop and maintain specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. We are proposing modifications to existing specialty sets and new specialty sets as described in Table Group B of Appendix 1 of this proposed rule. Specialty sets may include: new measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 3, 2023, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 8 of MIPS under the Quality Payment Program.³¹⁴ These recommendations were based on the MIPS quality measures finalized in the CY 2022 PFS final rule and the 2022 Measures Under Consideration List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with were proposed in this proposed rule.

³¹⁴ Message to the Quality Payment Program listserv on January 3, 2023, entitled: “The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2024 Performance Year of the Merit-based Incentive Payment System (MIPS).”

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as described in Tables Group A and Group B of Appendix 1 of this proposed rule, we refer readers to Table Group C of Appendix 1 of this proposed rule for a list of quality measures and rationales for measure removal. We have previously specified certain criteria that will be used when we are considering the removal of a measure (81 FR 77136 and 77137; 83 FR 59763 through 59765; 84 FR 62957 through 62959). For the CY 2024 performance period, we are proposing to remove 12 MIPS quality measures and partially remove 3 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs. We refer readers to Table Group DD of Appendix 1 of this proposed rule for further information regarding the proposals to retain such measures for retention for use in relevant MVPs. Of the 12 MIPS quality measures proposed for removal, the following pertains to such measures: 2 MIPS quality measures are duplicative to a proposed new MIPS quality measure; 3 quality measures are duplicative of current measures; 5 MIPS quality measures that are under the topped-out lifecycle; one measure is extremely topped out; and one MIPS quality measure is constructed in a manner that makes it difficult to attribute the quality action to the clinician, which creates burden. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (*see*, for example, 83 FR 59763 through 59765). The proposal to remove the quality measures described in Table Group C of the this proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the quality measures to determine whether they meet our removal criteria.

Also, we are proposing substantive changes to several MIPS quality measures, which can be found in Table Group D of Appendix 1 of this proposed rule. We have previously established criteria that would apply when we are considering making substantive changes to a quality

measure (81 FR 77137, and 86 FR 65441 through 65442). We are proposing substantive changes to 59 MIPS quality measures, which includes 3 MIPS quality measures proposed to be retained for utilization under MVPs (we refer readers to Table Group DD of Appendix 1 of this proposed rule for such measures that are proposed for retention for use in relevant MVPs). On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive.

Lastly, we are proposing substantive changes to the CMS Web Interface measures that are available as a collection type and submission type for the Medicare Shared Savings Program ACOs meeting reporting requirements under the APP. The substantive changes to the CMS Web Interface measures can be found in Table Group E of Appendix 1 of this proposed rule.

We seek public comment on the proposals to modify the quality performance category measure set, a measure set of 200 MIPS quality measures in the inventory for the CY 2024 performance period, which includes the following:

- Implementation of 14 new MIPS quality measures: one composite measure; and 7 high priority measures, of which 4 are also patient-reported outcome measures;
- Removal of 12 MIPS quality measures: 2 quality MIPS measure are duplicative to a proposed new quality measure; 3 MIPS quality measures are duplicative to current quality measures; 5 MIPS quality measures are under the topped-out lifecycle; one MIPS quality measure is extremely topped out; and one MIPS quality measure is constructed in a manner that makes it difficult to attribute the quality action to the clinician, which creates burden;
- Partial removal of 3 MIPS quality measures: 3 MIPS quality measures removed from traditional MIPS and retained for use in MVPs; and
- Substantive changes to 59 MIPS quality measures.

(2) Cost Performance Category

Section 1848(q)(2)(A) of the Act includes resource use as a performance category under the MIPS. We refer to this performance category as the cost performance category. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS are used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the cost performance category.

In this proposed rule, we are proposing to add five new episode-based measures to the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. These five measures are: Depression, Emergency Medicine, Heart Failure, Low Back Pain, and Psychoses and Related Conditions. We are proposing that MIPS eligible clinicians must meet or exceed a minimum of 20 cases for each of these measures to be assessed on such measure, and we are seeking comments on our interpretation of the language on the case minima codified at § 414.1350(c). We are also proposing to remove the Simple Pneumonia with Hospitalization episode-based measure from the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. Finally, we are proposing to add the five new episode-based measures and remove the Simple Pneumonia with Hospitalization episode-based measure from the operational list of care episode and patient condition groups and codes.

For a description of the statutory basis for and existing policies pertaining to the cost performance category, we refer readers to § 414.1350 and the CY 2017 Quality Payment Program final rule (81 FR 77162 through 77177), CY 2018 Quality Payment Program final rule (82 FR 53641 through 53648), CY 2019 PFS final rule (83 FR 59765 through 59776), CY 2020 PFS final rule (84 FR 62959 through 62979), CY 2021 PFS final rule (85 FR 84877 through 84881), CY 2022 PFS final rule (86 FR 65445 through 65461), and CY 2023 PFS final rule (87 FR 70055 through 70057).

(a) Addition of Episode-Based Measures

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. There are currently 25 cost measures in the cost performance category for the CY 2023 performance period/2025 MIPS payment year, comprising of 23 episode-based measures covering a range of conditions and procedures and two population-based measures. We worked with the measure development contractor to identify the proposed five new episode-based measures for development through empirical analyses and public comment. These proposed measures cover clinical topics and MIPS eligible clinicians currently with limited or no applicable cost measures. As such, these proposed measures would help fill gaps in the cost performance category's measure set. In addition, these proposed measures would support the transition from traditional MIPS to MIPS Value Pathways (MVPs) by allowing for new MVPs to be created and enhancing existing MVPs. Further, the addition of these proposed measures would address interested parties' feedback about the need for more clinically refined episode-based measures in the cost performance category. This proposal would also increase the cost coverage of care episode and patient conditions groups, moving closer towards the statutory goal of covering 50 percent of expenditures under Medicare Parts A and B, as specified under section 1848(r)(2)(i)(I) of the Act.

At a high level, episode-based measures represent the cost to Medicare and beneficiaries for the items and services furnished during an episode. They aim to compare MIPS eligible clinicians on the basis of the cost of care that is clinically related to their treatment and management of a patient and provided during the episode's timeframe. Specifically, for such measures, we define and measure the cost of care for the episode based on the allowed amounts on Medicare claims, which include both Medicare trust fund payments and any applicable beneficiary deductible and coinsurance amounts. The cost of care for these measures includes

amounts paid under Medicare Parts A and B, and, on a case-by-case basis, Medicare Part D that have been standardized to remove price variation from non-clinical factors. The Parts A and B payment standardization methodology and the Part D payment standardization methodology are available at <https://resdac.org/articles/cms-price-payment-standardization-overview>.

Information about how the Part D standardization methodology incorporates rebates into standardized amounts is available at <https://www.cms.gov/files/document/2023-part-d-rebate-methodology.pdf>. We refer the readers to section IV.A.4.f.(2)(a)(iii) of this proposed rule for more information on the five episode-based measures we are proposing.

In this proposed rule, we provide detail about the new measures that we are proposing to include in the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. In section IV.A.4.f.(2)(a)(ii) of this proposed rule, we summarize the timeline for development of these proposed measures, including engagement activities undertaken by the measure development contractor. In section IV.A.4.f.(2)(a)(iii) of this proposed rule, we summarize the proposed new measures that would be included in the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. For the proposed Emergency Medicine episode-based measure, we provide detail about the measure's construction, which evaluates a MIPS eligible clinician's or clinician group's risk-adjusted cost of care to Medicare for patients who receive treatment in the Emergency Department (ED) setting. In section IV.A.4.f.(2)(b) of this proposed rule, we discuss our proposal that MIPS eligible clinicians must meet or exceed a minimum of 20 cases for each of these proposed measures to be assessed on such measure and request comments on our interpretation of case minima regulatory language.

(ii) Overview of Measure Development Process for New Episode-Based Measures

In this section, we describe the development process for the five proposed episode-based measures.

Development of episode-based measures for the cost performance category must comply with the statutorily required processes set forth in section 1848(r) of the Act. We note that the measure developer uses a “wave” approach to indicate cycles of measure development where clinical expert panels convene to select episode groups to develop into cost measures and to provide input on the measures’ specifications. All five of the proposed measures have been developed with extensive engagement from interested parties, including clinicians, persons with lived experience, and the general public. The term “persons with lived experience,” as used in this section IV.A.4.f.(2) of this proposed rule, refers to persons and family of persons who have experienced these conditions or diseases. Our approach to engagement is outlined in the CY 2018 Quality Payment Program final rule (82 FR 53644 through 53645), the CY 2019 PFS final rule (83 FR 59767 through 59769), and the CY 2022 PFS proposed rule (86 FR 39396 through 39397). These processes have been refined over time to incorporate feedback from interested parties, such as to extend the development timeline from 12 months in Wave 2 to 18 months in Waves 3 and 4, and to integrate bidirectional conversations between persons with lived experience and clinical experts.

Four of these measures began development in 2020 in Wave 4 of development, and one of these measures has been in development and refinement since 2018 (as part of Wave 2 of measure development). Specifically, the Depression, Emergency Medicine, Heart Failure, and Low Back Pain episode-based measures were developed in the Wave 4 cycle of measure development through an 18-month process. As a first step, the measure development contractor held a public comment period from December 2020 through February 2021 to gather feedback on which clinical areas to prioritize for development. During the public comment period, the measure developer received 36 comments on the candidate episode groups for development in Wave 4. This feedback, in conjunction with empirical testing by the measure development contractor, was used to inform the decision to develop these specific clinical areas - depression,

emergency medicine, heart failure, and low back pain – into episode-based measures. The summary of the public comments is available in this document

<https://www.cms.gov/files/document/wave-4-public-comment-summary.pdf>.

Following our decision to develop measures for depression, emergency medicine, heart failure, and low back pain, the measure development contractor convened four clinician expert panels, comprised of a total of 73 members, affiliated with 63 organizations and specialty societies. Each panel also incorporated the perspective of persons with lived experience following a new approach where their input is collected via structured focus groups, interviews or surveys, and then summarized and presented to the clinical expert panels.

Then, the measure development contractor held a national field testing period from January 14, 2022 to March 25, 2022. During this field testing period, MIPS eligible clinicians and clinician groups meeting a minimum threshold of episodes for each measure could review field test reports and an episode-level file with detailed information to understand the types of services that comprise a large or small share of their episode costs. Supplemental materials, such as testing information on measures, a Frequently Asked Questions document, and mock field test reports were posted publicly for interested parties' review. The measure development contractor gathered all feedback via a survey and a summary of this feedback from the field testing period is available at *<https://www.cms.gov/files/document/2022-field-testing-feedback-summary-report.pdf>*.

The measure development contractor also has a standing technical expert panel (TEP), composed of 20 members from different clinical areas, academia, health care and hospital administration, and persons with lived experience, which provides overarching input on cross-measure topics, such as testing approaches and methodology. For example, the TEP discussed challenges in developing chronic condition episode-based measures and ways that the framework can address those challenges, provided feedback on the attribution rules (that is, the algorithms

and the types of codes used in each algorithm) that would demonstrate a relationship between a clinician group and a patient with a chronic condition(s), and discussed service assignment, risk adjustment, and exclusions. This input helped inform the specifications for the chronic condition episode-based measure framework, which serves as the framework for three of the chronic condition episode-based measures (that is, Depression, Heart Failure, and Low Back Pain episode-based measures) developed in Wave 4 and being proposed in this proposed rule.

Separately from the other four proposed measures, the Psychoses and Related Conditions measure originally had begun development in 2018 as part of Wave 2, alongside 10 other episode-based measures. However, this measure has not yet been implemented in the cost performance category. During the 2018 through 2019 measure development cycle, a convened clinical expert workgroup met four times to provide detailed input on the measure and the measure was field tested as part of the field testing period in 2018. The summaries of the workgroup webinars as well as the comments received on the original version of the measure during field testing are available on the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

We included the Psychoses and Related Conditions measure in the “2018 Measures Under Consideration List” (<https://www.cms.gov/files/document/2018rmuc-listclearancerpt.pdf>) and the Measure Application Partnership (MAP) reviewed the measure during the 2018-2019 review cycle. In December 2018, the MAP Clinician Workgroup provided the Psychoses and Related Conditions episode-based measure a preliminary recommendation of “Conditional support for rulemaking,” on the condition of endorsement by a consensus-based entity (CBE). In January 2019, the MAP Coordinating Committee overturned the MAP Clinician Workgroup’s recommendation and voted to replace it with a recommendation of “Do not support for rulemaking.” The MAP Coordinating Committee’s concerns with the Psychoses and Related

Conditions measure related to: (1) the measure's attribution model and its potential to hold clinicians responsible for costs outside of their influence; (2) geographic variation in community resource availability; (3) effects of physical comorbidities on measure score; and (4) the potential to exacerbate access issues in mental health care. For more detail please refer to the final report at

http://www.qualityforum.org/Publications/2019/03/MAP_Clinicians_2019_Considerations_for_Implementing_Measures_Final_Report.aspx.

In the CY 2020 PFS proposed rule (84 FR 40760), we responded to the MAP Coordinating Committee's concerns, as we believed that these concerns had already been addressed through the development and testing processes, and solicited comments as part of the request for information (RFI) on the potential use of the original draft version of the Psychoses and Related Conditions episode-based measure in the cost performance category in a future MIPS performance period.

The measure development contractor considered the MAP Coordinating Committee's comments and responses to the RFI that we received when refining the Psychoses and Related Conditions measure in 2021-2022. In October 2021, the measure developer reconvened the Psychoses and Related Conditions Clinical Expert Workgroup to consider measure refinements to address concerns, noting that the measure concept continued to be important as it would encourage value in mental health care. The details of these refinements are outlined in section IV.A.4.f.(2)(a)(iii) of this proposed rule. Then, the measure development contractor field tested the Psychoses and Related Conditions measure alongside the other four proposed new episode-based measures discussed previously in this section of the proposed rule. The feedback received during field testing was further discussed by the Psychoses and Related Conditions Clinical Expert Workgroup in April 2022.

More information about the measure development and interested parties engagement process for the five proposed episode-based measures for inclusion in the cost performance category is available in materials on the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>. Summaries of the public comment period and clinician expert workgroup meetings organized by the measure development contractor are also available on the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

Similar to previous years, the measure development contractor has continued to engage clinicians and interested parties through the standing TEP, public comment periods, measure-specific Clinical Expert Workgroups, Person and Family Engagement opportunities, and national field testing, as well as conduct extensive education and outreach activities. For more information on the methods through which the measure development contractor gathered expert input during measure development and other interested parties engagement activities, please refer to the “2023 Summary of Cost Measures” document that is available at <https://www.cms.gov/files/document/2023-mips-summary-cost-measures.pdf>.

After these extensive measure development and refinement activities, we included the five proposed episode-based measures on our 2022 Measures Under Consideration (MUC) List (available for download at <https://mmshub.cms.gov/sites/default/files/2022-MUC-Lst.xlsx>) to be considered for potential use in MIPS. The MAP reviewed the measures during the 2022-2023 review cycle. This process involved reviews by the MAP Health Equity and MAP Rural Health Advisory Groups, as well as two public comment periods. In December 2022, the MAP Clinician Workgroup discussed the measures, taking into consideration the input from the MAP Health Equity and MAP Rural Health Advisory Groups and the public comments. The MAP Clinician Workgroup reached consensus to conditionally support all five episode-based measures for

rulemaking, pending the endorsement of the measures by a CBE. The MAP Clinician Workgroup's concerns related to the inclusion of Medicare Part D covered items and services in certain measures, potential unintended consequences of assessing costs related to mental health care, appropriateness of the attribution methodology, and request for additional detail on testing into adjusting for social determinants of health (for example, geographic location and socioeconomic status) and evidence of care stinting. In January 2023, the MAP Coordinating Committee upheld the MAP Clinician Workgroup's preliminary recommendation. More information about these recommendations is available in the 2022-2023 MAP Final Recommendations document at

<https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&itemID=98102>.

We believe that the concerns raised regarding these proposed measures have been addressed during measure development and the MAP meetings. Additionally, some interested parties recognized the importance of these measures, specifically highlighting the importance of episode-based measures assessing mental health care. We agree with these interested parties. On these bases, we are proposing all five of these episode-based measures for inclusion in the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year.

(iii) New Episode-Based Measures Beginning with the CY 2024 Performance Period/2026 MIPS Payment Year

In this section of this proposed rule, we discuss the five new episode-based measures, which we propose to add to the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year.

In conjunction with our measure development contractor, we developed these measures with consideration of the common standards that are described in the CY 2022 PFS final rule (86 FR 65455 through 65459) to ensure consistency across episode-based measures being developed.

Specifically, the CY 2022 PFS final rule requires that any episode-based measure for the cost performance category include the following: (1) episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment. The five new episode-based measures we are proposing meet all requirements described in CY 2022 PFS final rule, including these features. We provide more information on the specific requirements for each of the proposed episode-based measures later in this section of the proposed rule.

Generally, for all episode-based measures, we exclude episodes where costs cannot be fairly compared to the costs for the whole cohort in the episode-based measure. These exclusions, like other features of each episode-based measure, are developed with extensive clinician and interested parties' engagement. We have specified exclusions for all five proposed episode-based measures, and discuss certain exclusions for the Psychoses and Related Conditions and the Emergency Medicine measure in further detail in this section of this proposed rule.

Generally, we also apply a risk adjustment model to all episode-based measures in the cost performance category. The model includes standard risk adjustors that are applied to all episode-based measures (for example, CMS Hierarchical Condition Category [HCC] variables, comorbidities, age brackets, disability status, ESRD status), and measure-specific risk adjustors (for example, patient transfers from another setting for the Emergency Medicine measure). We assess the risk adjustment model at the level of each stratification to ensure that only like patients are compared to each other. The risk adjustment model we use in development of the cost performance category's episode-based measures is described in greater detail in CY 2019 PFS final rule (83 FR 59767 through 59773). As mentioned previously in this section, all five proposed episode-based measures have been risk adjusted in accordance with this model.

More information on the episode-based measure development requirements, which were outlined so that external interested parties could develop measures in the future, are available in the Blueprint for the CMS Measures Management System

(<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>) and the Meaningful Measures Framework (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page>).

The episode-based measures that we are proposing for CY 2024 performance period/2026 MIPS payment year and future performance periods are listed in the Table 43.

TABLE 43: Proposed Episode-Based Measures Beginning with CY 2024 Performance Period/CY 2026 MIPS Payment Year

Measure Name	Episode Type
Depression	Chronic condition
Emergency Medicine	Care Setting
Heart Failure	Chronic condition
Low Back Pain	Chronic condition
Psychoses and Related Conditions	Acute inpatient medical condition

The three chronic condition episode-based measures assess outpatient treatment and ongoing management of the following chronic conditions: depression, heart failure, and low back pain. The measure construction for these three proposed measures follows the approach described in the CY 2022 PFS final rule (86 FR 65445 through 65461), which also includes detailed discussion of the attribution methodology and examples of how episodes are attributed.

The attribution methodology that identifies a clinician-patient care relationship is slightly different at the clinician group and individual MIPS eligible clinician levels, to reflect that care provided at the clinician group and individual MIPS eligible clinician levels, respectively. At a high level, these proposed chronic condition episode-based measures attribute episodes to the clinician group that renders services that constitute a trigger event, which is identified by the occurrence of two claims billed in close proximity by the same clinician group. Both claims must

have a diagnosis code indicating the same chronic condition related to the specific episode-based measure. For example, for the Heart Failure measure, both claims of the trigger event must have a diagnosis indicating heart failure. The services that trigger an event for these chronic condition episode-based measures are identified first by Evaluation and Management (E/M) codes for outpatient services, and then by a second claim with either another E/M code for outpatient services or a condition-related Current Procedural Terminology (CPT)/ Healthcare Common Procedure Coding System (HCPCS) code (CPT/HCPCS) related to the treatment or management of the chronic condition. The trigger event opens a year-long attribution window from the date of the initial E/M outpatient service, during which the same clinician group could reasonably be considered responsible for managing the patient's chronic condition. If we see evidence that the relationship is ongoing, represented by another E/M or condition-related procedure code that we refer to as the reaffirming claim, then this window can be extended.

For individual MIPS Eligible clinicians, we would attribute episodes to each individual MIPS eligible clinician within an attributed clinician group that renders at least 30 percent of trigger or reaffirming codes on Part B Physician/Supplier claim lines during the episode, such as office visits or diagnostic services. We also apply conditions to ensure the MIPS eligible clinicians to whom the episode is attributed are reasonably responsible for the management of the patient's chronic condition. Specifically, the MIPS eligible clinician must have provided condition-related care to this patient prior to or on the episode start date.

Additionally, we use the provider-level prescription billing patterns to ensure that we are capturing the MIPS eligible clinicians directly involved in providing ongoing chronic care management, rather than clinicians who might have only refilled a patient's prescription once, as a courtesy to the patient. Specifically, for some measures (that is, Diabetes, Asthma/COPD episode-based measure that were finalized for use in the MIPS cost performance category for the

CY 2022 PFS final rule (86 FR 64996), and Heart Failure episode-based measure that is being proposed in this rule.

The Psychoses and Related Conditions measure is an acute inpatient medical condition episode-based measure, which focuses on patients hospitalized for schizophrenia, delusional disorders, brief psychotic disorder, schizoaffective disorder, manic episode with psychotic symptoms, bipolar disorder with psychotic symptoms, major depressive disorder with psychotic symptoms, or unspecified psychosis. This acute inpatient medical condition was developed in accordance with the previously established framework for episode-based measures, which we described in detail in the CY 2019 PFS final rule (83 FR 59769 through 59771). We selected the Psychoses and Related Conditions measure for development because empirical analyses have identified psychoses-related hospitalizations are one of the most common inpatient stays, so it has a strong potential to be impactful on Medicare spending. This measure would also contribute to filling the current identified gap in the cost performance category's measurement of mental health care, as currently there are no episode-based or other cost measures assessing this clinical area.

As noted in the previous section of this proposed rule, the Psychoses and Related Conditions measure has been refined since the RFI in CY 2020 PFS proposed rule (84 FR 40760 through 40761) considering expert and other interested parties' input and to further address the MAP Coordinating Committee's previously expressed concerns in the 2018-2019 measure development cycle about the ability of inpatient clinicians to affect post-discharge care. In response to this input and these concerns, we implemented three refinements of this measure. First, we reduced the length of the episode window reduced from 90 to 45 days. This shortened episode window helps to ensure that MIPS eligible clinicians can reasonably be held accountable for post-discharge care, while still capturing readmissions and ED visits shortly after the trigger event, which persons with lived experience had noted as being important outcomes to identify

and measure because these outcomes could be avoided with better discharge planning and follow-up care. Second, we refined this measure's specifications to account for specific scenarios where MIPS eligible clinicians have limited ability to influence a patient's care. Specifically, this measure now excludes episodes with involuntary holds at admission and episodes which are transfers to State hospitals. Third, we refined this measure's specifications to risk adjust for facility type to account for differences in payment policies between Inpatient Prospective Payment System (IPPS) and Inpatient Psychiatric Facility (IPF) hospitals. While we continue to believe that the original measure had accounted for concerns about the ability of inpatient clinicians to influence costs after discharge as described in the CY 2020 PFS proposed rule (84 FR 40760 through 40761), we also believe that these changes further refine the measure to meaningfully assess costs related to the role of clinicians caring for patients during mental health hospitalizations.

The Emergency Medicine measure assesses the cost of care clinically related to the treatment of a patient during an ED visit. The intent of this measure is to comprehensively assess all types of care in an ED, so the construction of the measure reflects the goal of capturing this broad scope of care. As such, this measure is characterized as a "care setting" episode type.

A CPT/HCPCS code indicating that a clinician has furnished care in the ED setting triggers the Emergency Medicine measure. The clinician billing the trigger code is attributed the episode. A clinician group is attributed by aggregating all episodes attributed to clinicians that bill to the clinician group. The trigger code also opens a 14-day episode window, during which the attributed clinician is responsible for costs.

The Emergency Medicine measure stratifies episodes based on the type of care the patient received during their ED visit and by disposition status. First, episodes are divided into 28 mutually exclusive groups called ED visit types that characterize the focus of care a patient received during their visit. These represent more granular, exhaustive patient populations defined

by clinical criteria including the three-digit diagnosis codes available on a patient's ED visit claims, as well as a Medicare Severity Diagnosis Related Group (MS-DRG) of a subsequent inpatient stay if present. Given the goal of the Emergency Medicine measure to capture the broader universe of care provided in the emergency setting, dividing this measure's episodes into ED visit types is a technique to ensure clinical comparability. Examples of a few of the most frequent ED visit types associated with this Emergency Medicine measure are respiratory, gastrointestinal or liver, and kidney and urinary conditions. The 28 ED visit types are further stratified by whether (1) the ED visit resulted in subsequent observation care or inpatient admission or (2) the patient was discharged without subsequent observation care or inpatient admission. For example, ED visits for a stroke which end in discharge are only compared with other ED visits for a stroke that also end in discharge.

The Emergency Medicine measure includes all Medicare Parts A and B services during the 14-day episode window, except for certain services determined to not be clinically relevant to the ED visit type. This reflects the intent of the measure and the broad clinician role in the ED setting. The ED visit type associated with the specific episode determines whether a service is clinically unrelated and therefore excluded from the episode. For example, if a patient visits the ED for ear, nose and throat (ENT) and eye disorders, any subsequent services for psychoses or behavioral and developmental disorders are excluded. However, if a patient visits the ED to receive care for an altered mental state, these subsequent services for psychoses or behavioral and developmental disorders are not excluded.

The Emergency Medicine measure risk adjusts costs just like all other episode-based measures. This measure uses the standard risk adjustment model described previously in this section. Also, as discussed, we assessed the risk adjustment model at the level of each stratification. This means that for the Emergency Medicine measure, the risk adjustment is applied to each combination of ED visit type and disposition status. For example, the risk

adjustment model would assess separately a kidney and urinary episode that resulted in an inpatient stay, a kidney and urinary episode that resulted in a discharge, a fracture episode that resulted in an inpatient stay, and a fracture episode that resulted in a discharge.

Similar to other episode-based measures in use in the cost performance category and the episode-based measures proposed in this rule, we exclude episodes in cases where costs cannot be fairly compared to the costs for the whole cohort in the Emergency Medicine measure. For example, episodes are excluded for patients transferred to another ED facility from the triggering ED facility.

The proposed specifications for all five proposed episode-based measures are available at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Give-Feedback>. The specifications documents for each proposed measure consist of a methods document that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides detailed methodology describing each step to construct the measure, including: identifying patients receiving care, defining an episode-based measure, attributing episodes to MIPS eligible clinicians and clinician groups, assigning costs, defining exclusions, risk adjusting, and calculating measure score. Second, the measure codes list file contains the codes used in the measure specifications, including the episode triggers, attribution, stratification, assigned items and services, exclusions, and risk adjustors.

More information about the five proposed episode-based measures is available in the measure justification forms, which provide a comprehensive characterization of the measures, their justification, and testing results of these measures' specifications. These documents are available through the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

We are seeking public comment on our proposal to add the five episode-based measures, which are listed in Table 43.

(b) Reliability and Case Minimum

In this section of the proposed rule, we discuss the proposed case minima to use for the five proposed episode-based measures and provide clarification on the interpretation of our regulation at § 414.1350(c) regarding the case minima for episode-based measures. Specifically, we propose a 20-episode case minimum for each of the five proposed measures based on our analysis of the reliability of each measure. We also provide clarification regarding application of our regulatory language under § 414.1350(c)(4) through (6). Currently, § 414.1350(c)(4) through (6) establishes the case minima for each type of episode-based measure (that is, procedural, acute inpatient medical condition, and chronic condition, respectively) beginning with a certain CY performance period/MIPS payment year specified therein. In this proposed rule, we are clarifying that the case minima established in § 414.1350(c)(4) through (6) applies to both the episode-based measure(s) we specified as beginning in the indicated performance period when the applicable regulatory provision was codified and for all episode-based measures of the same type that we specify to begin in subsequent performance periods, unless we specify otherwise for individual measure(s) in future rulemaking. We also note that, consistent with our past and current practice, we will continue testing the mean reliability of any potential episode-based measures that we propose to adopt in future rulemaking before applying the case minimum established in these regulations, as described later in this section.

Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance (“signal”) rather than random variation (“noise”). Higher reliability suggests that a measure is effectively capturing meaningful differences between clinicians’ performance. However, we continue to caution against using reliability as the sole metric to evaluate a measure because of the tradeoffs between accuracy and reliability, and the role of

service assignment in reducing noise. These and other considerations are detailed in the CY 2022 PFS final rule (86 FR 65453 through 65455). We also note that increasing case minima necessarily reduces the number of clinicians who meet the case minimum for a given measure. Because these are clinically refined measures, we aim to have as many clinicians as possible to be able to have their costs evaluated by them. Therefore, we consider that a mean reliability of 0.4 represents moderate reliability because it accounts for these considerations and is a sufficient threshold to ensure that the measure is performing as intended when assessed in conjunction with other testing.

We previously established at § 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures in the CY 2019 PFS final rule (83 FR 59773 through 59774). We also established at § 414.1350(c)(6) a case minimum of 20 episodes for chronic condition episode-based measures in the CY 2022 final rule (86 FR 65453 through 65455). We have not adopted any care setting episode-based measures in the cost performance category, and therefore we have not established any case minimums for this type of episode-based measures. In this proposed rule, we considered a case minimum of 20 for each of the five proposed episode-based measures and then examined the reliability of the measures against this case minima.

We examined the reliability of the five proposed episode-based measures, and Table 44 presents the percentage of tax identification numbers (TINs) and TIN/National Provider Identifiers (NPIs) that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our proposed case minimum of 20 for each of the episode-based measures. At a 20-episode case minimum, the mean reliability for the proposed Depression, Heart Failure, Low Back Pain, and Psychoses and Related Conditions measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. Similarly, at a 20-episode case minimum, the mean reliability for the proposed

Emergency Medicine measure exceeds 0.4 for both groups and individual clinicians, and all groups and individual clinicians meet the 0.4 reliability threshold.

TABLE 44: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold and TIN and TIN/NPI Mean Reliability

Measure name (case minimum)	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Depression	99.62%	0.87	98.61%	0.80
Emergency Medicine	100.00%	0.91	100.00%	0.78
Heart Failure	91.81%	0.68	86.79%	0.60
Low Back Pain	96.27%	0.75	95.66%	0.73
Psychoses and Related Conditions	100.00%	0.83	100.00%	0.86

We believe that calculating these five proposed episode-based measures with these case minimums will accurately and reliably assess the performance of clinicians and clinician group practices. Therefore, we are proposing to adopt a case minimum of 20 episodes for each of the five proposed new episode-based measures. Given that we have not previously established any case minimums for the care setting episode-based measures, we also propose to codify the 20-episode case minimum for care setting episode-based measures under § 414.1350(c)(7).

Additionally, as we were reviewing our existing regulatory language under § 414.1350(c), we recognized the need to clarify the intended interpretation of the language because we acknowledge that the current framing is open to reasonable interpretation. Specifically, we clarify that the regulatory language at § 414.1350(c)(4) through (6) establishes the case minima for episode-based measures of each episode type (that is, procedural, acute inpatient medical condition, and chronic condition, respectively) such that the case minimum specified therein applies to all episode-based measures of that episode type, regardless of when the measure is adopted for inclusion in the cost performance category, unless otherwise specified for individual measure(s). For example, under § 414.1350(c)(6), the chronic condition episode-based measures that were specified beginning with the CY 2022 performance period/2024 MIPS

payment year when this regulatory provision was codified (that is, the Diabetes and the Asthma/COPD measure) and any chronic condition episode-based measure specified after the CY 2022 performance period/2024 MIPS payment year will have a case minimum of 20 episodes, unless we specify otherwise for an individual measure.

We are proposing to update the regulatory language under § 414.1350(c)(4) through (6) to more clearly reflect this clarification. In addition, we are proposing that this interpretation will also apply to § 414.1350(c)(7) for care setting episode-based measures, which we are proposing under this section of this proposed rule.

We believe that it is appropriate to use case minimum based on the measure type for current and future measures in MIPS, as each measure episode type uses a consistent framework across measures so the case minimum should be also consistent, where possible. Additionally, consistent case minimum simplifies the level of information a MIPS eligible clinician or clinician group must monitor for the episode-based measures as the number of measures used in the cost performance category continues to grow. We note that for any future measure under consideration to be implemented in the cost performance category, case minima would still be evaluated against reliability testing, and could be different from the standard case minima established for the respective measure type under § 414.1350(c), as needed.

We are inviting comment on our proposals in this section IV.A.4.f.(2)(b), including our proposal to adopt these five episode-based measures in the cost performance category proposals and our interpretation of the existing regulatory language on the case minima for episode-based measures.

(c) Removal of Simple Pneumonia with Hospitalization Measure from the MIPS Cost Performance Category Beginning with the CY 2024 Performance Period/2026 MIPS Payment Year

In this section of the proposed rule, we are proposing to remove the Simple Pneumonia with Hospitalization episode-based measure from the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year.

The Simple Pneumonia with Hospitalization episode-based measure was implemented for use in the MIPS cost performance category starting with CY 2019 performance period/2021 MIPS payment year (83 FR 59767 through 59773). Due to the impact of the COVID-19 pandemic, in accordance with § 414.1380(c)(2)(i)(A)(2), we assigned a weight of zero percent to the cost performance category for the CY 2020 performance period/2022 MIPS payment year and CY 2021 performance period/2023 MIPS payment year, and redistributed the prescribed weight to another performance category or categories, as established at § 414.1380(c)(2)(ii)(D). Therefore, no clinician or clinician group was scored on any episode-based measures, including the Simple Pneumonia with Hospitalization episode-based measure, for those 2 years.

For the CY 2022 performance period/2024 MIPS payment year, we announced via email communication (subject: *2021 Quality Payment Program Experience Report and Infographic Now Available; Policy Update: Excluded MIPS Cost Measure for 2022 Performance Period*) on June 12, 2023, that in accordance with § 414.1380(b)(2)(v)(A), we would suppress the Simple Pneumonia with Hospitalization episode-based measure, so that eligible clinicians and clinician groups would not be scored on this measure for that performance period. This is a direct result of the International Classification of Diseases, Tenth Revision (ICD-10) coding updates related to COVID-19 that impacted the underlying population originally intended to be captured by this measure. Specifically, on January 1, 2021, an ICD-10 diagnosis code for pneumonia due to COVID-19 (J12.82) came into effect. Our guidance in the FY 2021 ICD-10-CM Official Guidelines for Coding and Reporting stated that this should be coded as secondary to COVID-19 (U07.1) (<https://www.cms.gov/files/document/2021-coding-guidelines-updated-12162020.pdf>). However, these two diagnosis codes (J12.82 and U07.1) map to different Medicare Severity

Diagnosis Related Groups (MS-DRGs). J12.82 maps to the trigger codes for the Simple Pneumonia with Hospitalization measure (MS-DRGs 193-195, Simple Pneumonia and Pleurisy with MCC, with CC, and without CC/MCC, respectively), while U07.1 maps to Respiratory Infections and Inflammations (MS-DRGs 177-179, Respiratory Infections and Inflammations with MCC, with CC, and without CC/MCC, respectively), which are not used in this measure's trigger codes. That is, while this cost measure should include pneumonia due to COVID-19, it is unable to because it does not use MS-DRGs 177-179 in its trigger logic. For more information on the codes used to trigger Simple Pneumonia with Hospitalization measure episodes and the measure construction steps in general, please refer to the codes list file document available for download from the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

Once sufficient data became available from claims submitted in CY 2022 for our review and analysis, we conducted empirical testing. This empirical testing demonstrated that these coding changes have resulted in a marked decrease in the number of Simple Pneumonia with Hospitalizations episodes. Specifically, we have seen a significant decrease in the number of episodes, by almost half, as a direct result of this coding change. The measure does not use MS-DRGs 177-179 in its trigger logic and, therefore, the measure is unable to capture many pneumonia episodes, per the original measure intent. Empirical testing further showed that this significant decrease has resulted in many clinicians no longer meeting the 20-episode case minimum for attribution of the measure. On these bases, we have excluded the Simple Pneumonia with Hospitalization measure from scoring for the CY 2022 performance period under § 414.1380(b)(2)(v)(A) because (1) these coding changes present a significant change external to care; and (2) these changes impacted calculation of the cost measures such that it

would lead to misleading or inaccurate results, as demonstrated by the empirical analysis described in this section.

Given that these underlying coding issues affect the measure's ability to capture the intended population and that their uneven impact on MIPS eligible clinicians is expected to continue, we are proposing to remove the Simple Pneumonia with Hospitalization measure from the cost performance category beginning with CY 2024 performance period/2026 MIPS payment year. We do not believe that it is appropriate to continue to use the measure as currently specified without any changes to address the coding changes that formed our basis to suppress this measure in the CY 2022 performance period/2024 MIPS payment year. In other words, because we have already determined that the Simple Pneumonia with Hospitalization measure warranted exclusion under § 414.1380(b)(2)(v)(A) because the coding changes lead to misleading or inaccurate results in calculating the measure's score, it would be inappropriate to retain this measure for the CY 2024 performance period/2026 MIPS payment year as currently specified. This will continue to be true while the triggering methodology is specified in a way that is incongruous with billing practices. While we are exploring substantive changes to the measure's triggering methodology in response to the coding changes, the scope of these changes and the potential impacts of these changes on other elements of the measure require careful consideration and feedback from the Simple Pneumonia with Hospitalization Clinician Expert Workgroup and other interested parties prior to implementation. Because of these circumstances, we propose to remove the Simple Pneumonia with Hospitalization measure as it is currently specified from use in MIPS beginning with the CY 2024 performance period/2026 MIPS payment year.

We note that we have been comprehensively re-evaluating the Simple Pneumonia with Hospitalization measure, given the significant coding changes impacting calculation of this measure. The purpose of comprehensive re-evaluation is to ensure that measures continue to meet criteria for importance, scientific acceptability, and usability in line with the CMS

Measures Management System Blueprint (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>). In this process, we holistically review the measure, seek public comment, and consider whether any changes need to be made to measure specifications after a measure has been in use for 3 years. A new version of the measure –Respiratory Infection Hospitalization – may be considered for implementation in MIPS in future years, after undergoing the pre-rulemaking and the notice-and-comment rulemaking processes. For more information on the re-evaluation efforts of the Simple Pneumonia with Hospitalization episode-based measure or other measures, please refer to the documents under the “Wave 1 cost measure comprehensive reevaluation (2022-2023)” section of the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

We are inviting comments on this proposal.

(d) Proposed Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

We are proposing revisions to the operational list of care episode and patient condition groups and codes to reflect the proposal of any new episode-based measures. Section **IV.A.4.f.(2)(d)** of this proposed rule provides context on the statutory requirements for care episode and patient condition groups and proposes changes to the operational list.

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve physicians, practitioners, and other interested parties in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Medicare Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the

Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from interested parties, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list of care episode and patient condition codes as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other interested parties.

For more information about past revisions to the operational list that we made as we developed and proposed episode-based measures, we refer readers to CY 2020 PFS final rule (84 FR 62968 through 62969) and CY 2022 PFS final rule (86 FR 65445 through 65461). The current operational list and prior operational lists is available at the QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

Additionally, as required by section 1848(r)(2)(I) of the Act, information on resource use (or cost) measures currently in use in MIPS, cost measures under development and the time-frame for such development, potential future cost measure topics, a description of engagement with interested parties, and the percent of expenditures under Medicare Parts A and B that are covered by cost measures must be provided on the website of CMS not later than December 31 of each year.

In accordance with section 1848(r)(2)(H) of the Act, we are proposing to revise the operational list beginning with the CY 2024 performance period/2026 MIPS payment year to include five new care episode and patient condition groups, based on input from clinician specialty societies and other interested parties, as discussed in section IV.A.4.f.(2)(a)(ii) of this proposed rule. We propose including Emergency Medicine and Psychoses and Related

Conditions as care episode groups and Heart Failure, Low Back Pain, and Depression as patient condition groups. These care episode and patient condition groups serve as the basis for the five new episode-based measures that we are proposing in section IV.A.4.f.(2)(a)(iii) of this proposed rule for the cost performance category. The codes that define these five care episode and patient condition groups align with the trigger codes of the proposed episode-based measures in section IV.A.4.f.(2)(a)(iii) of this proposed rule. As described in section IV.A.4.f.(2)(a)(ii), these specifications are developed with extensive input from interested parties.

Additionally, we propose to revise the operational list to remove the Simple Pneumonia with Hospitalization care episode group. As discussed in section IV.A.4.f.(2)(c) of this proposed rule, we are proposing to remove this episode-based measure from the cost performance category, so the codes that define this care episode group would no longer need to remain in the operational list.

Our proposed revisions to the operational list are available on our QPP Cost Measure Information page at <https://www.cms.gov/Medicare/Quality-Payment-Program/Quality-Payment-Program/Cost-Measures>.

We are inviting comments on this proposal.

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886), the CY 2022 PFS final rule (86 FR 65462 through 65466), and the CY 2023 PFS final rule (87 FR 70057 through 70061). We also refer readers to 42 CFR 414.1305 for the definitions of improvement

activities and attestation, § 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

We are not proposing any changes to the traditional MIPS improvement activities policies for the CY 2024 performance period/2026 MIPS payment year. We are proposing policies for group reporting in MIPS Value Pathways (MVPs). In addition, we are proposing changes to the improvement activities Inventory for the CY 2024 performance period/2026 MIPS payment year and future years as follows: adding five new improvement activities; modifying one existing improvement activity; and removing three previously adopted improvement activities.

(b) Improvement Activities Inventory

(i) Annual Call for Activities Background

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial improvement activities Inventory consisting of approximately 95 activities (81 FR 77817 through 77831). We took several steps to ensure the Inventory was inclusive of activities in line with statutory and program requirements. We discussed that we had conducted numerous interviews with highly performing organizations of all sizes and had conducted an environmental scan to identify existing models, activities, or measures that met all or part of the improvement activities performance category, including patient-centered medical homes, the Transforming Clinical Practice Initiative (TCPI), CAHPS surveys, and AHRQ's Patient Safety Organizations. In addition, we reviewed the CY 2016 PFS final rule with comment period (80 FR 71259) and the comments received in response to the MIPS and APMs RFI in relation to the improvement activities performance category, which

sought input on what activities could be classified as clinical practice improvement activities according to the definition under section 1848(q)(2)(C)(v)(III) of the Act.

For the CY 2018 performance period/2020 MIPS payment year, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive improvement activities Inventory for the Quality Payment Program CY 2018 performance period/2020 MIPS payment year and future years through subregulatory guidance.³¹⁵ In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for the CY 2019 performance period/2021 MIPS payment year and for future years, we finalized a formal Annual Call for Activities process for the addition of possible new activities and for possible modifications to current activities in the improvement activities Inventory. This process included the requirement to submit a nomination form similar to the one we utilized for the CY 2018 performance period/2020 MIPS payment year (82 FR 53656 through 53659). In order to submit a request for a new activity or a modification to an existing improvement activity, the interested party must submit a nomination form (OMB control # 0938-1314) available at www.qpp.cms.gov during the Annual Call for Activities.

(ii) Changes to the Improvement Activities Inventory

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would establish improvement activities through notice-and-comment rulemaking. We refer readers to Table H in the Appendix to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix to the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), Tables A and B in the Appendix 2 to the CY 2019 PFS final rule (83 FR 60286 through 60303), Tables A, B, and C in the Appendix 2 to the CY 2020 PFS final rule (84 FR 63514 through 63538), Tables A, B, and C in the Appendix 2 to

³¹⁵ CMS, *Annual Call for Measures and Activities: Fact Sheet*, https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf.

the CY 2021 PFS final rule (85 FR 85370 through 85377), Tables A, B, and C in the Appendix 2 to the CY 2022 PFS final rule (86 FR 65969 through 65997), and Tables A, B, and C in the Appendix 2 to the CY 2023 PFS final rule (70633 through 70650) for our previously finalized improvement activities Inventories. We also refer readers to the Quality Payment Program website under Explore Measures and Activities at <https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2022#measures> for a complete list of the current improvement activities. In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305 to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant interested parties identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

We are proposing to add five new improvement activities, modify an existing improvement activity, and remove three previously adopted improvement activities for the CY 2024 performance period/2026 MIPS payment year and future years. The proposed new and modified activities will help fill gaps we have identified in the Inventory, while the removal of three activities will help ensure that the Inventory reflects current clinical practice. We note that the proposed removal of one activity, IA_BMH_6, titled “Implementation of co-location PCP and MH services,” in the Behavioral and Mental Health subcategory is being proposed in order to ensure that the improvement activities Inventory best reflects current clinical practice, and in no way reflects a de-emphasis of the ongoing priority CMS is placing on behavioral and mental health in general, and on substance use disorder in particular. We also note that two of the five proposed new activities are in the Behavioral and Mental Health subcategory. We refer readers to Appendix 2 of this proposed rule for more details.

Four of the recommended new improvement activities are in the Population Management and the Behavioral and Mental Health subcategories. One proposed new activity, IA_PM_XX,

titled “Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services” would allow MIPS eligible clinicians to receive credit for establishing policies and procedures to improve practice capacity to increase HIV prevention screening and linkage to appropriate prevention resources through taking action with the goals of increasing capacity to expand HIV prevention screening, improving HIV prevention education and awareness, and reducing disparities in pre-exposure prophylaxis (PrEP) uptake. Another activity, IA_PM_XX, titled “Decision Support Improves Adherence to Cervical Cancer Screening and Management Guidelines” would allow MIPS eligible clinicians to receive credit for incorporating cervical cancer clinical decision support (CDS) within the electronic health record (EHR) system. This activity leverages the convenience and efficiency of more sophisticated decision support tooling to assist clinicians in applying complex data-driven guidelines to provide optimal care and better engagement with their patient population, including historically underserved populations. This activity proposal was submitted by the CDC.

Two of the five proposed new activities are in the Behavioral and Mental Health (BMH) subcategory, reflecting this important Federal priority. IA_BMH_XX, titled “Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women” would allow MIPS eligible clinicians to receive credit for screening for perinatal mood and anxiety disorders (PMADs) and substance use disorder (SUD) in pregnant and postpartum women, as well as screening and referring to treatment and/or referring to appropriate social services in patient care plans. The second new activity being proposed in the BMH subcategory, IA_BMH_XX, titled “Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults” would allow MIPS eligible clinicians to receive credit for the completion of age-appropriate screening for mental health and substance use in older adults, as well as screening and referring to treatment and/or referring to appropriate social services in patient care plans.

Of the five proposed new improvement activities, four activities directly align with CMS' Priority 5 for advancing health equity, Increase All Forms of Accessibility to Health Care Services and Coverage. Therefore, the activities aim to create a fair and just opportunity for all people to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, and/or other factors that affect access to care and health outcomes. These four proposed new improvement activities are the following: IA_PM_XX, titled "Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services"; IA_PM_XX, titled "Decision Support Improves Adherence to Cervical Cancer Screening and Management Guidelines"; IA_BMH_XX, titled "Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women"; IA_BMH_XX, titled "Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults." The fifth new proposed improvement activity is focused on MVP: IA_MVP, titled "Practice-wide quality improvement in the MIPS Value Pathways Program (MVP)."

With the advent of MVPs, MIPS eligible clinicians can report measures that are more relevant to their specialized practice, including through subgroup reporting. The proposed IA_MVP activity would require a clinician to complete a formal model for quality improvement action that is linked to a minimum of three of the measures within the specific MVP. We believe this activity would expand and formalize quality improvement (QI) activities across practices, ultimately leading to improvements in quality of care and fostering a culture of participation among staff. In addition, this activity would incentivize voluntary MVP adoption. It is important to note that, a clinician who reports an MVP can attest to the MVP improvement activity. However, a clinician in traditional MIPS is ineligible report the MVP improvement activity. Also, registration for an MVP is not sufficient for reporting the MVP improvement activity. Reporting the chosen MVP and attesting to having completed the necessary elements of

the MVP improvement activity are both required. We refer readers to section IV.A.3.b(2). of this proposed rule for more information on MVPs.

We are proposing to modify one existing activity’s description, titled “Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs,” and its validation criteria to explicitly promote the use of clinical decision support (CDS), particularly open-source, freely available, interoperable CDS. Additionally, we are proposing to remove three previously finalized improvement activities to ensure that the improvement activities Inventory best reflects current clinical practice.

(iii) Improvement Activity Reporting Policies

Regarding group reporting, we are not revising group reporting policies for MVPs at this time. In the CY 2020 PFS final rule (84 FR 62981 through 62988) and codified at § 414.1360(a)(2), we finalized the policy that, beginning with the 2020 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of § 414.1360 must be performed by at least 50 percent of the NPIs billing under the group’s TIN or virtual group’s TINs or that are part of the subgroup, as applicable. Additionally, the NPIs must perform the same activity during any continuous 90-day period within the same performance year. We would like to clarify the relationship between a subgroup’s successful completion of an improvement activity and its impact on the affiliated group. If a subgroup consists of 50 percent or more of the clinicians in the affiliated group, and the subgroup attests to completing an activity, then the group would receive credit for this improvement activity as this meets our standard for a group’s completion of an improvement activity specified at § 414.1360.

(4) Promoting Interoperability Performance Category

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record (EHR) technology (CEHRT) as a performance category under MIPS. We refer to this performance category as the Promoting Interoperability performance category (and in past rulemaking, we referred to it as the advancing care information performance category).

For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to our regulation at § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), CY 2022 PFS final rule (86 FR 65466 through 65490), and the CY 2023 PFS final rule (87 FR 70060 through 70087).

(b) Promoting Interoperability Performance Category Performance Period

In the CY 2021 PFS final rule (85 FR 84886), we established that for the CY 2024 MIPS payment year and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. We codified the policy at § 414.1320(g)(1) of our regulations, and subsequently re-designated that section as § 414.1320(h)(1) in the CY 2022 PFS final rule (86 FR 65671).

We are proposing that for the CY 2026 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 180-day period within CY 2024, up to and including the full CY 2024 (January 1, 2024, through December 31, 2024). This proposal would minimally increase the information collection burden on data submitters.

We believe that having additional data available from a longer performance period is beneficial to further improve the Promoting Interoperability performance category, and an integral step towards promoting health information exchange. Reporting on additional data during a longer performance period would provide MIPS eligible clinicians the opportunity to continuously monitor their performance, identify gaps in their reporting, and identify areas that may require their investigation and corrective action. We believe that requiring MIPS eligible clinicians to report additional data during a longer performance period will encourage MIPS eligible clinicians to produce more comprehensive and reliable data demonstrating that they are meaningful users of CEHRT.

Our long-term goal for the Promoting Interoperability performance category is to ensure the meaningful use of CEHRT and information exchange throughout the year, for all data, all clinicians, and all patients. Currently, when MIPS eligible clinicians select a 90-day performance period, this data is often not representative of their overall use of CEHRT throughout the entire calendar year. Instead, it reflects their best performing 90-days during the calendar year. In order for MIPS eligible clinicians to have a more accurate understanding of their overall performance, we want to move towards reporting on a full year's performance, which can be achieved by incrementally increasing the number of days in the performance period.

We continue to focus on patient safety, and the Promoting Interoperability performance category continues to focus on the safety and safe use of patient data by demonstrating the meaningful use of CEHRT. If a MIPS eligible clinician were to only focus on their best 90-day performance period, they may not focus on improving their overall performance in meaningfully using CEHRT throughout the year, and ultimately, observe, correct, and mitigate any potential patient safety concerns that may arise due to gaps in interoperability throughout the calendar year. If a MIPS eligible clinician does not meaningfully use CEHRT throughout the entire CY,

there is a possibility for gaps in the transfer of key patient data necessary for supporting a diagnosis, continued treatment, or overall care planning.

Therefore, we are proposing to modify § 414.1320(h) for the Promoting Interoperability performance category performance period to remove the reference to subsequent years after the CY 2024 MIPS payment year, and instead specify that the policy applies only through the CY 2025 MIPS payment year. We further propose to add a new paragraph at § 414.1320(i)(1) to reflect our proposed performance period of a minimum of a continuous 180-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year for the Promoting Interoperability performance category, beginning with the CY 2026 MIPS payment year.

We are inviting public comment on our proposal to require a continuous 180-day performance period for the Promoting Interoperability performance category beginning with the CY 2024 performance period/2026 MIPS payment year, and the proposed changes to the regulation text at § 414.1320.

(c) Certified Electronic Health Record Technology Requirements

Section 1848(q)(2)(B)(iv) of the Act requires that, for the Promoting Interoperability performance category, the MIPS eligible clinician must meet the requirements established for the specified performance period under section 1848(o)(2) of the Act for determining whether the MIPS eligible clinician is a meaningful electronic health record (EHR) user. Section 1848(o)(2)(A) of the Act requires that, to be treated as a meaningful EHR user for an EHR reporting period for a payment year, a MIPS eligible clinician must be using certified EHR technology (CEHRT). Section 1848(o)(4) of the Act defines CEHRT as a qualified electronic health record (as defined in section 3000(13) of the Public Health Service Act, or PHSA) that is certified by the Office of the National Coordinator for Health Information Technology (ONC)

pursuant to section 3001(c)(5) of the PHSA in accordance with the certification standards that ONC adopted under section 3004 of the PHSA.

Accordingly, the MIPS Promoting Interoperability performance category regulation at § 414.1375(b)(1) requires a MIPS eligible clinician to use CEHRT as defined at § 414.1305 for the performance period. Since the CY 2019 performance period, in general, this has consisted of EHR technology (which could include multiple technologies) certified under ONC's Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102), and has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition of CEHRT at § 414.1305.

As discussed in section III.R. of this proposed rule, in the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing proposed rule (88 FR 23758), which appeared in the April 18, 2023 **Federal Register**, ONC has proposed to discontinue the year-themed "editions," which ONC first adopted in 2012, to distinguish between sets of health IT certification criteria finalized in different rules. ONC is proposing to instead maintain a single set of "ONC Certification Criteria for Health IT," which would be updated in an incremental fashion in closer alignment to standards development cycles and regular health information technology (IT) development timelines (88 FR 23750). As further discussed in section III.R. of this proposed rule, we are proposing to modify the definition of CEHRT for purposes of the Quality Payment Program at § 414.1305 to no longer refer to year-specific editions, and to incorporate any changes made by ONC to its definition of Base EHR and its certification criteria for health IT.

(d) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

i. Changes to the Query of Prescription Drug Monitoring Program Measure under the Electronic Prescribing Objective

We previously adopted the Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing (e-Prescribing) objective for the Promoting Interoperability performance category. For background on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888) and the CY 2022 PFS final rule (86 FR 65466 through 65467), we finalized that the Query of PDMP measure will remain optional and eligible for 10 bonus points for the CY 2021 and CY 2022 performance periods.

In the CY 2023 PFS final rule, we finalized our proposal to require the Query of PDMP measure beginning with the CY 2023 performance period, and that the measure will be worth 10 points (87 FR 70061 through 70067). In addition, along with other key specifications described in the CY 2023 PFS final rule, we removed the phrase “except where prohibited in accordance with applicable law” from the measure description, and established two exclusions beginning with the CY 2023 performance period: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; and (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period (87 FR 70061 through 70067). Finally, in the CY 2023 PFS final rule, we finalized a third exclusion for the Query of PDMP measure, but this exclusion was only available for the CY 2023 performance period/2025 MIPS payment year. (87 FR 70067)

The second exclusion is the same exclusion that we adopted for e-Prescribing measure in the CY 2018 PFS final rule (82 FR 53679). It has come to our attention that the second exclusion is problematic because it does not address situations where the MIPS eligible clinician does not electronically prescribe Schedule II opioids or Schedule III and IV drugs, in accordance with applicable law during the performance period, but does write more than 100 permissible

prescriptions during the performance period. Therefore, we are proposing to modify the second exclusion criterion to state that any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period can claim the second exclusion.

We are inviting public comments on this proposal.

ii. Proposed Technical Update to the Electronic Prescribing Measure

The ONC 21st Century Cures Act final rule (85 FR 25660 through 25661) retired the “drug-formulary and preferred drug list checks” certification criterion at 45 CFR 170.315(a)(10), which was associated with measures under the Electronic Prescribing Objective for the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category (80 FR 62882 and 83 FR 59817). ONC retired this criterion after January 1, 2022, as provided in 45 CFR 170.550(m)(1) (85 FR 26661).

In the CY 2021 PFS final rule, we finalized that the “drug-formulary and preferred drug list checks” criterion will no longer be associated with measures under the Electronic Prescribing Objective and will no longer be required to meet the CEHRT definition for the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, beginning with CY 2021 EHR reporting and performance periods (85 FR 84815 through 84825).

In the CY 2023 PFS final rule, we inadvertently omitted a revision to TABLE 92: Objectives and Measures for the Medicare Promoting Interoperability Performance Category for the CY 2023 performance period to reflect this change (87 FR 70075). In an effort to more clearly capture the previously established policy finalized in the CY 2021 PFS final rule with respect to the e-Prescribing measure, we are proposing to revise the measure description as shown in Table 45 to read “At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT” and the numerator will be updated to read

to indicate “Number of prescriptions in the denominator generated and transmitted electronically using CEHRT” to reflect the removal of the health IT certification criterion “drug-formulary and preferred drug list checks.”

We are inviting public comments on this proposal.

iii. Changes to the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) measure

A. Background

In the CY 2022 PFS final rule (86 FR 65475 through 65477), we adopted the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) measure under the Protect Patient Health Information Objective in the Promoting Interoperability performance category beginning with the CY 2022 performance period. ONC developed several SAFER Guides, including the High Priority Practices SAFER Guide, to help organizations at all levels conduct self-assessments which optimize the safety and use of EHRs. Under the SAFER Guides measure, MIPS eligible clinicians are currently required to attest to whether they have conducted an annual self-assessment using the High Priority Practices SAFER Guide (available at <https://www.healthit.gov/topic/safety/safer-guides>), at any point during the calendar year in which the performance period occurs, with one “yes/no” attestation statement. Beginning with the CY 2022 performance period, we required MIPS eligible clinicians to complete this attestation for this measure, though MIPS eligible clinicians are not scored based on their answer to the attestation or whether they fully complete the self-assessment. An attestation of “yes” or “no” is currently acceptable, and a MIPS eligible clinician can attest “no” without penalty. For additional information, please refer to our discussion of the SAFER Guides measure in the CY 2022 PFS final rule (86 FR 65475 through 65477).

B. Proposed Change to the SAFER Guides Measure

The SAFER Guides measure is intended to encourage MIPS eligible clinicians to use the High Priority Practices SAFER Guide, annually, to assess their progress and status on important facets of patient safety, including CEHRT implementation, safety and effectiveness, identifying vulnerabilities, and developing a “culture of safety” within their organization. For instance, the High Priority Practices SAFER Guide asks users to review and ensure that entries of allergies, problem lists, and diagnostic test results utilize standardized coding elements in their CEHRT (such as uniformly and consistently coding results as “normal” or “high”). By ensuring their CEHRT consistently documents and codes health information, MIPS eligible clinicians confirm their CEHRT supports clear communication of a patient’s health status, mitigating the risk of oversight, gaps, or potential safety risks introduced by the CEHRT, in the interoperable exchange of health information. By implementing the High Priority Practices SAFER Guide’s recommended practices, MIPS eligible clinicians may be better positioned to operate CEHRT responsibly in care delivery, and to make improvements to the safe use of CEHRT as necessary over time.

Given our interest in promoting the safety and the safe use of CEHRT, we are proposing to amend the SAFER Guides measure to require MIPS eligible clinicians to conduct this self-assessment annually, and attest a “yes” response, accounting for completion of the self-assessment for the High Priority Practices SAFER Guide. The self-assessment should be completed between clinicians and staff members together, allowing MIPS eligible clinicians to see a snapshot of the status of the CEHRT used by their organization in terms of safety, and to identify areas needing improvement. Therefore, we are proposing to modify the SAFER Guides measure beginning with the CY 2024 performance period/2026 MIPS payment year such that only a “yes” response on the attestation will constitute completion of this measure, and a “no” response will result in a score of zero for the whole Promoting Interoperability performance category, indicating that the MIPS eligible clinician failed the requirements of the Promoting

Interoperability performance category and is not a meaningful user of CEHRT. To reflect this proposal, we are proposing to modify our reporting requirements at § 414.1375 (b)(2)(ii)(C) to include “For the 2024 MIPS payment year through the 2025 MIPS payment year”, and to add § 414.1375 (b)(2)(ii)(D), to say “Beginning with the 2026 MIPS payment year, submit an affirmative attestation regarding the MIPS eligible clinician’s completion of the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.”

We believe this proposed modification is feasible for MIPS eligible clinicians to implement, as they have had time to grow familiar with the use of the SAFER Guides under this measure by attesting either “yes” or “no” to conducting the self-assessment. We also note the availability of resources to assist MIPS eligible clinicians with completing the self-assessment as required by the SAFER Guides measure. One example of such resources is the SAFER Guides authors’ paper titled “Guidelines for US Hospitals and Clinicians on Assessment of Electronic Health Record Safety Using SAFER Guides,” available without charge to download or use at <https://jamanetwork.com/journals/jama/fullarticle/2788984>.

Therefore, we are proposing to modify our requirements for the SAFER Guides measure beginning with the CY 2024 performance period and subsequent years, to require MIPS eligible clinicians to conduct, and therefore attest “yes,” an annual self-assessment of their CEHRT using the High Priority Practices SAFER Guide (available at <https://www.healthit.gov/topic/safety/safer-guides>), at any point during the calendar year in which the performance period occurs. Under this proposal, although the SAFER Guides measure would continue to be required with no associated points, an attestation of “no” would result in the MIPS eligible clinician not meeting the measure’s requirements and therefore not a meaningful user of CEHRT, warranting a score of zero for the Promoting Interoperability performance category.

If our proposal to modify the SAFER Guides measure is finalized, we are also proposing to modify our reporting requirements at § 414.1375(b)(2)(ii)(C), and to add § 414.1375(b)(2)(ii)(D). Specifically, at § 414.1375(b)(2)(ii)(C), we propose to end our current requirements for the SAFER Guides measure with the 2025 MIPS payment year. Then, at § 414.1375(b)(2)(ii)(D), we propose to require, beginning with the 2026 MIPS payment year, that a MIPS eligible clinician submit an affirmative attestation regarding the MIPS eligible clinician's completion of the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.

As a reminder, under the SAFER Guides measure, we do not currently require, and do not propose to require, MIPS eligible clinicians to attest to whether they have implemented any best practices “fully in all areas” as described in the High Priority SAFER Guide, nor will a MIPS eligible clinician be scored on how many of the practices they have fully implemented (86 FR 65475). We refer readers to Table 45 in this proposed rule for a description of the measure, and to the CY 2022 PFS final rule for additional background information (86 FR 65475 through 65477). Upon review of our current regulation governing reporting of the current SAFER Guides measure at § 414.1375(b)(2)(ii)(C), we identified areas where our regulation is unclear regarding the requirements for reporting the SAFER Guides measure. We are therefore also proposing to amend the regulatory text at § 414.1375(b)(2)(ii)(C) to specify clearly that a MIPS eligible clinician must submit an attestation, with either an affirmative or negative response, with respect to whether the MIPS eligible clinician completed the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs. As previously discussed, if our proposal to modify the SAFER Guides measure is finalized, this proposed regulatory provision would only be applicable for the 2024 MIPS payment year through the 2025 MIPS payment year.

We are inviting public comments on these proposals.

(e) Requirements for the Promoting Interoperability Performance Category for the CY 2024

Performance Period

i. Objectives and Measures for the CY 2024 Performance Period

For ease of reference, Table 45 lists the objectives and measures for the Promoting Interoperability performance category for the CY 2024 performance period/2026 MIPS payment year as revised to reflect the policies proposed in this proposed rule.

TABLE 45: Objectives and Measures for the Promoting Interoperability Performance Category for the CY 2024 Performance Period

Objective	Measure	Numerator	Denominator	Exclusion
Electronic Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT.*	Number of prescriptions in the denominator generated and transmitted electronically using CEHRT.*	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
Electronic Prescribing	Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. Any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period.*
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

Objective	Measure	Numerator	Denominator	Exclusion
or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other health care providers into their EHR using the functions of CEHRT	(1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.			
Health Information Exchange	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Health Information Exchange	HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy. Statement 2: The HIE that I participate in is capable of exchanging	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	<p>information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners. Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.</p>			
Health Information Exchange	<p>Enabling Exchange Under TEFCA MIPS eligible clinicians would attest to the following:</p> <ul style="list-style-type: none"> ● Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the Federal Register and on ONC’s website) in good standing (i.e. not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy. ● Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement. 	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or	Provide Patients Electronic Access to Their Health Information: For at	Number of patients in the denominator (or patient authorized	Number of unique patients seen by the MIPS eligible clinician during the	N/A

ii. Scoring Methodology for the CY 2024 Performance Period

Table 46 reflects the scoring methodology for the Promoting Interoperability performance category for the CY 2024 performance period.

TABLE 46: Scoring Methodology for the CY 2024 Performance Period

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician’s choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: <ul style="list-style-type: none"> Immunization Registry Reporting Electronic Case Reporting 	25 points	Required
	Report one of the following measures: <ul style="list-style-type: none"> Public Health Registry Reporting Clinical Data Registry Reporting Syndromic Surveillance Reporting 	5 points (<i>bonus</i>)	Optional

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored. In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review, and attest to the actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

iii. Exclusion Redistribution

Many required measures have exclusions associated with them as shown on Table 45. If a MIPS eligible clinician believes that an exclusion for a particular measure applies to them, they may claim it when they submit their data. The maximum points available in Table 46 do not include the points that will be redistributed in the event that a MIPS eligible clinician claims an exclusion. For ease of reference, Table 47 shows how points will be redistributed among the objectives and measures for the CY 2024 performance period in the event a MIPS eligible clinician claims an exclusion.

TABLE 47: Exclusion Redistribution for CY 2024 Performance Period

Objective	Measure	Redistribution if exclusion is claimed
Electronic Prescribing	e-Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange under TEFCA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following two measures: <ul style="list-style-type: none"> • Electronic Case Reporting • Immunization Registry Reporting 	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored. In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review, and attest to the actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

iv. 2015 Edition Health IT Certification Criteria

For ease of reference, Table 48 lists the objectives and measures for the Promoting Interoperability performance category for the CY 2024 performance period and the associated 2015 Edition health IT certification criteria.

TABLE 48: Promoting Interoperability Performance Category Objectives and Measures and 2015 Edition Certification Criteria

Objective	Measure	2015 Edition (CY 2024 Performance Period)
Electronic Prescribing	e-Prescribing	§ 170.315(b)(3) Electronic prescribing
	Query of PDMP	§ 170.315(b)(3) Electronic prescribing
Health Information Exchange	Support electronic referral loops by sending health information	§ 170.315(b)(1) Transitions of care
	Support electronic referral loops by receiving and reconciling health information	§ 170.315(b)(1) Transitions of care § 170.315(b)(2) Clinical information reconciliation and incorporation
Health Information Exchange (alternative)	Health Information Exchange (HIE Bi-Directional Exchange)	Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
Health Information Exchange (alternative)	Enabling Exchange under TEFCA	Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Application access — standardized API for patient and population services
		§ 170.315(g)(10) Application access — standardized API for patient and population services
Provider to Patient Exchange	Provide patients electronic access to their health information	§ 170.315(e)(1) View, download, and transmit to 3rd party
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Application access — standardized API for patient and population services
Public Health and Clinical Data Exchange	Immunization registry reporting	§ 170.315(f)(1) Transmission to immunization registries
	Syndromic surveillance reporting	§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance
	Electronic case reporting	§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public health registry reporting	§ 170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
		§ 170.315(f)(7) Transmission to public health agencies — health care surveys
Clinical data registry reporting	No 2015 health IT certification criteria at this time.	
Protect Patient Health Information	Security Risk Assessment	The requirements are a part of CEHRT specific to each certification criterion.
	Safety Assurance Factors for EHR Resilience Guides (SAFER Guides)	No 2015 health IT certification criteria at this time.

*The ONC 21st Century Cures Act final rule made changes to the existing 2015 Edition Health IT

Certification Criteria by introducing new criteria and revising and removing existing criteria (85 FR 25667 through

25668). These changes are required for certified health IT used by MIPS eligible clinicians beginning with the CY 2023 performance period.

(f) Clinical Social Workers

In the CY 2022 PFS final rule (86 FR 65387 through 65389), we added clinical social workers to the definition of a MIPS eligible clinician under § 414.1305, beginning with the CY 2022 performance period/2024 MIPS payment year. Prior to the CY 2022 performance period, this clinician type was not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers were also not eligible for Medicaid EHR incentive payments.

In the CY 2022 PFS final rule (86 FR 65489), we stated that clinical social workers therefore may lack experience with the adoption or use of CEHRT, and that we believed there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to them. In the CY 2022 PFS final rule (86 FR 65489) and the CY 2023 PFS final rule (87 FR 70087), we established that we will apply to clinical social workers the same reweighting policy for the Promoting Interoperability performance category that we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians who are non-physician practitioners for the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year. Specifically, because we believed there may not be sufficient Promoting Interoperability performance category measures available and applicable to clinical social workers, pursuant to section 1848(q)(5)(F) of the Act, we assigned a weight of zero to the Promoting Interoperability performance category for clinical social workers. However, if a clinical social worker submits any data for any of the measures specified for the Promoting Interoperability performance category, then this category will not be reweighted to zero and we will score the clinical social worker on this category as part of their

final composite performance score in accordance with § 414.1380(c)(1). This reweighting policy for clinical social workers is codified at § 414.1380(c)(2)(i)(A)(4)(iii).

Because CY 2022 was the first year that clinical social workers were included in our definition of MIPS eligible clinicians, we do not yet have any performance period data that we could use to evaluate whether the Promoting Interoperability performance category measures are applicable to this type of MIPS eligible clinician. In the CY 2023 PFS final rule (87 FR 70087), when we reweighted the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/2025 MIPS payment year, we noted we would evaluate whether this reweighting policy should be continued for future years when we have performance period data available. Given that we do not have data from the CY 2022 performance period available to analyze at the time of this proposed rule, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2024 performance period/2026 MIPS payment year, and making the corresponding revisions to the regulatory text at § 414.1380(c)(2)(i)(A)(4)(iii).

We are inviting public comments on this proposal.

(5) APM Improvement Activities Performance Category Score

(a) Background

Section 1848(q)(5)(C) of the Act establishes specific scoring rules for the improvement activities performance category. Section 1848(q)(5)(C)(ii) of the Act provides that a MIPS eligible clinician who is in an Alternative Payment Model (APM), as defined in section 1833(z)(3)(C) of the Act, with respect to a performance period shall earn a minimum score of one half of the highest potential score for the improvement activities performance category. In accordance with section 1848(q)(5)(C)(ii) of the Act, we codified at § 414.1380(b)(3)(i) that individual MIPS eligible clinicians or groups who participate in an APM (as defined in section 1833(z)(3)(C) of the Act) for a performance period will earn at least

50 percent for the improvement activities performance category (81 FR 30132). With respect to MIPS eligible clinicians who participate in a MIPS APM for a performance period, we stated that they may receive an improvement activity score higher than 50 percent (81 FR 30132). Because we had identified all MIPS APMs as having met the improvement activity threshold score requirement, we noted that all MIPS APM participants will receive a score of 100 percent for the improvement activities performance category (85 FR 84865, 85031).

(b) Proposal

It has come to our attention that in the preamble of the CY 2021 PFS final rule (85 FR 84865) the terminology “automatic” was used in reference to the baseline score provided by section 1848(q)(5)(C)(ii) of the Act (85 FR 84865). This has led to an interpretation by some MIPS eligible clinicians that the baseline score represents “credit” that is “automatically applied” in all circumstances.³¹⁶ This is not how we intended this provision to function, and we wish to ensure that our rules do not automatically grant such “credit”.³¹⁷ We are concerned that absent revisions the application of our current regulation may produce unintended or unexpected scoring outcomes for MIPS eligible clinicians and groups.

In order to prevent such scoring scenarios, we are proposing to amend § 414.1380 by revising paragraph (b)(3)(i) to require that, in order to initiate the baseline score for the improvement activities performance category, a MIPS eligible clinician or group with APM participation must have submitted data for two performance categories or attest to having completed an improvement activity. We are also proposing to amend § 414.1380 by adding paragraph (c)(2)(iv) to provide that we will not apply a baseline score if we have also approved a

³¹⁶ For example, in the “2022 Data Submission FAQs,” available at <https://qpp.cms.gov/resources/resource-library>, we stated that MIPS eligible clinicians participating in APMs are eligible to receive “automatic credit” in the improvement activities performance category.

³¹⁷ Similarly, in the CY 2021 PFS final rule, we finalized a proposal to modify § 414.1380(b)(3)(ii) to make clear that the baseline score provided by section 1848(q)(5)(C)(i) of the Act for the improvement activities performance category is not automatically granted for clinicians participating in patient-centered medical homes and comparable specialty practices (83 FR 59868).

request for performance category reweighting or hardship exception affecting the improvement activities performance category, including MIPS EUC Exception applications under § 414.1380(c)(2)(i)(A)(6) or (C)(2), and automatic EUC events per § 414.1380(c)(2)(i)(A)(8) or (C)(3).

We believe that these proposals are necessary in part because §414.1380(c)(2)(i)(A)(6) requires us to score any data submitted by a MIPS eligible clinician with an approved application-based hardship exception or who was identified as a clinician in a CMS-designated region affected by an automatic EUC event under §§ 414.1380(c)(2)(i)(A)(6), (A)(8), (C)(2), and (C)(3), regardless of whether that submission was for the purpose of MIPS final scoring. Based upon our current policies, a submission of data for the quality or Promoting Interoperability performance categories would initiate or prompt the calculation of a baseline score for the improvement activities performance category, making the improvement activities category eligible for scoring. We believe that result is contrary to the purpose of hardship exceptions, such as the MIPS EUC Exception application provided by § 414.1380(c)(2)(i)(A)(6), which are designed to reweight the improvement activities performance category to zero percent.

We also believe this proposal would further our vision that “the bedrock of the Quality Payment Program is high-quality, patient-centered care followed by useful feedback, in a continuous cycle of improvement” (81 FR 77010). Generally speaking, through MIPS, we collect feedback based upon data and measures submitted for the quality, Promoting Interoperability, improvement activities, and cost performance categories. We need composite scores from at least two of those four performance categories in order for us to calculate a clinician’s final score. There is no data submission requirement for the cost performance category—we use the Medicare claims data submitted by that clinician to calculate their cost-measure performance. Similarly, a MIPS eligible clinician is not required to submit detailed data for the improvement activities performance category; instead, a MIPS eligible clinician simply

attests to having completed an activity or activities to report the performance category. We therefore believe that it is most appropriate for a MIPS eligible clinician to submit measurable data on the quality and Promoting Interoperability performance categories for the purpose of final scoring in order to be credited with the baseline score for the improvement activities performance category.³¹⁸

We believe these proposals are timely in light of the proposal at section III.F.h.2. to require that Medicare Shared Savings Program (SSP) Accountable Care Organization (ACO) clinicians report the Promoting Interoperability performance category at the TIN level, as opposed to the APM Entity (that is, the, ACO) or individual level. If our existing policies are not amended, an SSP ACO clinician's submission of data to the Promoting Interoperability category will prompt the baseline score in the improvement activities performance category in every circumstance regardless of whether the clinician's group requested or otherwise qualified for reweighting of the performance categories. This proposal would allow us to conform to the general scoring expectation that, in the event the participant's request to reweight three or four performance categories to zero percent due to a hardship, per §§ 414.1380(c)(2)(i)(A)(6), (A)(8), (C)(2), and (C)(3), the participant would receive a final score equal to the performance threshold, resulting in a neutral payment adjustment, even if data are incidentally submitted for other performance categories.

In summary, we propose to amend § 414.1380 by revising paragraph (b)(3)(i) and adding paragraph (c)(2)(iv) to limit the application of baseline scores provided under section 1848(q)(5)(C)(ii) of the Act for the purpose of MIPS final scoring. We seek comment on these proposals.

³¹⁸ There is no data submission requirement for the quality and cost performance categories for a MIPS eligible clinician assessed under the facility-based measurement scoring methodology described in § 414.1380(e). Therefore, we would require that such clinicians report data on the Promoting Interoperability performance category (or attest to having completed an improvement activity) in order to prompt the baseline score for the improvement activities performance category.

g. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards with respect to applicable measures and activities specified for the four performance categories for a performance period and use such methodology to provide for a composite performance score for each such clinician for each performance period.

For the CY 2024 performance period/2026 MIPS payment year, we intend to continue to build on the scoring methodology we have finalized for prior years. This scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. In this proposed rule we are proposing to update our scoring policies consistent with this framework. Specifically, we propose to—

- Provide a technical update to §414.1380(a)(1)(i) and (b)(1)(v)(A),
- Amend our criteria for assessing ICD-10 coding impacts under our scoring flexibilities policy; and
- Update our policies regarding Improvement scoring for the cost performance category.

We are not proposing changes to scoring policies for the Promoting Interoperability or improvement activities performance categories.

(b) Technical updates

In the CY 2022 PFS final rule, we finalized proposals to remove measure bonus points for reporting additional high priority measures and using end to end electronic reporting beginning in the CY 2022 performance period/2024 MIPS payment year (86 FR 65504 through 65507). We updated corresponding regulation at § 414.1380(b)(1)(v)(B)(1)(iii) regarding the end

to end measure bonus points, but not § 414.1380(a)(1)(i) regarding performance standards or § 414.1380(b)(1)(v)(A) regarding the high priority bonus points. Accordingly, we propose to revise § 414.1380(a)(1)(i) to provide that, measure bonus points for submitting high priority measures and using end-to-end reporting are available for performance periods and payment years prior to the CY 2023 performance period/2025 MIPS payment year. We also propose to revise § 414.1380(b)(1)(v)(A) to state that, beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive these measure bonus points for submitting high priority measures.”

We refer readers to our regulation at § 414.1380 for our current policies on scoring. We request comments on these technical update proposals.

(c) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our current policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR 65490 through 65509, and 87 FR 70088 through 70091). In the CY 2023 PFS final rule, we finalized policies to score administrative claims measures in the quality performance category using benchmarks calculate from data submitted during the associated performance period and clarified the topped-out measure lifecycle (87 FR 70088 through 70091).

(i) Scoring Flexibility for Changes That Impact Quality Measures During the Performance Period

We refer readers to CY 2018, CY 2019, Quality Payment Program final rules and the CY 2021, and CY 2022 PFS final rules (82 FR 53714 through 53716, 83 FR 59845 through 59847, 85 FR 84898 through 84901, and 86 FR 65491 and 65492 respectively) and § 414.1380(b)(1)(vii)(A) for our previously establish scoring flexibilities policy.

In the CY 2018 Quality Payment Program final rule (82 FR 53714 through 53716), we finalized that, beginning with the CY 2018 performance period, we will assess performance on measures considered significantly impacted by ICD–10 coding changes during the performance period based only on the first 9 months of the 12-month performance period. We stated that our determination as to whether a measure is significantly impacted by ICD–10 coding changes would include these factors: A more than 10 percent change in codes in the measure numerator, denominator, exclusions, and exceptions; clinical guideline changes or new products or procedures reflected in ICD–10 code changes; and feedback on a measure received from measure developers and stewards (82 FR 53714). We stated that 9 months of data is sufficient to assess performance when 12 months of data is not available. We finalized that we would publish a list of measures requiring 9 months of data on the CMS website by October 1st of the performance period if technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the CY 2020 performance period) (82 FR 53716).

In the CY 2019 Quality Payment Program final rule (83 FR 59845 through 59847), we finalized policies beginning with the CY 2019 performance period/2021 MIPS payment year to reduce the total available measure achievement points in the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise no longer be comparable to a historic benchmark. We wanted the flexibility to respond to instances in which the clinical evidence and guidelines change and approved measures no longer reflect the most up-to- date clinical evidence

and could even result in a practice that is harmful to patients. We finalized expanding the list of reasons that a quality measure may be impacted during the performance period in addition to revising when we will allow scoring of the measure with a performance period truncation (to 9 months of data) or the complete suppression of the measure if 9 months of data are not available.

In the CY 2021 PFS final rule (85 FR 84898 through 84901), we finalized a consolidation of the CY 2018 and CY 2019 scoring flexibilities policies that allowed, beginning with the CY 2021 performance period/2023 MIPS payment year, truncation of the performance period or suppression of a quality measure respectively if CMS determines that revised clinical guidelines, measure specifications or codes impact clinician's ability to submit information on the measure or may lead to potentially misleading results. Based on the timing of the changes to clinical guidelines, measure specifications or codes, we will assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we will suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted.

In the CY 2022 PFS final rule (86 FR 65491), we finalized a policy to expand the situations in which the scoring flexibilities policies would be applied. This update revised § 414.1380(b)(1)(vii)(A) to change "significant changes" to "significant changes or errors" and to include the omission of codes or inclusion of inactive or inaccurate codes. Previous versions of the policy only included changes to codes (such as ICD-10, CPT, or HCPCS codes), clinical guidelines, or measure specification as impacts outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results and trigger application of this policy.

In this year's rule, we are proposing two modifications to the criteria by which we assess the impacts of ICD-10 coding changes. Firstly, we are proposing to eliminate the 10 percent ICD-10 coding change factor established in the CY 2018 Quality Payment Program rule (82 FR

53714). The quality and cost performance categories rely on measures that use detailed specifications that include ICD–10 code sets. We annually issue new ICD–10 coding updates, which are effective from October 1 through September 30. As part of this update, codes are added and removed from the ICD–10 code sets. When we adopted this standard in the CY 2018 Quality Payment Program final rule (82 FR 53714), we were concerned that ICD–10 coding changes in the final quarter of the performance period may render a measure no longer comparable to its historical benchmark. However, we have found that a 10 percent change to ICD-10 codes does not necessarily reflect a meaningful impact to clinicians’ ability to report and be fairly scored on a quality measure. In the CY 2018 Quality Payment Program proposed rule, we discussed an approach where we would consider any change in ICD–10 coding to impact performance on a measure and thus only rely on the first 9 months of the 12-month performance period for such measures; however, we stated that such an approach was too broad (overly inclusive of changes) and would truncate measurement for too many measures where performance may not be significantly affected (82 FR 30098). We maintain this perspective but have concluded that a 10 percent change in codes is similarly over inclusive as it leads to the suppression of measures that can still be scored using all 12 months of the performance period. In place of the 10 percent threshold we propose to assess the overall impact on a measure resulting from changes to ICD–10 codes. Rather than consider a flat 10 percent change as a factor for when ICD–10 coding changes affect a measure, we would instead assess how the coding changes affect the measure numerator, denominator, exclusions, and exceptions in ways that could lead to misleading or harmful results. We would assess whether resultant changes to the numerator, denominator, exceptions, exclusions, or other measure elements change the scope or intent of the measure.

Changes in measure scope or intent would be considered significant changes that affect the applicability of the historical benchmark. ICD-10 codes include information related to

clinical diagnoses and eligible patient population. For example, ICD-10 codes in the denominator correspond to the total eligible patient population considered for a measure. If as a result of a clinical guideline change a code is changed from an exclusion to a code to be considered in the total patient population indicated in the denominator for a measure, this would meaningfully change the scope of the measure and could lead to misleading results in measurement.

Additionally, instances in which coding changes change the designation of whether performance was met or not (numerator) could similarly lead to misleading results. These changes would be considered significant and therefore trigger our scoring flexibilities policy.

Second, we are proposing to assess the impacts of coding changes and our associated course of action (suppression, truncation, or standard 12-month reporting) by measure collection type. Our scoring policy states that we calculate benchmarks by collection type (§ 414.1380(b)(1)(ii)). As benchmarks are assessed by collection type, we must consider by collection type whether the changes or errors will result in patient harm or misleading results.

Each collection type has different technical limitations. For example, measure specifications for the MIPS CQMs and Medicare Part B claims collection types can be updated in the performance period immediately following the publication each October of changes to ICD–10 codes. If an ICD–10 coding change occurs in October of 2024, CMS can immediately update the specifications for the measure’s MIPS CQMs and Medicare Part B claims collection types and the ICD–10 changes would not result in any misleading results for the measure for those collection types.

This differs from eCQM measure specifications, which are posted in the May the year before the measure specifications take effect and are valid for the 12-month reporting period. For the CY 2024 performance period/2026 MIPS payment year, eCQM measures specifications will be posted in May of 2023 and are valid for the applicable 12-month performance period in CY 2024. In the example given above, the measure’s eCQM collection type would not be updated

again until May 2025 for the CY 2026 performance period/2028 MIPS payment year, and clinicians would be left reporting pursuant to outdated specifications for the final quarter of the CY 2024 performance period. This could result in misleading results for the measure's eCQM collection type. As a result, it would be appropriate for CMS to assess the impact of changes to measures and implement the appropriate scoring flexibility by collection type.

Lastly, we are proposing that measure specifications for eQMs include the capability to be truncated to a 9-month performance period. Current measure specifications for eQMs provide exclusively for a 12-month reporting period. If a measure is significantly impacted by ICD-10 coding changes, it therefore cannot be reported for a truncated performance period of 9-month. In order to implement the scoring flexibilities policy as intended and protect our ability to score measures where 9 consecutive months of data is available, we propose to begin requiring measure specifications to include logic for a 9-month performance period in addition to the currently existing 12-month performance period.

These updates will help us to better provide scoring flexibilities to clinicians by being sensitive to the particular impacts to and capabilities of the particular quality measures collection types. We seek comment on our proposal to update the criteria by which we apply scoring flexibilities in response to ICD-10 coding changes.

(d) Cost Performance Category Score

(i) Improvement Scoring Methodology

(A) Background

Section 1848(q)(5)(D)(i) requires that, if sufficient data are available to measure a MIPS eligible clinician's improvement in the quality and cost performance categories, then our methodology for computing the final score must take into account such improvement. In the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), we established policies related to measuring improvement in the cost performance category at the measure level, an

improvement scoring methodology for the cost performance category, and a formula for calculating the cost performance category percent score to include achievement and improvement. These policies were to apply beginning with the CY 2018 performance period/2020 MIPS payment year. We codified these policies at 42 CFR 414.1380(b)(2)(iii) and (iv) (82 FR 53748 through 53752, 53957).

Subsequent to the publication of the CY 2018 Quality Payment Program final rule, the Bipartisan Budget Act of 2018 (BBA 18) (Pub. L. 115-123, February 9, 2018) was enacted. Section 51003(a)(1)(B) of the BBA 18 added a new clause at section 1848(q)(5)(D)(iii) of the Act which provided that the cost performance category score shall not take in to account the improvement of the MIPS eligible clinician for each of the second, third, fourth, and fifth years for which the MIPS applies to payments (the CY 2018 performance period/2020 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year).

To implement these statutory changes, in the CY 2019 PFS final rule (83 FR 35956, 36080 through 36082), we established that the maximum cost improvement score for the CY 2018 performance period/2020 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year is zero percentage points, which we codified at § 414.1380(a)(1)(ii) and (b)(2)(iv)(E). In the CY 2023 PFS final rule (87 FR 70091 through 70093, 70228), we stated that we would begin to implement cost improvement scoring in the CY 2022 performance period/2024 MIPS payment year and established that the maximum cost improvement score available would be 1 percentage point. We codified this policy at § 414.1380(b)(2)(iv)(E). In addition, under our authority at § 414.1380(c)(2)(i)(A)(8), we reweighted the cost performance category's score to zero percent of the final score for the CY 2019 performance period/2022 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year due to the COVID-19 Public Health Emergency (PHE) (85 FR 19277 through 19278; See "Extension to Data Submission Deadline" on Quality Payment

Program website at <https://qpp.cms.gov/>). On these bases, to date, we have not applied a cost improvement score to MIPS eligible clinicians' final scores in accordance with the policies we established in the CY 2018 Quality Payment Program final rule and our regulations at § 414.1380(b)(2)(iii) and (iv). (<https://qpp.cms.gov/>).

(B) Description of Previously Finalized Cost Improvement Scoring Methodology

As discussed previously in this section, we established several policies related to our calculation and application of cost improvement scores to MIPS eligible clinicians' final scores in the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752). First, we established that we would determine the cost improvement score at the individual measure level, instead of the performance category level, for the cost performance category (82 FR 53749 through 53750). Second, we established our methodology for calculating the cost improvement score, generally by comparing the number of cost measures with significant improvement in performance and the number of cost measures with significant declines in performance for a MIPS eligible clinician or group between two consecutive performance periods (82 FR 53750 through 53752). Specifically, we established that we would quantify the cost improvement score by subtracting the number of cost measures with a significant decline from the number of cost measures with a significant improvement, and then dividing the result by the number of cost measures for which the MIPS eligible clinician or group was scored for two consecutive performance periods, and then multiply the resulting fraction by the maximum improvement score (82 FR 53750 through 53752). We further established that we would determine whether there was significant improvement or decline in performance between the two performance periods by applying a common standard statistical test to measure significance, the t-test, as used in the Shared Savings Program (82 FR 53750 through 53752). Finally, we established that the cost improvement score cannot be lower than zero percentage points (82 FR 53750 through 53752).

We codified our cost improvement scoring policies at § 414.1380(b)(2)(iv). These policies governing our cost improvement scoring methodology have not been modified since the CY 2018 Quality Payment Program final rule.

(C) Mathematical Feasibility Issue for Cost Improvement Scoring Methodology

In reviewing our cost improvement scoring methodology, we discovered that calculating cost improvement scoring based on comparing only cost measures with a statistically significant change, determined by using a t-test, is not congruent with the underlying data. A t-test compares how significant the differences are between group means, which are aggregate values, and cannot compare how significant the differences are between single values. However, our current cost improvement methodology set forth at § 414.1380(b)(2)(iv) requires comparing a MIPS eligible clinician's scores for an individual cost measure, which are single value points rather than group means. Further, the current methodology purports to compare those single value points between two consecutive performance periods to determine if there has been a statistically significant change (improvement or decline) in performance. Therefore, a t-test cannot be applied to the single cost measure score data points for consecutive time periods to determine if a statistically significant change has occurred, rendering our cost improvement scoring methodology mathematically infeasible.

When we initially developed the cost improvement scoring methodology for the cost performance category, there were only two population-based cost measures (total per capita cost and Medicare Spending per Beneficiary measures), and no episode-based measures. As of the CY 2023 performance period/2025 MIPS payment year, there are 23 episode-based cost measures in addition to the two population-based measures. We expect to add additional episode-based measures to the cost performance category in future years as MIPS matures.

We believe that the aggregated nature of the two population-based measures influenced our determination regarding the feasibility of establishing statistical significance, using a t-test,

when we developed and established the cost improvement scoring methodology. However, although these population-based measures are aggregated measures, they are calculated as individual single values in time, and not aggregate values which the t-test requires, for a specific clinician for each of the two consecutive performance periods. Further, considering a method using statistical significance might have been an oversight because of the lack of episode-based measures when the cost improvement scoring method was developed.

Because we have not implemented cost improvement scoring since we finalized this methodology in the CY 2018 Quality Payment Program final rule as discussed in section (4)(a)(iv) of this proposed rule, we failed to identify that the currently established cost improvement scoring method is not mathematically feasible. We identified the mathematical infeasibility of the current cost improvement methodology in the process of implementing cost improvement scoring for the CY 2023 performance period/2025 MIPS payment year.

(D) Operational Feasibility Issues for Cost Improvement Scoring Methodology

In addition, in the process of implementing cost improvement scoring for the CY 2023 performance period/2025 MIPS payment year, we identified three issues with our current policy at § 414.1380(b)(2)(iv)(A) because we determine each MIPS eligible clinician's cost improvement score at the individual cost measure level, and not the category level, for the cost performance category. To address these three issues, further specified herein, we propose to revise this policy so that we will determine the cost improvement score at the category level, instead of the cost measure level, for the cost performance category.

- Measure level improvement scoring implementation issue: The growing number of cost measures brings into question if using the current methodology for cost improvement scoring introduces complexities to its implementation, which in turn brings into question operational feasibility. When the methodology was established, in the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), there were only two cost measures. As of the

CY 2023 performance period/2025 MIPS payment year, there are 25 cost measures; we expect to add additional measures to the cost performance category as MIPS matures. Maintaining measure level improvement scoring, for a performance category that will continue to see growth in the number of measures, would be resource intensive, complex to implement, and error prone. Specifically, every measure would need its own workflow and testing, which would increase the amount of work to ensure year-over-year comparisons are accurate and increase risk of calculation or data errors. Further, maintaining measure level cost improvement scoring would introduce the same operational complexities we see in benchmarking measures, particularly when a measure encounters significant change from one year to the next – a reality that might present in future MIPS performance years. These challenges support our proposal to changing improvement scoring from measure level to category level for the cost performance category.

- Performance category improvement scoring consistency: As set forth at § 414.1380(b)(1)(vi)(C), we calculate each MIPS eligible clinician’s improvement score for the quality performance category in MIPS at the performance category level. Upon further evaluation, we found that using two different methods of improvement scoring for the quality and cost performance categories would increase the implementation cost and operational complexity described above – as well as confuse MIPS eligible clinicians and call into question why we use two different methodologies. As such, we concluded that using category level assessment for cost improvement scoring would establish consistency across MIPS and allow effective communication with MIPS eligible clinicians, while reducing implementation cost and operational complexity.

- Fairness of improvement scoring: The episode-based measures for the cost performance category are specific to certain clinical conditions and/or care settings. Some MIPS eligible clinicians might not have the sufficient volume threshold for any or all of the episode-based measures for two consecutive performance periods, making year over year improvement

scoring at the measure level less viable. Measure level improvement scoring might negatively impact these clinicians' overall cost performance category scoring because of the inclusion of episode-based measures outside of their scope of practice. Further in the CY 2018 Quality Payment Program final rule (82 FR 53750) we received comments in favor of category level assessment for cost improvement scoring because of concerns with the inclusion of episode-based measures and their potential growth for the cost performance category. Specifically, the concerns highlighted that determining improvement scoring at the measure level might be unfair; it would be difficult for all MIPS eligible clinicians to demonstrate improvement across all measures. A category level assessment provides an equitable cost improvement scoring for MIPS eligible clinicians with different scopes of practice because it would only reflect measures that are applicable to them.

(E) Proposed Modifications for Cost Improvement Scoring Methodology Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In light of both the mathematical and operational feasibility issues with our current cost improvement scoring methodology, we are proposing two modifications beginning with the CY 2023 performance period/2025 MIPS payment year.

First, we propose to determine each MIPS eligible clinician's cost improvement score at the category level, instead of the current measure level, beginning with the CY 2023 performance period/2025 MIPS payment year. We propose this modification based on the operational feasibility considerations previously discussed. We also propose that, if this proposal is finalized, § 414.1380(b)(2)(iv)(A) and (C) would be amended to reflect that the cost improvement score will be determined at the category level for the cost performance category. In addition, we propose that, if this proposal is finalized, § 414.1380(b)(2)(iv)(B) would be amended to reflect that we would determine whether sufficient data are available to measure improvement to calculate the cost improvement score based on whether a MIPS eligible clinician

or group participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the cost performance category for 2 consecutive performance periods.

Second, we propose to modify the cost improvement scoring methodology to remove the requirement that we compare measures with a “statistically significant change (improvement or decline) in performance” as determined based on application of a t-test beginning with the CY 2023 performance period/2025 MIPS payment year. As previously discussed in section IV.A.4.g.(1)(d)(i)(C) of this proposed rule, determining cost improvement scoring based on statistical significance, using a t-test, is not congruent with our underlying data and is mathematically infeasible.

As such, we are proposing to remove the statistical significance requirement and update the calculation on how we quantify cost improvement scoring accordingly. Specifically, at § 414.1380(b)(2)(iv)(C), we are proposing to determine the cost improvement score at the category level by subtracting the cost performance category score from the previous performance period (for example, CY 2022 performance period/2024 MIPS payment year) from the cost performance category score from the current performance period (for example, CY 2023 performance period/2025 MIPS payment year), and then by dividing the difference by the cost performance category score from the previous performance period (for example, CY 2022 performance period/2024 MIPS payment year), and by dividing by 100.

In our current and established policy set forth at § 414.1380(b)(2)(iii), the overall cost performance category score for the current year with the improvement assessment is based on the following calculation: Cost Performance Category Score = Current Year Performance Score + Improvement Score. We do not propose any changes to this established policy.

The following is an example to illustrate how the cost improvement score will be calculated if our two proposals to modify our cost improvement scoring policies are adopted.

An individual clinician, using the same identifier (TIN A / NPI 1) for two consecutive performance periods, has a cost performance category score of 52.00 percent from the previous year, and 63.71 percent in the current year. Using our proposed change, at § 414.1380(b)(2)(iv)(C), to determine the cost improvement score at the category-level, without using statistical significance, the first step is to quantify the change between current performance period score and the previous performance period score. This is 63.71 percent - 52.00 percent, which equals 11.71 percent. Then, the cost improvement score is determined as follows: ((change between current and previous year performance scores / previous year performance score)) / 100. This is ((11.71 percent / 52 percent) / 100). Therefore, the cost improvement score for the current year is 0.23 percentage points.

TABLE 49: Example of Assessing Improvement in the Cost Performance Category

Performance Year	Clinician	Performance Score	Change between Current and Previous Years	Improvement Score
Previous Year	TINA/NPI 1	52.00%	-	-
Current Year	TINA/NPI 1	63.71%	11.71%	0.23 pp

*pp = percentage point

Based on our current and established policy, set forth at § 414.1380(b)(2)(iii), the overall cost performance category score for current performance period is current year performance score + improvement score. This is 63.71 percent + 0.23 percentage point, which equals 63.94 percent.

Lastly, to determine how many points the cost performance category contributes to the final score as set forth in § 414.1380(c)(1), the current year cost performance category score (63.94 percent) is multiplied by the weight of the cost performance category (30 percent of the final score) and by 100 to determine the points to the final score. The individual clinician would have 63.94 percent x 30 percent x 100 = 19.18 points cost performance category contribution to the final score.

We are proposing that these two modifications to our cost improvement scoring policy would be effective beginning with the CY 2023 performance period/2025 MIPS payment year. As discussed previously in section IV.A.4.g.(1)(d)(i)(A) of this proposed rule, section 1848(q)(5)(D)(i) of the Act requires that we account for a MIPS eligible clinician's improvement in the cost performance category if we have sufficient data available to measure improvement. Because we have not implemented cost improvement scoring to date, we did not have sufficient data available to measure year-over-year improvement scoring for the cost performance category until the CY 2023 performance period/2025 MIPS payment year. However, we do have such sufficient data available beginning with the CY 2023 performance period/2025 MIPS payment year. Further, section 1848(q)(5)(D)(iii) of the Act, requiring that we delay our implementation of cost improvement scoring through the CY 2021 performance period/2023 MIPS payment year, no longer applies. Therefore, we are proposing to implement cost improvement scoring, with these two proposed modifications, beginning with the CY 2023 performance period/2025 MIPS payment year.

On this basis, we are proposing to amend § 414.1380(b)(2)(iv)(E) to state that the maximum cost improvement score for the 2020, 2021, 2022, 2023, and 2024 MIPS payment years is zero percentage points and that the maximum cost improvement score beginning with the CY 2025 MIPS payment year is 1 percentage point. In addition, we are proposing to amend § 414.1380(a)(1)(ii) to state that improvement scoring is available in the cost performance category starting with the 2025 MIPS payment year, instead of the 2024 MIPS payment year. The remainder of the language currently at § 414.1380(a)(1)(ii) will remain the same.

We are soliciting public comment on these proposals.

f. MIPS Payment Adjustments

(1) Background

Section 1848(q)(6)(A) of the Act requires that we specify a MIPS payment adjustment factor for each MIPS eligible clinician for a year. This MIPS payment adjustment factor is a percentage determined by comparing the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. The MIPS payment adjustment factors specified for a year must result in differential payments such that MIPS eligible clinicians with final scores above the performance threshold receive a positive MIPS payment adjustment factor, those with final scores at the performance threshold receive a neutral MIPS payment adjustment factor, and those with final scores below the performance threshold receive a negative MIPS payment adjustment factor.

For previously established policies regarding our determination and application of MIPS payment adjustment factors to each MIPS eligible clinician, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2022 PFS final rule (86 FR 65527 through 65537), and CY 2023 PFS final rule (87 FR 70096 through 70102).

In the CY 2023 PFS final rule (87 FR 70096 through 70102), we established the performance threshold for the CY 2023 performance period/2025 MIPS payment year by calculating the mean of the final scores for all MIPS eligible clinicians using CY 2017 performance period/2019 MIPS payment year data. In addition, we included information about our timing for providing MIPS performance feedback to MIPS eligible clinicians for the CY performance period in accordance with section 1848(q)(12) of the Act.

(2) Establishing the Performance Threshold

(a) Statutory Background and Authority

As discussed above, in order to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with Section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a "prior period" specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years.

Sections 1848(q)(6)(D)(ii) through (iv) of the Act provided special rules, applicable only for certain initial years of MIPS, for our computation and application of the performance threshold for our determination of MIPS payment adjustment factors. Specifically, for the CY 2017 performance period/2019 MIPS payment year through CY 2022 performance period/2024 MIPS payment year, section 1848(q)(6)(D)(ii) of the Act required that we establish an additional performance threshold for determining additional positive MIPS payment adjustment factors applicable to MIPS eligible clinicians with exceptional performance. Then, for the CY 2017 performance period/2019 MIPS payment year through CY 2021 performance period/2023 MIPS payment year, section 1848(q)(6)(D)(iii) required that we establish a performance threshold based on a period prior to such performance periods and take into account available data with respect to performance on measures and activities that we may use under the four MIPS performance categories and other factors determined appropriate by the Secretary. Specifically, section 1848(q)(6)(D)(iii) of the Act addressed how we would establish a performance threshold for MIPS in its initial years prior to having final score data available from prior periods of MIPS. Finally, for the CY 2019 performance period/CY 2021 MIPS payment year through CY 2021 performance period/2023 MIPS payment year, section 1848(q)(6)(D)(iv) of the Act required that we methodically increase the performance threshold each year to "ensure a gradual and

incremental transition” to the performance threshold we estimated would be applicable in the CY 2022 performance period/2024 MIPS payment year. Although sections 1848(q)(6)(D)(ii) through (iv) of the Act are no longer applicable for establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year, these previously applicable statutory requirements explain our prior computations of the performance threshold that impact our policy considerations for establishing the performance threshold for MIPS going forward.

In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean as the methodology for determining the performance threshold for the CY 2022 through 2024 performance periods/2024 through 2026 MIPS payment years. We also established in our regulation at 42 CFR 414.1405(g) that, for the CY 2022 performance period/2024 MIPS payment year through the CY 2024 performance period/2026 MIPS payment year, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period. For CY 2022 through CY 2023 performance periods/2024 through 2025 MIPS payment years, we selected a single performance period when selecting a prior period to compute the mean of the final scores and establish the performance threshold. However, as discussed under paragraph (b) of this section, we propose to modify and refine our policy for selecting a “prior period” to establish the performance threshold under paragraph (b) of this section.

For further information on our current performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53792), CY 2019 PFS final rule (83 FR 59879 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), CY 2022 PFS final rule (86 FR 65527 through 65532), and CY 2023 PFS final rule (87 FR 70096 through 70100).

We codified the performance thresholds for each of the first 7 years of MIPS at § 414.1405(b)(4) through (9). These performance thresholds are shown in Table 50.

TABLE 50: Performance Thresholds for the CY 2017 through CY 2023 Performance Periods/2019 through 2025 MIPS Payment Years

MIPS Performance Period	2017 MIPS Performance Period	2018 MIPS Performance Period	2019 MIPS Performance Period	2020 MIPS Performance Period	2021 MIPS Performance Period	2022 MIPS Performance Period	2023 MIPS Performance Period
Year of MIPS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7
Performance Threshold	3 points	15 points	30 points	45 points	60 points	75 points	75 Points
Change from prior year	N/A	12 points	15 points	15 points	15 points	15 points	0 points

(b) Proposal to Modify Our Policy for Establishing the Performance Threshold Beginning with the CY 2024 Performance Period/2026 MIPS Payment Year

In previous years, we selected a single performance period when selecting a prior period. In this proposed rule, we are reassessing our previous interpretation of “prior period” as described at section 1848(q)(6)(D)(i) of the Act.

Section 1848(q)(6)(D)(i) states that the performance threshold for a year shall be the mean or median (as selected by the Secretary) of the composite performance scores for all MIPS eligible professionals with respect to a “prior period” specified by the Secretary. The use of “prior period” in section 1848(q)(6)(D)(i) of the Act differs from other provisions in the statute which specifically refer to “a year” or “performance period.” For example, section 1848(q)(6)(A) of the Act specifies application of a MIPS adjustment factor for “a year.” Meanwhile, section 1848(q)(4) of the Act specifically defines the term “performance period” for MIPS, requiring that the Secretary shall establish “a performance period (or periods) for a year (beginning with 2019)” and such “performance period (or periods)” shall begin and end prior to the beginning of such “year and be as close as possible to such year.” These statutory provisions governing MIPS clearly distinguish the terms “performance period” and “year” from “prior period” used in section 1848(q)(6)(D)(i) of the Act. If the “prior period” we use to determine the

mean or median of all MIPS eligible clinicians' final scores to establish the performance threshold under section 1848(q)(6)(D)(i) of the Act was intended to be limited to a single year or performance period, we believe the statute would have been more specific on that point rather than using the unique term, "prior period."

Because section 1848(q)(6)(D)(i) of the Act does not specifically refer to "a performance period" or "year" to establish the performance threshold, we believe that the term "prior period" can refer to a time span other than a single year or performance period as long as that "prior period" is specified by the Secretary. More specifically, given our interpretation that "prior period" does not require CMS to select a single performance year as the period, we propose to add § 414.1405(g)(2) to specify that, beginning with CY 2024 performance period/2026 MIPS payment year, a "prior period" for purposes of establishing a performance threshold as identified in § 414.1405(b) is a time span of 3 performance periods. Subsequently, we also propose to redesignate language at § 414.1405(g) which states that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section, as § 414.1405(g)(1).

Recognizing the flexibility of the term, "prior period," we reviewed the data we have available from prior MIPS performance periods, and believe it would be appropriate to specify a "prior period" as three performance periods. Using three performance periods as the prior period would prevent the performance threshold from being dependent on a single potentially anomalous performance period, or on two performance periods, whose mean or median final score may be an outlier compared to other performance periods. The mean or median of final scores over 36 months is less likely to be impacted by unusual fluctuations in performance specific to a shorter time frame, is more likely to reflect clinician performance, and therefore, more appropriate to set the performance threshold. Using the mean or median of final scores of

three performance periods would allow us to include more scores in the computation of the mean or median, and therefore, mitigate the impact of outliers. Further, using three performance periods would also smooth out year-to-year fluctuations in the performance threshold, developing greater consistency and stability in MIPS, and providing more predictability for MIPS eligible clinicians who may wish to set MIPS performance goals. Additionally, as more data become available, we will consider whether a longer time span than three performance periods may be appropriate to mitigate outliers and better reflect clinician performance trends.

In the CY 2022 PFS final rule (86 FR 65531 through 65532), we stated that, under our interpretation of section 1848(q)(6)(D)(i) of the Act at that time, choosing the mean or median from a “prior period” does not allow us to balance scores from multiple years. However, on further reflection, the presence of distinctions in the statute between “prior period” and “performance period” and “year” has prompted us to reevaluate the appropriateness of limiting our establishment of the performance threshold based on a single prior performance period.

We request comments on our proposal to use three performance periods as the “prior period” we use to establish a performance threshold and codify the policy at § 414.1405(g)(2).

(c) Performance Threshold for the CY 2024 Performance Period/2026 MIPS Payment Year

While we chose to use the mean in our methodology for determining the performance threshold for the CY 2022 through 2024 performance periods/2024 through 2026 MIPS payment years, we have not specified which prior period’s mean final score we would use for the CY 2024 performance period/2026 MIPS payment year’s performance threshold. From our review of the data available to us, we identified the mean final scores for each of the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years individually, as well as the mean of the final scores for CY 2017 through CY 2019 performance periods/2019 through 2021 MIPS payment years combined, as shown in Table 51. Based on our proposed definition of “prior period,” we included means of final scores for MIPS eligible clinicians spanning over

three performance periods within Table 51 in addition to a single year performance period. These six values represent the mean final scores for all MIPS eligible clinicians from prior periods that are available for consideration for the CY 2024 performance period/2026 MIPS payment year performance threshold.

We are not considering the means of the final scores for certain prior periods because of issues with the underlying data. First, for the CY 2020 through 2021 performance periods/2022 through 2023 MIPS payment years for the purpose of establishing the performance threshold because we extensively applied our extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE, which we believe resulted in skewing the final scores from those years such that they are not an appropriate indicator for future clinician performance. We announced on April 6, 2020, the application of extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE for the CY 2019 performance period/2021 MIPS payment year (85 FR 19277 through 19278). However, given the timing of the COVID-19 PHE and this announcement, the data was likely minimally impacted because many MIPS eligible clinicians had already submitted the data. Second, the final scores for the CY 2022 performance period/2024 MIPS payment year were not finalized in time for this proposed rule and, therefore, the mean final score for the CY 2022 performance period/2024 MIPS payment year is not included for consideration as a potential performance threshold value for the CY 2024 performance period/2026 MIPS payment year.

TABLE 51: Possible Values for the CY 2024 Performance Period/2026 MIPS Payment Year Performance Threshold

2017 Performance Period	2018 Performance Period	2019 Performance Period	2020 Performance Period	2021 Performance Period	2017-2019 MIPS Performance Periods
74.65 Points	87.00 Points	85.63 Points	89.47 Points	89.22 Points	82.06 Points

As shown in Table 51, the mean final scores available for consideration for the CY 2024 performance period/2026 MIPS payment year performance threshold cover a range of values from 74.65 points to 89.47 points (rounded to 75 points and 89 points, respectively). We propose to use the CY 2017 through CY 2019 performance periods/2019 through 2021 MIPS payment years (mean of 82 points, rounded down from 82.06 points) as the prior period for the purpose of establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year for several reasons.

First, as stated above in section IV.A.4.h.(2)(b) of this proposed rule, we believe using the mean or median of final scores across three performance periods would smooth out year-to-year fluctuations in the performance threshold, developing greater consistency and stability in MIPS, and providing more predictability for MIPS eligible clinicians who may wish to set MIPS performance goals. This would also allow us to include more scores in the computation of the mean or median, and therefore mitigate the impact of unusual fluctuations in performance specific to a 24-month or a 12-month timeframe. For example, since we applied extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) (85 FR 19277 through 19278) for the CY 2019 performance period/2021 MIPS payment year, we believe using the additional 24 months of data from the CY 2017 and 2018 performance periods/2019 and 2020 MIPS payment years will allow us to mitigate any potential impact of outliers in computing the mean to establish the performance threshold.

Second, we also believe continuing a gradual and incremental increase in the performance threshold by establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year at 82 will provide stability to MIPS eligible clinicians. This proposed performance threshold value would be an increase of nearly 7 points from the CY 2023 performance period/2025 MIPS payment year performance threshold of 75 points. This increase would be smaller than the 12-to-15-point increases in previous years, apart from the CY 2023

performance period/2025 MIPS payment year, during which the performance threshold remained the same as the previous year. We note that the incremental and gradual increase is no longer required by section 1848(q)(6)(D)(iv) of the Act. However, we still believe that in the long term, the program is served by incremental and gradual changes, such as an increase in the performance threshold to best reflect MIPS eligible clinicians' recent performance by using data from later years. We also believe an incremental and gradual change in the performance threshold for the CY 2024 performance period/2026 MIPS payment year is appropriate as the PHE for COVID-19 concludes.

Finally, we also believe the performance threshold of 82 strikes an appropriate balance of using more robust data and yet accounting for clinician practices that are still recovering from the impacts of the COVID-19 PHE. If we were to use more recent data from CY 2018 performance period/2020 MIPS payment year or CY 2019 performance period/2021 MIPS payment year means, the increase would be more substantial than the incremental increase to 82.

The CY 2023 performance period/2025 MIPS payment year is the only year for which we did not increase the performance threshold from the prior year due to reasons noted in the CY 2023 PFS final rule (87 FR 70096 through 70100). First, we acknowledged that we removed transition policies, such as quality bonus points which had been established for scoring the quality performance category for the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years (86 FR 65491 through 65507). Second, we stated that, for the CY 2019 through 2021 performance periods/2021 through 2023 MIPS payment years, we applied certain extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE, which resulted in the reweighting of some performance categories if data were not submitted for a MIPS eligible clinician. Given the elimination of those transition policies, as well as the possibility the performance categories will not be reweighted for as many MIPS eligible clinicians for the CY

2023 performance period/2025 MIPS payment year, we expected the mean final score for CY 2023 performance period/2025 MIPS payment year to be lower than the mean final scores from the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years. On these bases, we established the performance threshold at 75 for the CY 2023 performance period/2025 MIPS payment year, without any change from the prior year (87 FR 70096 through 70100).

However, for the CY 2024 performance period/2026 MIPS payment year, we no longer need to account for those reasons stated in CY 2023 PFS final rule (87 FR 70096 through 70100) and explained above, and therefore, believe it is appropriate to increase the performance threshold. For example, the COVID-19 PHE expired on May 11, 2023, emphasizing the less unpredictable impact of the COVID-19 PHE on health systems' expenditures and resources.³¹⁹ In addition, we no longer believe we need to consider MIPS transition policies because they are no longer in effect and clinicians have now had several years of experience in reporting within MIPS, which has been in effect for seven years. Finally, we believe that, as clinicians gain more experience within the MIPS program and as more recent data are available, we should incorporate more recent data in determining the performance threshold. We believe our proposal to use the mean of the final scores for the CY 2017 through 2019 performance periods/2019 through 2021 MIPS payment years as the prior period for the purpose of determining the performance threshold for the CY 2024 performance period/2026 MIPS payment year achieves an appropriate balance.

Under this proposal, and pursuant to the methodology we established previously at § 414.1405(g), the performance threshold for the CY 2024 performance period/2026 MIPS payment year would be the mean of the final scores for all MIPS eligible clinicians for the CY

³¹⁹ <https://aspr.hhs.gov/legal/PHE/Pages/covid19-11Jan23.aspx>;
<https://www.nytimes.com/2023/01/30/us/politics/biden-covid-public-health-emergency.html>.

2017 through 2019 performance periods/2019 through 2021 MIPS payment years, which is 82 points (rounded from 82.06 points). We are proposing corresponding changes to § 414.1405(b)(9) to reflect this proposal.

Alternatively, as an effort to use more recent data, we considered using the single 2019 performance period/2021 MIPS payment year, with a mean of 86 (rounded from 85.63) to establish the performance threshold for the CY 2024 performance period/2027 MIPS payment year. However, in efforts to use more robust data from a longer period of time, we are proposing using the CY 2017 through 2019 performance period/2019 through 2021 MIPS payment year as the prior period, with its mean of 82 points, to set the performance threshold for the CY 2024 performance period/2026 MIPS payment year. We also believe the performance threshold of 82 instead of 86 would be more appropriate for clinician practices that are still recovering from the impacts of the COVID-19 PHE.

In the Regulatory Impact Analysis (RIA) in section VII.E.23.d.(4) of this proposed rule, we estimate that approximately 46 percent of MIPS eligible clinicians would receive a negative payment adjustment for the CY 2024 performance period/2026 MIPS payment year if the policies proposed in this proposed rule are finalized and the performance threshold is equal to 82 points. We refer readers to the alternatives considered in the RIA in section VII.F.4 of this proposed rule where we present the impact of using data from alternative years to determine the performance threshold for the CY 2024 performance period/2026 MIPS payment year.

We are requesting comments on this proposal, as well as whether we should use means of final scores from alternative years to set the performance threshold for the CY 2024 performance period/2026 MIPS payment year, which we considered and discussed in the RIA in section VII.F.4 of this proposed rule.

(3) Example of Adjustment Factors

Figure 1 provides an illustrative example of how various final scores will be converted to a MIPS payment adjustment factor using the statutory formula and based on our proposed policies for the CY 2024 performance period/2026 MIPS payment year. In Figure 1, the performance threshold is set at 82 points, as we have proposed in section IV.A.4.h.(2)(c) of the proposed rule.

For purposes of determining the maximum and minimum range of potential MIPS payment adjustment factors, section 1848(q)(6)(B) of the Act defines the applicable percentage as 9 percent for the CY 2024 performance period/2026 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment.

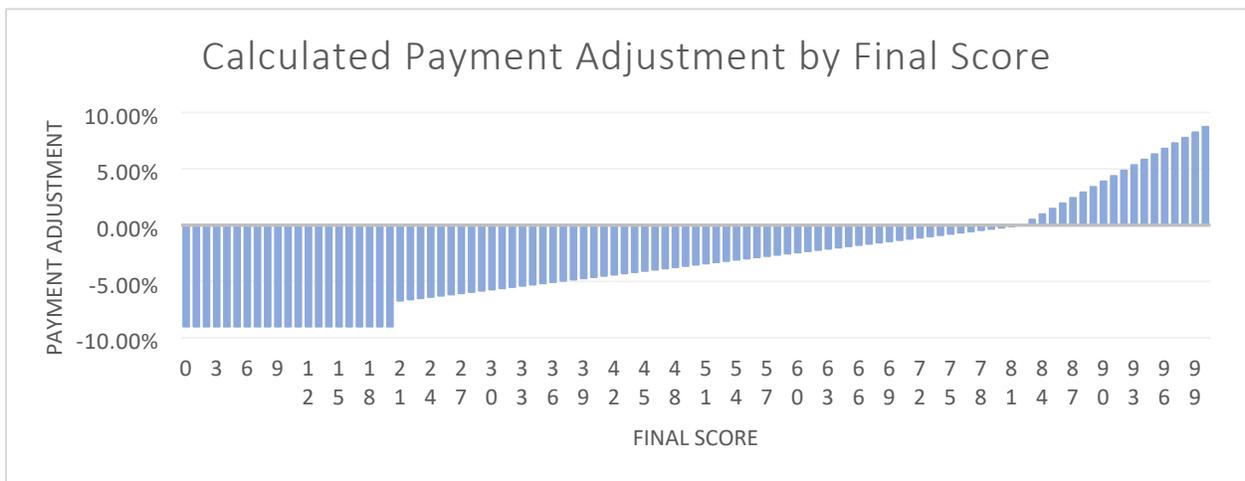

However, there are two modifications to this linear sliding scale. First, as specified in section 1848(q)(6)(A)(iv)(II) of the Act, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 20.5 points based on the performance threshold of 82 points for the CY 2024 performance period/2026 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive a negative MIPS payment adjustment factor equal to 9 percent (the applicable percentage). Second, the linear sliding scale for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0, as required by section 1848(q)(6)(F)(i) of the Act.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent (the applicable percentage). If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS eligible clinicians with a final score equal to 82 points (the proposed performance

threshold for the CY 2024 performance period/2026 MIPS payment year) would receive a neutral MIPS payment adjustment.

Beginning with the CY 2023 performance period/2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act is no longer available. For this reason, Figure 1 does not illustrate an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

FIGURE 1: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold for the CY 2024 performance period/2026 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 52 illustrates the changes in payment adjustment based on the final policies from the CY 2023 PFS final rule (87 FR 70096 through 70103) for the CY 2023 performance period/2025 MIPS payment year and the proposed policies for the CY 2024 performance period/2026 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

TABLE 52: Illustration of Point System and Associated Adjustments Comparison between the CY 2023 Performance Period/2025 MIPS Payment Year and the Proposed CY 2024 Performance Period/2026 MIPS Payment Year

2023 Performance Period		2024 Performance Period	
Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment
0.0-18.75	Negative 9%	0.0-20.5	Negative 9%
18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	20.51-81.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
75.0	0% adjustment	82.0	0% adjustment
75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00 This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	82.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 86.00 to 100.00 This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.

g. Review and Correction of MIPS Final Score

(1) Feedback and Information to Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

We made performance feedback available for the CY 2019 performance period/2021 MIPS payment year on August 5, 2020; for the CY 2020 performance period/2022 MIPS payment year on August 2 and September 27, 2021; and for the CY 2021 performance period/2023 MIPS payment year on August 22, 2022. Although we aim to provide feedback for

the CY 2022 performance period/2024 MIPS payment year on or around July 1, 2023, it is possible the release date could be later depending on circumstances. We direct readers to qpp.cms.gov for more information.

K. Targeted Review

a. Background

Section 1848(q)(13)(A) of the Act requires that the Secretary establish a process under which a MIPS eligible clinician may seek an informal review of the calculation of the MIPS adjustment factor (or factors) applicable to the MIPS eligible clinician. In the CY 2017 Quality Payment Program final rule (81 FR 77353 through 77358), we finalized a targeted review process and related requirements under MIPS wherein a MIPS eligible clinician or group may request a review of the calculation of the MIPS payment adjustment factor and, as applicable, the calculation of the additional MIPS payment adjustment factor applicable to such MIPS eligible clinician or group for a year. Currently, MIPS eligible clinicians, groups, and Alternative Payment Model (APM) entities may request and receive targeted review of our calculation of their MIPS payment adjustment factor(s) under our established process and related requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77546), we codified the MIPS targeted review process and related requirements at § 414.1385(a).

In the CY 2020 PFS final rule (84 FR 63045 through 63049), we revised the MIPS targeted review process and related requirements to address persons eligible to request targeted review, timeline for submission of targeted review requests, denial of targeted review requests, our requests for additional information, notification of targeted review decisions, and scoring recalculations. We codified these revisions to the targeted review process and related requirements at § 414.1385(a) (84 FR 63197 through 63198).

Currently, as specified at § 414.1385(a)(2), we provide that all requests for targeted review must be submitted within a 60-day period, beginning on the day that we make available

the MIPS payment adjustment factors for the MIPS payment year applicable to each MIPS eligible clinician. In addition, § 414.1385(a)(2) provides that we may extend the targeted review request submission period. However, this current submission period for MIPS targeted review presents significant challenges to CMS as we seek to implement application of a differentially higher PFS conversion factor for eligible clinicians who are Qualifying APM Participants (QPs) for a year beginning with the CY 2024 QP Performance period/2026 payment year, as required by section 1848(d)(1)(A) of the Act.

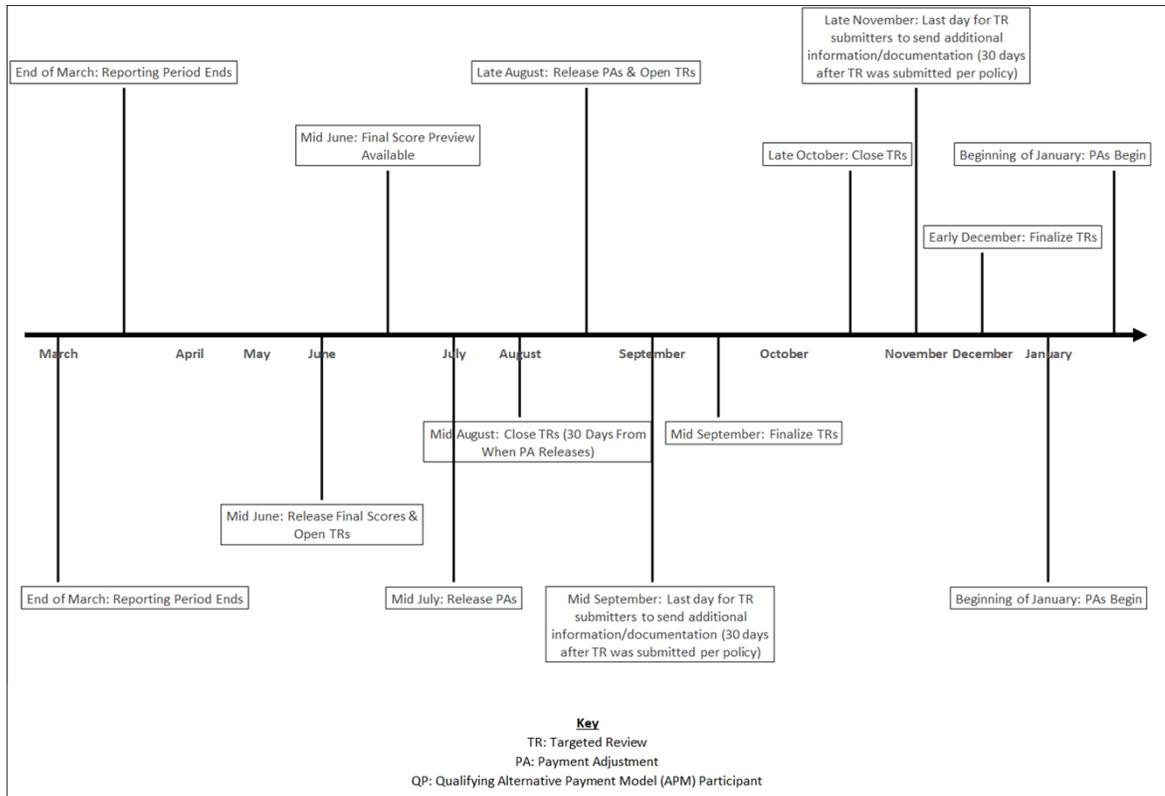

Specifically, to ensure application of the alternative conversion factor for eligible clinicians who are QPs, we must submit the final list of QPs to our Medicare Administrative Contractors no later than October 1st of the preceding year. However, under our current targeted review timeline for MIPS, this information would not be available until the first week of December. This is because the targeted review request submission period begins upon notification of the MIPS payment adjustment factors, which takes place sometime in August, and ends 60 days later, sometime in November. While QPs are excluded from MIPS reporting and any MIPS payment adjustment, we have received and addressed several requests for targeted review based on a clinician disputing whether they should be designated as a QP or a MIPS eligible clinician for purposes of payment under the Quality Payment Program. Based on our experience, we have found that more often than not a MIPS eligible clinician was initially identified as a QP but did not in fact participate in an Advanced APM and, conversely, a MIPS eligible clinician who believes they had achieved QP status was not identified as such. The targeted review process allows for clinicians to bring these issues to our attention. Accordingly, the targeted review process is essential to compiling an accurate list of QPs, which is necessary for purposes of determining who receives the application of the higher PFS conversion factor (also known as “qualifying APM conversion factor”) of 0.75 percent (versus non-QPs, who receive 0.25 percent).

Section 1848(q)(13)(A) of the Act does not specify a timeframe for targeted review, broadly requiring that we “establish a process” for informal review of our calculation of the MIPS adjustment factor. Section 1848(q)(13)(A) of the Act only requires that the targeted review process permit a MIPS eligible clinician to seek “informal review of the calculation of the MIPS adjustment factor (or factors)” applicable to the MIPS eligible clinician for a MIPS payment year. We believe this broad authority for establishing this targeted review process, and lack of specificity as to any timeframe required for such process, permits CMS to determine a reasonable time period for submission of a request for targeted review so long as a MIPS eligible clinician can submit a request after we have informed them of our calculation of their MIPS adjustment factor(s).

Therefore, we are proposing to permit submission of a request for targeted review beginning on the day we make available the MIPS final score and ending 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year. This proposal will allow for a total of approximately 60 days for the targeted review submission period (approximately 30 days before publication of the MIPS payment adjustments factors and 30 days thereafter). We believe this proposal will provide us with the necessary time to adjudicate the targeted reviews and finalize the QP status list by October 1st. If finalized, we are proposing to codify this proposed modification to this policy at § 414.1385(a)(2).

In Figure 2, we illustrate our proposed change to the timeline of the targeted review. The text above the timeline reflects the current process for targeted review while the text below the timeline reflects the proposed process in Figure 2.

FIGURE 2: Current and Proposed Targeted Review Process

To further shorten the timeline of the targeted review process for the reasons discussed above, we also are proposing to amend § 414.1385(a)(5). Specifically, we are proposing to require that, if CMS requests additional information under the targeted review process, that that additional information must be provided to and received by CMS within 15 days of receipt of such request. This proposal would modify the current timeline to respond to CMS’ request set forth at § 414.1385(a)(5), which is within 30 days of receipt.

In the CY 2017 Quality Payment Program final rule (81 FR 77353 through 77358), we implemented a virtual groups participation option under MIPS. Since virtual groups are eligible to submit data to the MIPS program, we are proposing to add virtual groups as being eligible to submit a request for targeted review. Finally, as discussed in section IV.A.4.d (4) of this proposed rule, we are also proposing to add subgroups as being eligible to submit a request for targeted review. We are proposing to codify these additions at § 414.1385(a).

We invite public comment on these proposals.

k. Third Party Intermediaries General Requirements

(1) Codification of Previously Finalized Policy From Preamble

A third party intermediary is an entity that CMS has approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories (§ 414.1305). Many of the policies that apply to third party intermediaries were finalized through prior rulemaking but not codified in the CFR. Among other things, this has made it challenging for third party intermediaries to track certain program requirements and has caused confusion for MIPS participants and third party intermediaries.

We have reviewed the previously finalized language and identified policies that we believe should be codified for these reasons. We describe these proposals and provide background throughout this section.

(2) General Requirements

(a) Background

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84926 through 84947), the CY 2022 PFS final rule (86 FR 65538 through 65550), and the CY 2023 PFS final rule (87 70102 FR through 70109) for our previously established policies regarding third party intermediaries. Where we are proposing to codify existing final policy, we incorporate the rationale described in these prior rules by reference.

In this proposed rule, in addition to codifying previously finalized policies and making technical updates for clarity, we propose to: (1) Add requirements for third party intermediaries to obtain documentation; (2) Specify the use of a simplified self-nomination process for existing qualified clinical data registries (QCDRs) and qualified registries; (3) Add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (4) Add a requirement for QCDRs and qualified registries to attest that information on the qualified posting is correct; (5) Modify requirements for QCDRs and qualified registries to support MVP reporting; (6) Specify requirements for a transition plan for QCDRs and qualified registries; (7) Specify requirements for data validation audits; (8) Add additional criteria for rejecting QCDR measures; (9) Add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (10) Eliminate the Health IT vendor category; (11) Add failure to maintain updated contact information as criteria for remedial action; (12) Revise corrective action plan requirements; (13) Specify the process for publicly posting remedial action; and (14) Specify the criteria for audits.

(b) Requirement to Obtain Documentation

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 and 77385), we established requirements that QCDRs and qualified registries obtain signed documentation from clinicians and groups regarding their authority to handle and submit data on the clinician and group's behalf. We established that QCDRs and qualified registries must enter into appropriate Business Associate Agreements with MIPS eligible clinicians. QCDRs and qualified registries must obtain signed documentation that each holder of a national provider identifier (NPI) has authorized the third party intermediary to submit "quality measure results, improvement activities measure and activity results, advancing care information objective results and numerator and denominator data or patient-specific data on Medicare and non-Medicare beneficiaries to CMS for the purpose of MIPS participation." The documentation

should be annually obtained at the time the clinician or group enters into an agreement with the QCDR or qualified registry for the submission of MIPS data to the QCDR or qualified registry. A group, subgroup, Virtual Group, or APM Entity may have their authorized representative give permission to the third party intermediary to submit their data. Additionally, in the CY 2018 Quality Payment Program final rule (82 FR 53812), we clarified that Business Associate Agreements must comply with the HIPAA Privacy and Security Rules. Records of the authorization must be maintained for 6 years after the performance period ends (81 FR 77370). We propose to codify these requirements at § 414.1400(b)(3)(xii) and (xiii).

We invite comments on this proposal.

(c) Requirement to Report in Form and Manner Specified

(i) Criteria for Data Submission

At § 414.1400(a)(2)(C), we require that all data submitted by a third party intermediary must be submitted in the form and manner specified by CMS. We are specifying that these requirements include the obligation for a third party intermediary to: (1) report the number of eligible instances (reporting denominator); (2) report the number of instances a quality service is performed (performance numerator); (3) report the number of performance exclusions, meaning the quality action was not performed for a valid reason as defined by the measure specification; (4) comply with a CMS-specified secure method for data submission, such as submitting the QCDR's data in an XML file; (5) be able to calculate and submit measure-level reporting rates or the data elements needed to calculate the reporting and performance rates by taxpayer identification number (TIN)/NPI and/or TIN; (6) be able to calculate and submit a performance rate (that is the percentage of a defined population who receive a particular process of care or achieves a particular outcome based on a calculation of the measures' numerator and denominator specifications) for each measure on which the TIN/NPI or TIN reports; (7) provide the performance period start date the QCDR will cover; (8) provide the performance period end

date the QCDR will cover; (9) report the number of reported instances, performance not met, meaning the quality actions was not performed for no valid reason as defined by the measure specification; and (10) submit quality, advancing care information, or improvement activities data and results to us in the applicable MIPS performance categories for which the QCDR is providing data (81 FR 77367 through 77369 and 77384 through 77385). These criteria for data submission are technical requirements of functioning QCDRs and qualified registries.

(ii) Reporting on All Patients, Including Non-Medicare Patients

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries are required to submit data on all patients, not just Medicare patients. In section IV.A.4.f.(1)(b) of this rule, we propose a revision to the definition of the term collection type to allow Shared Saving Program ACOs meeting the reporting requirements under the APP to report on a subset of patients that is partially defined by having the payer of Medicare. We propose to codify our previously established requirement that data submitted by third party intermediaries must include data on all of the MIPS eligible clinician's patients regardless of payer, with the addition of the phrase "unless otherwise specified by the collection type" at § 414.1400(a)(3)(ii)(A). We invite comments on this proposal.

(3) Requirements for QCDRs and Qualified Registries

(a) Background

As described at § 414.1305, a QCDR is an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. Section 1848(q)(5)(B)(ii) of the Act provides that the Secretary shall encourage MIPS eligible professionals to report on applicable

measures through the use of certified EHR technology (CEHRT) and qualified clinical data registries.

We refer readers to § 414.1400(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77374 and 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 and 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID-19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84937 through 84944), the CY 2022 PFS final rule (86 FR 65540 through 65550) and the CY 2023 PFS final rule (87 FR 70103 through 70106) for previously finalized standards and criteria for QCDRs and QCDR measure requirements.

As described at § 414.1305, a qualified registry is a medical registry, a maintenance of certification program operated by a specialty body of the American Board of Medical Specialties or other data intermediary that, with respect to a particular performance period, has self-nominated and successfully completed a vetting process (as specified by CMS) to demonstrate its compliance with the MIPS qualification requirements specified by CMS for that performance period. The registry must have the requisite legal authority to submit MIPS data (as specified by CMS) on behalf of a MIPS eligible clinician or group to CMS.

We refer readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77382 and 77386), the CY 2018 Quality Payment Program final rule (82 FR 53815 and 53818), the CY 2019 PFS final rule (83 FR 59906), the CY 2020 PFS final rule (84 FR 63074 through 63077), the CY 2021 PFS final rule (85 FR 84944 through 84947), and the CY 2022 PFS final rule (86 FR 65539 through 65548) for previously finalized standards and criteria for qualified registries.

(b) Self-Nomination and Program Requirements

(i) Subgroup Reporting

In the CY 2022 Quality Payment Program final rule (86 FR 65544), we established the requirement that third party intermediaries must support subgroup reporting beginning with the CY 2023 performance period/2025 MIPS payment year. This requirement that third party intermediaries support subgroup reporting was finalized because it would allow for clinicians to meaningfully report MIPS Value Pathways (MVPs) given that subgroups will be implemented concurrently with MVPs. We propose to add new language to codify this policy. We propose to revise § 414.1400(b)(1)(iii) that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support subgroup reporting.

We invite comments on this proposal.

(ii) Simplified Self-Nomination Process for Existing QCDRs and Qualified Registries in MIPS, That Are in Good Standing

In the CY 2018 Quality Payment Program final rule (82 FR 53811 through 53812 and 53817 through 53818), we established that beginning with the CY 2019 performance period/2021 MIPS payment year, QCDRs and qualified registries in good standing (that is, QCDRs and qualified registries that are not on probation or disqualified) (81 FR 77386 through 77389) that “wish to self-nominate using the simplified process can attest, in whole or in part, that their previously approved form is still accurate and applicable” (see also § 414.1400(b)(2)). When this is the case, third party intermediaries may use the simplified process. The goal of the simplified self-nomination form is to reduce the self-nomination burden for third party intermediaries in good standing by allowing them to self-nominate with a mostly pre-populated self-nomination form. The policy allows third party intermediaries to attest that sections of their application have no changes even if there are minimal changes or substantive changes in other parts of their application. An example of a minimal change is adding or removing MIPS quality measures. An example of a substantive change is new QCDR measures for consideration. For

sections of an application that do require changes, the requirements are the same as those for the normal self-nomination process (82 FR 53808).

In the course of implementing this policy, we have learned that the text of § 414.1400(b)(2) has confused some third party intermediaries such that they have attested that their previously approved self-nomination form is still accurate and have not submitted self-nomination forms because they thought they did not need to do so if they had no changes. We are proposing to revise § 414.1400(b)(2) to reflect that QCDRs and qualified registries are still required to submit their self-nomination form even if they utilize the simplified self-nomination process. Even if a third party intermediary has no change to make to its form from the previous year, there may be new sections to fill out and they need to respond to attestations within the course of the application. We propose to revise the last sentence of § 414.1400(b)(2) from “For the CY 2019 performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period” to state, “For the CY 2019 performance period/2021 MIPS payment year and future years, an existing QCDR or qualified registry that is in good standing may use the simplified self-nomination process during the self-nomination period, from July 1 and September 1 of the CY preceding the applicable performance period.” This proposal would ensure that third party intermediaries that have previously participated in MIPS and are in good standing can use the process to reduce the burden of self-nomination.

We invite comments on this proposal.

(iii) Measure Numbers and Identifiers and Titles for the Improvement Activity Performance Category, the Promoting Interoperability Performance Category, and MVPs

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must provide the

measure numbers for the MIPS quality measures on which the QCDR and qualified registry is reporting. We propose to codify this previously finalized provision at § 414.1400(b)(3)(ix). For completion and consistency, we also need to receive identifiers for improvement activities, Promoting Interoperability, and titles for MVPs. This information is used to track which quality measures, improvement activities, Promoting Interoperability performance category measures and MVPs QCDRs and qualified registries support in a performance period. This information is available on the qualified postings that are published on the QPP Resource Library. We propose that § 414.1400(b)(3)(ix) would additionally require QCDRs and qualified registries to submit to CMS the identifiers for the improvement activity performance category, the Promoting Interoperability performance category measures, and titles for MVPs.

We invite comments on this proposal.

(iv) Quality Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that one criterion for data submission for QCDRs and qualified registries is that they must be able to submit results to CMS for at least six individual quality measures with at least one outcome measure during self-nomination. If an outcome measure is not available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure. We propose to codify this previously finalized provision at § 414.1400(b)(3)(x).

We invite comments on this proposal.

(v) Qualified Posting Attestation

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must sign a document that verifies their “name, contact information, cost for MIPS eligible clinicians or groups to use the qualified registry, services provided, and the specialty-specific measure sets the qualified

registry intends to report.” As technology has progressed, we no longer need third party intermediaries to sign a document and instead require an attestation. We became aware that this requirement is not consistent with our established policy in describing the manner in which the QCDR or qualified registry documents this information. In order to align with current processes, we propose to add § 414.1400(b)(3)(xiv), which would require that QCDRs and qualified registries attest that the information listed on the qualified posting is accurate. The qualified posting contains information to help clinicians, groups, subgroups, virtual groups, APM Entities determine the services, cost, reporting options, measures/activities, etc. that a CMS-approved intermediary supports. We publish it every performance period and update it, as needed. While we have used the term qualified posting since the inception of the Quality Payment Program, we have not previously defined this term, and therefore, we propose to define qualified posting as the document made available by CMS that lists QCDRs or qualified registries available for use by MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities at § 414.1305.

We invite comments on these proposals.

(vi) Data Access Capabilities

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must comply with any request by CMS to review data submitted by a third party intermediary for purposes of MIPS. We propose to codify this previously finalized provision at § 414.1400(b)(3)(xv).

We invite comments on this proposal.

(vii) Attestation of Data Access Capabilities

As was previously described, the CY 2017 Quality Payment Program rule finalized the requirement for third party intermediaries to comply with any request by CMS to review data submitted by a third party intermediary for purposes of MIPS reporting requirements (81 FR 77367 through 77369 and 77384 through 77385). However, it did not require third party

intermediaries to attest to their capabilities. Attestation during the self-nomination period emphasizes the importance of this capability for third party intermediaries even if the capability is not ultimately utilized later. We propose to add § 414.1400(b)(3)(xvi)(A) to require that a QCDR or a qualified registry attest that it has required each MIPS eligible clinician on whose behalf it reports to provide the QCDR or qualified registry with all documentation necessary to verify the accuracy of the data on quality measures that the eligible clinician submitted to the QCDR or qualified registry. We also propose to add § 414.1400(b)(3)(xvi)(B) to require that a QCDR or a qualified registry must attest that it has required each MIPS eligible clinician to permit the QCDR or qualified registry to provide the information described in § 414.1400(b)(3)(xvi)(A) to CMS upon request to ensure that data can be accessed by the third party intermediary for auditing purposes as we have heard from some third party intermediaries that they do not have access to the data and depend on clinicians do the audit.

We invite comments on this proposal.

(viii) Third Party Intermediary Support of MVPs

In the CY 2022 PFS final rule (86 FR 65543), we finalized a new requirement at § 414.1400(b)(1)(ii) that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. This proposal was finalized because MVPs are beginning to be implemented in the CY 2023 performance period/2025 MIPS payment year, and third party intermediaries have the necessary experience reporting data to support MVP reporting.

To further clarify this finalized policy, we responded to a comment in the CY 2022 PFS final rule (86 FR 65543) by explaining that third party intermediaries who support MVPs are required to “support all measures and activities available in the MVP across the quality, improvement activities, and Promoting Interoperability performance categories. The exceptions

to this requirement are the cost measures and population health measures . . . [and] QCDR measures, which are only reportable through a QCDR. In instances where QCDR measures are included in an MVP, a qualified registry or health IT vendor will be expected to support all other quality measures included within the MVP.” Some interested parties have expressed concern regarding this requirement as many MVPs include measures that may be reported by clinicians across multiple specialties, some of whom might be outside their intended customer base. We are concerned that continuing this strict requirement for MVP support could undermine adoption during the time in which MVP submission is an option under MIPS. Given that many third party intermediaries may not support measures for clinicians in all specialty areas that might report a MVP, we are proposing to add a sentence at the end of § 414.1400(b)(1)(ii) that a QCDR or a qualified registry is required to support MVPs pertinent to the specialties they support. The proposed addition states that a QCDRs or a qualified registry must support all measures and improvement activities available in the MVP with two exceptions. The first proposed exception to this requirement at § 414.1400(b)(1)(ii)(A) is that if an MVP includes several specialties, then a QCDR or a qualified registry is only expected to support the measures that are pertinent to the specialty of their clinicians. For example, if an orthopedic care MVP includes both surgery and physical therapy measures, and the third party intermediary caters specifically to physical therapists, they are not required to support the surgical measures. The second proposed exception at § 414.1400(b)(1)(ii)(B) is that QCDR measures are only required to be reported by the QCDR measure owner. In instances where a QCDR does not own the QCDR measures in the MVP, the QCDR may only support the QCDR measures if they have the appropriate permissions.

We invite comments on these proposals.

(ix) Readiness to Accept Data

In the CY 2019 PFS final rule (83 FR 59761), we established that a QCDR or a qualified registry must be up and running by January 1st of the performance period so that they can accept

and retain clinician data starting on January 1st. We propose to codify at § 414.1400(b)(3)(xvii) the requirement that a QCDR or a qualified registry must be able to accept and retain data by January 1 of the applicable performance period.

We invite comments on this proposal.

(x) Duration of Services Provided

In the CY 2020 PFS final rule (84 FR 63053), we finalized a new requirement at § 414.1400(a)(2)(i)(E) that the organization must provide services throughout the entire performance period and applicable data submission period. In section IV.A.4.k.(3)(b)(xi) of this rule, we discuss the requirements for a transition plan for cases in which organizations are not able to provide services throughout the entire year. While we recognize and allow for cases in which organizations may find themselves unable to provide services throughout the course of an entire year, we would require that they indicate their intent to do so as part of program requirements. We propose to modify this requirement to state the organization must certify it intends to provide services throughout the entire performance period and applicable data submission period. We propose to make this change at § 414.1400(a)(2)(i)(C) as a result of our proposal to divide requirements for self-nomination from programmatic requirements as discussed in section IV.A.4.k.(7) of this rule.

We invite comments on these proposals.

(xi) Transition Plan Requirements

In the CY 2020 PFS final rule (84 FR 63052 through 63053), we finalized a new requirement at § 414.1400(a)(2)(i)(F) that prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a

transition plan. As part of an overall effort to divide self-nomination requirements from program requirements as discussed in section IV.A.4.k.(7) of this rule, at § 414.1400, we propose to redesignate and revise paragraph (a)(2)(i)(F) to paragraph (a)(3)(iv) that, prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan by a date specified by CMS. The transition plan must address the following issues, unless different or additional information is specified by CMS. We propose to specify the contents required in the transition plan in paragraphs (a)(3)(iv)(A) through (E). Therefore, we propose to add § 414.1400(a)(3)(iv)(A) to require that the transition plan state the issues that contributed to the withdrawal mid-performance period or discontinuation of services mid-performance period. We also propose to add § 414.1400(a)(3)(iv)(B), which would require that the transition plan state the number of clinicians, groups, virtual groups, subgroups or APM entities inclusive of MIPS eligible, opt-in and voluntary participants that would need to find another way to report and as applicable, and identify any QCDRs that were granted licenses to QCDR measures which would no longer be available for reporting due to the transition. We further propose to add paragraph (a)(3)(iv)(C) to state the steps the third party intermediary will take to ensure that the clinicians, groups, virtual groups, subgroups, or APM Entities identified in § 414.1400(a)(3)(iv)(B)(1) are notified of the transition in a timely manner and successfully transitioned to an alternate third party intermediary, submitter type, or, for any measure or activity on which data has been collected, collection type, as applicable. At paragraph (a)(3)(iv)(D), we propose to require that the transition plan include a detailed timeline of when the third party intermediary will take the steps identified in paragraph (a)(3)(iv)(C), including notification of affected clinicians, groups, virtual

groups, subgroups, or APM Entities, the start of the transition, and the completion of the transition. Finally, we propose to add at paragraph (a)(3)(iv)(E) that the third party intermediary must communicate to CMS that the transition was completed by the date included in the detailed timeline. The proposals would enable CMS to have documentation of the steps, actions, tasks, and timeline for completion of the transition of clients.

We invite comments on these proposals.

(c) Submission Requirements

(i) Risk-adjusted Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77384 through 77385), we established that qualified registries “submitting MIPS quality measures that are risk-adjusted . . . must submit the risk-adjusted measure results to CMS when submitting the data for these measures.” We propose to codify this previously finalized provision at § 414.1400(b)(3)(xi).

We invite comments on this proposal.

(ii) Data Validation Audit Requirements

Section 414.1400(b)(3)(v) outlines the requirements for third party intermediary’s annual data validation audits. As specified at paragraph (b)(3)(v)(E), the QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements: (1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR or qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR or qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR or qualified registry may use a sample size of 50 TIN/NPIs. (2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients. We finalized this policy (81 FR 77366 through 77367) to reflect the number of

reporting entities, which may be individuals, as represented by TIN/NPIs, but are often compositions of TIN/NPIs as represented by groups, subgroups, or APM entities. Since these compositions represent a single unit of measurement, we believe that they should be considered as a single unit.

We have received questions about the required sampling methodology from interested parties who are confused by the references to TIN/NPI in the context of sample size and how they map to individual MIPS eligible clinicians, groups, virtual groups, subgroups or APM Entities. To reduce confusion among third party intermediaries regarding the data validation audit sample, we propose to revise § 414.1400(b)(3)(v)(E)(I) and (2) to replace references to TIN/NPI with “a combination of individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM Entities.” The new text would state: (1) Uses a sample size of at least 3 percent of a combination of individual clinicians, groups, virtual groups, subgroups and APM Entities for which the QCDR or qualified registry will submit data to CMS, except that if the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups and APM Entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM Entities, the QCDR or qualified registry may use a sample size of a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM Entities; and (2) Uses a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM Entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM Entity must include a minimum of 5 patients and need not include more than 50 patients.

We invite comments on this proposal.

(4) Requirements Specific to QCDRs

(a) Background

As described at § 414.1305, a QCDR is an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. Section 1848(q)(5)(ii)(B) of the Act provides that the Secretary shall encourage MIPS eligible professionals to report on applicable measures through the use of CEHRT and qualified clinical data registries.

We refer readers to § 414.1400(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77374 and 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 and 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID-19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84937 through 84944), the CY 2022 PFS final rule (86 FR 65540 through 65550) and the CY 2023 PFS final rule (87 FR 70103 through 70106) for previously finalized standards and criteria for QCDRs and QCDR measure requirements.

(b) QCDR Measure Self-nomination Requirements

(i) New QCDR Measures May Not be Submitted After Self-nomination

In the CY 2017 Quality Payment Program final rule (81 FR 77375 through 77377), we established that QCDRs could submit measures that are not on the annual list of MIPS quality measures as part of the self-nomination process for an entity to become a QCDR. In the CY 2018 Quality Payment Program final rule (82 FR 53808), we established a process by which existing QCDRs that are in good standing could attest that certain aspects of their previous year's approved self-nomination have not changed. We intended for the self-nomination document to be comprehensive in terms of which QCDR measures would be submitted for consideration. However, we have received requests to add measures following the completion of the QCDR self-nomination process for the performance year. Our review process requires consideration of a complete self-nomination with all measures, so we propose to add that the measure was

submitted after self-nomination to our list of reasons for rejecting a QCDR measure at § 414.1400(b)(4)(iv)(O).

We invite comments on this proposal.

(ii) Limitations on Number of QCDR Measures Submitted for Self-nomination

In the CY 2017 Quality Payment Program final rule, we established at § 414.1400(b)(4)(i) that QCDRs must submit certain specifications for QCDR measures that would be considered for approval by CMS (81 FR 77374 through 77378). These measures would then be considered for approval or rejection under the requirements of § 414.1400(b)(4)(iii) and (iv). CMS reviews these measures carefully and each additional measure takes considerable time and effort to review. We have had experiences in which a single QCDR has submitted a large number of QCDR measures for consideration. While we are mindful that there may be a number of valid measure concepts, we are generally trying to focus measurement within the Quality Payment Program. In an effort to optimize resource allocation and encourage QCDRs to focus their submitted measures on those that have the highest value, we are proposing to add at § 414.1400(b)(4)(iv)(P) that a QCDR measure may be rejected if the QCDR submits more than 30 quality measures not in the annual list of MIPS quality measures for CMS consideration. We considered a lower limit given that clinicians in traditional MIPS are only required to report on 6 quality measures and clinicians reporting via MVPs may report even fewer. However, we recognize that some QCDRs serve more diverse clinical populations and could conceivably wish to submit this many as part of self-nominations. We note that we would continue to evaluate individual measures on their merits as specified in our requirements at § 414.1400(b)(4)(iii) and (iv).

We invite comments on this proposal.

(iii) Requirements for Previous Data on QCDR Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77368), we established a requirement that for non-MIPS measures the QCDR must provide us, if available, data from years prior to the start of the performance period. We propose to codify this previously finalized provision at § 414.1400(b)(4)(i)(C).

We invite comments on this proposal.

(iv) Requirement for QCDR Measure Specifications to Remain Published Through the Performance Period and Data Submission Period

In the CY 2017 Quality Payment Program final rule (81 FR 77375 through 77376), we established at § 414.1400(b)(4)(i)(B) that no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the QCDR must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted. While we established when this posting was required, we did not establish a standard for the duration of this posting. We have become aware of situations in which QCDR measure owners have removed this documentation during the course of the performance period or before the closure of the submission period. We propose to revise § 414.1400(b)(4)(i)(B) to add a provision that the approved QCDR measure specifications must remain published through the performance period and data submission period. Although it was not previously specified, it was our intention that this information be made available for the entirety of the time that the measure could be considered and reported by clinicians or groups as part of the Quality Payment Program. Measure specifications must be available throughout the duration of measure use for interested parties to understand the target population of the measure, how the measure is built and calculated, and to identify existing measure gaps. Clinicians may elect to begin collecting data at various times in the year and even if data collection has started, may need to consult specifications throughout the performance period to confirm that data collection is in

concordance with the specifications. We believe this addition will prevent QCDRs from removing specifications following the initial required posting and increase transparency for participants. We also propose to make a technical update to the language removing the reference to providing the NQF number due to changes in the contractor that CMS uses for measure endorsement.

We invite comments on this proposal.

(5) Health IT Vendors

(a) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77377 through 77382), we established the category of health IT vendor in the Quality Payment Program, along with requirements for data submission. In the CY 2019 PFS final rule, we codified the definition of a health IT vendor as an entity that supports the health IT requirements on behalf of a MIPS eligible clinician (including obtaining data from a MIPS eligible clinician's CEHRT) (83 FR 59907). In the CY 2022 PFS final rule (86 FR 65541), we finalized a reorganization of the regulatory text governing the third party intermediary section to improve clarity and readability. In that revised text, we established general requirements at § 414.1400(a), additional requirements for QCDRs and qualified registries at § 414.1400(b), and additional requirements for health IT vendors at § 414.1400(c).

(b) Proposal to Remove Health IT Vendor Category

In the CY 2021 PFS final rule, we established additional program safeguards regarding data validation audit and targeted audit requirements that would apply specifically to QCDRs and qualified registries. We noted (85 FR 84928 and 84929) that while we did not propose these additional requirements for health IT vendors, we had become aware of situations in which health IT vendors have submitted data that are inaccurate and unusable and that could result in improper payments or otherwise undercut the integrity of the MIPS program. In our review of

comments in response to our solicitation on the future application of such requirements on health IT vendors, we observed that several commenters supported requirements for health IT vendors to perform data validation to align requirements with QCDRs and qualified registries and improve data integrity. We also observed that several commenters opposed additional data validation requirements for health IT vendors due to the associated cost, and that such a requirement would be duplicative of requirements of health IT vendors under the ONC regulatory framework.

Since the publication of the CY 2021 PFS final rule, we continue to have experiences with third party intermediaries submitting data that is inaccurate and unusable. We believe this necessitates a reconsideration of the lack of data validation requirements for health IT vendors in contrast to those requirements for QCDRs and qualified registries.

In the CY 2019 PFS final rule (83 FR 59747 through 59749), we established the definition of collection type, submitter type, and submission type. These definitions are intended to more precisely describe how data is collected and submitted for the Quality Payment Program. For the quality, Promoting Interoperability, and improvement activity performance categories, an approved third party intermediary may submit directly to the submissions application programming interface (API), or upload files via *qpp.cms.gov*. Historically, third party intermediaries are able to receive tokens by virtue of successful self-nomination as a QCDR or qualified registry or, for those technologies that use CEHRT, through a request to CMS.

In examining the different requirements for QCDRs and qualified registries and health IT vendors, we note that the primary difference is the requirement for self-nomination at § 414.1400(b)(2) and requirements primarily related to data validation audits at § 414.1400(b)(3). We considered whether we should add a self-nomination requirement for health IT vendors or require data validation audits for health IT vendors or both. However, we believe that adding a self-nomination requirement or data validation audit requirements would

essentially eliminate the difference between a health IT vendor and a qualified registry. We observe today that many vendors serve in capacities as qualified registries, QCDRs or health IT vendors with similar technology. Rather than establish identical or nearly identical requirements for different categories of vendors, we instead propose to eliminate the health IT vendor category beginning with the CY 2025 performance period and by revising § 414.1400(a)(1)(iii). Absent a self-nomination process for Health IT vendors, we do not believe we can establish a meaningful enforcement mechanism to ensure that the vendors are meeting the requirements as we have laid out.

Removing Health IT vendors from the definition of third party intermediary will not preclude the vendors from assisting MIPS eligible clinicians with reporting under the program. Instead, the vendors may still provide their technology for clinicians to directly report under MIPS. We believe that eliminating the category of Health IT vendor as a distinct type of third party intermediary will create a clearer distinction between those vendors that are submitting data to us for the purposes of MIPS and must meet the requirements of a qualified registry or QCDR and those vendors that work with clinicians through the sale and support of health IT that permits the clinician or group to submit the data.

We invite comments on this proposal.

(6) Remedial Action and Termination of Third Party Intermediaries

(a) Background

We refer readers to § 414.1400(e), the CY 2017 Quality Payment Program final rule (81 FR 77386 through 77389), the CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), the CY 2021 PFS final rule (85 FR 84947), the CY 2022 PFS final rule (86 FR 65542 and 65550) and the CY 2023 PFS final rule (87 FR 70106 through 70109) for previously finalized policies for remedial action and termination of third party intermediaries.

(b) Additional basis for remedial action

(i) Failure to Maintain Correct Contact Information

In the CY 2017 Quality Payment Program final rule, we established the process for self-nomination for QCDRs (81 FR 77364 through 77367) and qualified registries (81 FR 77383 through 77384). We also established the process for corrective action plans in the CY 2017 Quality Payment Program final rule (81 FR 77389). In our work with QCDRs and qualified registries, we experienced times when the QCDR or qualified registry did not respond to certain requests in a timely manner, thereby delaying program operations. In some cases, we had further correspondence with the QCDR or qualified registry and those organizations suggested that the contact information (generally an email address) submitted as part of the self-nomination was not correct, so the request was never received. While we understand that personnel can change over time in an organization, such a change does not relieve the QCDR or qualified registry of its obligations under these rules. Therefore, we propose an additional provision at § 414.1400(e)(2)(iv) to allow us to immediately or with advance notice terminate a third party intermediary that has not maintained current contact information for correspondence.

We invite comments on this proposal.

(ii) Consecutive Years on Remedial Action

In the CY 2017 Quality Payment Program final rule, we established a process for placing third party intermediaries on probation for not meeting requirements (81 FR 77387). Specifically, if a third party intermediary did not meet requirements for qualification, they could be placed on probation for the current performance period and/or the following performance period. We also established that after two years on probation, a third party intermediary would be disqualified for the subsequent performance year (81 FR 77387 through 77389). In the CY 2019 PFS final rule, policies relating to probation and disqualification were renamed and reorganized under remedial action and termination of third party intermediaries (83 FR 59908 through

59910). Additionally, we finalized reasons for terminating third party intermediaries including being placed on remedial action, not submitting a corrective action plan, and not promptly correcting data errors (83 FR 59908 through 59910). At that time, we did not propose any actions related to third party intermediaries on remedial action for multiple years, as had been established under our initial probation policy.

We continue to experience issues with third party intermediaries that require corrective action plans in multiple years. We believe that third party intermediaries that consistently require corrective action plans, whether for the same or unrelated issues, do not further the goals of the Quality Payment Program, which are to improve quality of care while limiting administrative burden. We believe allowing third party intermediaries that have consistently demonstrated failure to comply with CMS requirements such that they required corrective action plans undermine clinicians' and groups' efforts to improve quality and could result in increased administrative burden for those clinicians and groups. For this reason, we propose to add at § 414.1400(e)(2)(v) that CMS may terminate third party intermediaries that are on remedial action for 2 consecutive years. This proposal will minimize risk within the Quality Payment Program by terminating third party intermediaries that are consistently deemed as non-compliant.

We invite comments on this proposal.

(c) Revised Corrective Action Plan Requirements

As described in § 414.1400(e)(1)(i), among the remedial actions that CMS may take against a non-compliant third party intermediary is a corrective action plan (CAP). Under paragraphs (e)(1)(i)(A) through (D), unless different or additional information is specified by CMS, the CAP must address the following issues: (A) the issues that contributed to the non-compliance; (B) the impact to individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program; (C) the

corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future; and (D) a detailed timeline for achieving compliance with the applicable requirements. In the CY 2023 PFS final rule, we finalized a policy at § 414.1400(e)(1)(i)(E) to require third party intermediaries to provide a communication plan for communicating the impact to the parties identified within the corrective action plan (87 FR 70107).

Based on our experience with corrective action plans from third party intermediaries through the years, we have identified a gap in our ability to determine if certain elements of the corrective action plan have been completed in the time and manner specified within the action plan. Therefore, we propose to add at § 414.1400(e)(1)(i)(F) an additional requirement for a third party intermediary under a corrective action plan to communicate the final resolution to CMS once the resolution is complete, and to provide an update, if any, to the monitoring plan provided under § 414.1400(e)(1)(i)(C). We believe this additional step will ensure that third party intermediaries complete the required actions within the corrective action plan.

We invite comments on this proposal.

(d) Public Posting of Deficiencies

In the CY 2017 Quality Payment Program final rule (81 FR 77386 through 77388), we established a remedial action that, in the event that a QCDR or qualified registry had data inaccuracies that affected more than 3 percent but less than 5 percent of the total number of MIPS eligible clinicians, we would have this information identified on the CMS public posting. We modified this requirement in the CY 2019 PFS final rule (83 FR 59909) that the data error rate would be publicly disclosed until the data error rate falls below 3 percent.

We are proposing to modify this requirement. While we previously determined that a single, objective measure (that is, a 3 percent error rate) would support our goals of public notice, we believe that the precise metric is not a meaningful indicator. Specifically, some errors

may be minor in nature yet affect a large number of clinicians for whom the QCDR or qualified registry has reported data. Other errors, however, may be materially significant but may not affect 3 percent of the MIPS eligible clinicians due to the unique nature of the data point at issue.

We believe that there is significant value in informing the public and potential customers which QCDRs and qualified registries are under remedial action or are terminated. Therefore, we propose to add a new provision at § 414.1400(e)(1)(ii)(B) that CMS may, beginning with the CY 2025 performance period/2027 MIPS payment year, publicly disclose on the CMS website that CMS took remedial action against or terminated the third party intermediary. We note that this public disclosure would be limited to the presence of the corrective action plan and would not include any proprietary information from the QCDR or qualified registry. We also propose to modify § 414.1400(e)(1)(ii) by redesignating it as § 414.1400(e)(1)(ii)(A) and ending this policy after the CY 2025 performance period/2027 MIPS payment year. We are proposing to remove this policy because we believe it would be superseded by the proposal included in § 414.1400(e)(1)(ii)(B).

We invite comments on these proposals.

(e) Considering Past Performance in Approving Third Party Intermediaries

In the CY 2017 Quality Payment Program final rule, we established that third party intermediaries would be placed on probation status if they had not met criteria for qualification following self-nomination (81 FR 77386 through 77389). Under the terms of the probation policy, a corrective action plan could be required to address any deficiencies or prevent them from recurring. In addition, a third party intermediary that was on probation status for 2 years would be disqualified for the subsequent performance period. In the CY 2019 PFS final rule (83 FR 59909), we consolidated the corrective actions that we would take in the event of a deficiency or error on the part of a third party intermediary. This included the elimination of a policy of probation for third party intermediaries and the establishment of a policy of remedial

action for third party intermediaries. We did not change the factors made to determine a remedial action or probation.

We have continued to experience issues related to data errors from third party intermediaries and these errors often extend over multiple years. We are concerned that some third party intermediaries fail to address deficiencies with regularity, and are required to perform remedial actions as defined in corrective action plans over the course of many years. This suggests that these organizations are not able to properly adhere to the criteria for qualification for third party intermediaries. While we have established criteria for approval of third party intermediary at § 414.1400(a)(2)(ii)(A) which state that our determination to approve a third party intermediary may take into account whether the entity failed to comply with the requirements for a previous MIPS payment year, we wish to clarify that the consideration of past compliance can also include remedial actions. While we already have the ability to consider whether the entity failed to comply with certain requirements, we do not believe that the existing requirements are explicit enough for third party intermediaries to understand that a history of remedial actions, even if addressed such that the third party intermediary was not terminated could result in CMS not approving future approval.

We invite comment on this proposal.

(f) Terms of Audits

In the CY 2017 Quality Payment Program final rule (81 FR 77389 through 77390), we finalized that third party intermediaries submitting MIPS data must comply with auditing procedures as a condition to participate in MIPS. In this rule, we did not establish the reasons we have for auditing a particular third party intermediary. We note that we perform both random and targeted compliance audits based on a number of reasons and we wish to document those reasons for transparency to the public. Therefore, we propose at § 414.1400(f) that third party intermediaries may be randomly selected for compliance evaluation or may be selected at the

suggestion of CMS if there is an area of concern regarding the third party intermediary. For example, areas of concern could include but are not limited to: high data errors, support call absences, delinquent deliverables, remedial action status, clinician concerns regarding the third party intermediary, a continuing pattern of Quality Payment Program Service Center inquiries or support call questions, and/or CMS concerns regarding the third party intermediary. We also propose to redesignate the existing section § 414.1400(f) (which includes paragraphs (f)(1), (2), and (3)) as paragraph (a)(3)(v) with minor changes in the text for clarity. We note that this section refers to program requirements, which we believe is a more appropriate characterization of these requirements.

We invite comments on these proposals.

(7) Technical Changes

In the course of reviewing the regulation for third party intermediaries, we identified areas in which certain language was used that is not as consistent or clear as it could be. We propose to make the following changes to § 414.1400 to improve clarity as denoted below:

- At paragraph (a)(2), to clarify that an organization may only become a third party intermediary for the purposes of MIPS by meeting the approval criteria by replacing the term “third party intermediary” with “organization”.

- Redesignate paragraph (a)(3) to delineate third party intermediary approval criteria from requirements for third party intermediaries as they participate in the Quality Payment Program. We propose the following redesignations:

- § 414.1400(a)(3) redesignated as § 414.1400(a)(3)(i);
- § 414.1400(a)(2)(i)(C) redesignated as § 414.1400(a)(3)(ii);
- § 414.1400(a)(2)(i)(D) redesignated as § 414.1400(a)(3)(iii);
- § 414.1400(a)(2)(i)(F) redesignated as § 414.1400(a)(3)(iv); and
- § 414.1400 (a)(2)(iii) redesignated as § 414.1400(a)(3)(vi).

These reorganized sections also include minor changes to the text. Please note that we discuss new proposals related to these requirements in section IV.A.4.k.(3) of this proposed rule. There is also a conforming change to reference this section at § 414.1400(e)(1).

- At § 414.1400(e)(3) to remove the word “total” from the phrase “total clinicians” as this word was included in error.

- At § 414.1400(e)(4) to improve clarity and remove a paragraph.

We invite comments on these proposals.

I. Public Reporting on Compare Tool

Section 10331(a)(1) of the Affordable Care Act provides for the development of a Physician Compare Internet Website (“Physician Compare”) with information on physicians and other eligible professionals enrolled in Medicare who participate in the Physician Quality Reporting Initiative (PQRI). Section 1848(q)(9) of the Act, as added by section 101(c) of MACRA, aligned Physician Compare with the newly established Merit-Based Incentive Payment System (MIPS) by requiring the public reporting of MIPS performance information for MIPS eligible professionals through Physician Compare.

For previous discussions of public reporting of physician and clinician performance and information, we refer readers to the CY 2016 Physician Fee Schedule (PFS) final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2022 PFS final rule (86 FR 65550 through 65554), the CY 2023 PFS final rule (87 FR 70109 through 70113) and the Care Compare: Doctors and Clinicians Initiative web page at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>. We also note that as finalized at § 414.1305 “Physician Compare” is defined as the Physician Compare internet website of CMS (or a successor

website). As discussed in prior rulemaking, we note the current website is the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as the “Compare tool” throughout prior rulemaking and this proposed rule (86 FR 39466).

(<https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>.) We also note that as finalized at § 414.1305 “Physician Compare” is defined as the Physician Compare internet website of CMS (or a successor website). As discussed in prior rulemaking, we note the current website is the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as the “Compare tool” throughout prior rulemaking and this proposed rule (86 FR 39466).

(1) Telehealth Indicator

In the CY 2023 PFS final rule, we finalized the addition of an indicator to the profile pages of clinicians who furnish telehealth services (87 FR 70109 through 70111) to established processes and coding policies to identify such clinicians (*id.*). Among the originally proposed policies, we proposed using Place of Service (POS) code 02 (indicating telehealth) on paid physician and ancillary service (that is, carrier) claims or modifier 95 appended on paid claims (87 FR 46330). During the CY 2023 PFS proposed rule public comment period, we received unanimous support for adding a telehealth indicator. One of the commenters also brought to our attention a POS coding update, and we subsequently finalized a policy of using both POS 02 and POS 10, as well as modifier 95 to identify clinicians that furnish telehealth services.

At the time of the CY 2023 PFS proposed rule, we were not aware of an update in process for POS Code 02 revising the description from “telehealth” to “telehealth provided other than in patient’s home” for locations in which telehealth services were furnished. In connection with this change to POS Code 02, Medicare also adopted the then newly added POS Code 10, “telehealth provided in patient’s home.” Since many telehealth visits occur in patients’ homes it was appropriate and consistent with the intent of our proposal to include POS 10 in

addition to POS 02 and claims modifier 95 to identify clinicians providing telehealth services in our final policy.

The POS Code 10 comment, described earlier in this section, received in response to our proposal in the CY 2023 PFS proposed rule, inferred the need to stay current with all types of coding changes that occur throughout the year, outside of the annual PFS rulemaking cycle. Under our current policy, we would already be using the most current CPT codes for each telehealth indicator update; however, we would need to use annual rulemaking to update the POS and claims modifier codes used for telehealth indicator public reporting purposes. Depending on how frequently codes are updated, there could be the unintended consequence of using the annual rulemaking cycle to adopt updated codes that could otherwise be avoided through establishing a coding flexibility policy. If we are limited to the codes specifically finalized via rulemaking, the codes used to inform the telehealth indicator may be incomplete or outdated when we refresh the telehealth indicator on clinician profile pages throughout the year, resulting in users of the Compare tool receiving incorrect information.

Adding coding flexibility for other codes, such as POS and claims modifiers, would both help avoid future regulatory burden and allow for more real-time accuracy of the telehealth information provided on Care Compare. This is particularly important since consumer testing and 1-800-MEDICARE inquiries have shown that patients and caregivers are actively looking for telehealth services, as well as for health equity purposes since telehealth is critical to those who live in rural areas, lack transportation, or have other limitations.

For these reasons, we are proposing to update our policy for identifying clinicians furnishing telehealth services, such that we remain current with CMS coding changes, without proposing and finalizing such coding changes via rulemaking. Specifically, instead of only using POS code 02, 10, or modifier 95 to identify telehealth services furnished for the telehealth indicator, we would use the most recent codes at the time the data are refreshed that identify a

clinician as furnishing services via telehealth. This flexibility is consistent with how we use the most current CPT codes, some of which are time-limited, to identify clinicians furnishing telehealth services. We are proposing that at the time of such a data refresh we would publish the details of which codes are used for the telehealth indicator through education and outreach, such as via a fact sheet, listserv, and information posted on the Care Compare: Doctors and Clinicians Initiative page, available at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>. We are seeking comment on this proposal.

(2) Publicly Reporting Utilization Data on Profile Pages

Section 104(a) of MACRA provides that, beginning with 2015, the Secretary shall make publicly available on an annual basis, in an easily understandable format, information with respect to physicians and, as appropriate, other eligible professionals, on items and services furnished to Medicare beneficiaries. The information made available must be similar to the physician and other supplier utilization data we have historically made available through the Medicare Provider Utilization and Payment Data: Physician and Other Supplier Public Use File (“PUF”) and shall include information on the number of services furnished by the physician or other eligible professional under Medicare, which may include information on the most frequently furnished services or groupings of services. Section 104(e) of the MACRA requires that we integrate this data into the Compare tool. We finalized a policy to report the most recent available utilization data in downloadable format beginning in late 2017 (80 FR 71130). This information continues to be available today in the Medicare Provider Data Catalog (PDC) available at <https://data.cms.gov/provider-data/topics/doctors-clinicians>. Separately, we have reported on the Compare tool clinician training information as well as a clinician’s primary and secondary specialties.

In the CY 2023 PFS final rule, we established a policy for publicly reporting procedure information on clinician profile pages to provide patients more information in their clinician

searches in an understandable format, beginning no earlier than CY 2023 (87 FR 70111 through 70113). Until that time, we had gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the Physician and Other Supplier Data PUF. Although these data are useful to the healthcare industry, healthcare researchers, and other interested parties, this information was presented in a technical manner that was not easily accessible or usable by patients, who do not frequently visit <https://data.cms.gov> or understand medical procedure coding.

We also established that priority procedures selected for utilization data public reporting will meet one or more of the following criteria:

- Have evidence of a positive relationship between volume and quality in the published peer reviewed clinical research;
- Are affiliated with existing MIPS measures indicating importance to CMS;
- Represent care that a patient might shop for a clinician to provide; and/or
- Are an HHS priority.

We finalized that this data would be based on a 12-month lookback period, with data refreshes updated bi-monthly, as technically feasible, and we would not initially prioritize complex, rare procedures. We noted that the utilization data shown on profile pages would only reflect Medicare Fee-for-Service (FFS) claims data and would not include procedures performed for patients who have other types of insurance. To meaningfully categorize procedures, we finalized the policy of using the Restructured Berenson-Eggers Type of Service (BETOS) Codes Classification System to collapse Healthcare Common Procedure Coding System (HCPCS) data into procedural categories, and when no Restructured BETOS categories are available, procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures. Restructured BETOS is a taxonomy that allows for the grouping of procedure codes into clinically meaningful categories and subcategories. Additional Restructured BETOS

information is available at <https://data.cms.gov/provider-summary-by-type-of-service/provider-service-classifications/restructured-betos-classification-system>. These category sources, as finalized, allow us to publicly report procedural utilization data in a meaningful way to patients and caregivers rather than showing thousands of rows of individual HCPCS data, as we do for the research community in the PDC. For example, applying categories enables us to list that a clinician performs knee arthroplasties. Using plain language, we would simplify the procedure category name to “knee replacements” for understandability instead of listing each of nine unique procedure codes indicating the specifics of exactly which bones and which implants were involved.

Since the publication of the CY 2023 PFS final rule, we conducted additional consumer testing and data analysis to prepare and select certain procedure-related utilization data for publication. Consumer testing showed that publicly reporting utilization data on patient-facing clinician profile pages and using plain language, is helpful for patients and caregivers to make informed healthcare decisions, since it allows them to find clinicians who have performed specific types of procedures. Consumer testing results showed that patients and caregivers understand this language, would not select a health care provider based on this information alone, and find the information helpful but would like the procedure volume to also reflect patients with other insurance if possible. Our data analyses have confirmed the availability of Medicare Advantage (MA) data increasing the representativeness of the procedure (that is, utilization) data, as discussed later in this section.

We are targeting to release procedure data based on FFS claims on clinician profile pages later this year, beginning with 13 priority procedure categories identified for public reporting. Details on the utilization data publicly reported on clinician profile pages will be available on the Care Compare: Doctors and Clinicians Initiative page, available at

<https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative> and on the PDC at <https://data.cms.gov/provider-data/dataset/eedd-4c6c>.

(a) Updating the Provider Data Catalog (PDC) Utilization Data Policy

As discussed earlier in this section, we historically have published a PDC file that is a subset of the most commonly performed procedures in the PUF. With the upcoming release of the initial procedural utilization data, we will publish a second utilization file in the PDC that will reflect the procedure category information on clinician profile pages. That is, consistent with what will be publicly reported on profile pages, the second PDC file will aggregate like procedures and include an indication of low volume counts, in accordance with the CMS small cell size policy, in which counts below 11 cannot be publicly reported, to protect patient privacy.

It would be of greater use for the PDC to only have one utilization downloadable file that reflects the same subset of data, in the same format, as what will be publicly reported on clinician profile pages. Doing so aligns the criteria for selecting utilization data in the PDC to reflect the same criteria for selection on clinician profile pages and will assist researchers in analyses of utilization data on clinician profile pages. Moreover, the researcher and clinician communities, who are the primary users of the PDC, would appreciate having the single downloadable dataset that reflects the same procedure utilization data that would appear on clinician profile pages. It would also be more efficient to focus resources on maintaining one file reflective of clinician profile page utilization data rather than both produce that file and duplicate some of the PUF information on the PDC. The full CMS PUF of FFS data is still available on <https://data.cms.gov> for researchers and clinicians who are interested in the full set of Medicare procedure information at the individual procedure code level. To direct researchers to the PUF of Medicare FFS information, we currently communicate where to locate the original PUF and the details of the updated PDC file through education and outreach, such as via a fact sheet, listserv, and information posted on the Care Compare: Doctors and Clinicians Initiative page, available at

<https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>.

Therefore, we propose revising the policy to publicly report a subset of the Medicare PUF on the PDC to instead provide a single downloadable dataset including the procedure utilization data that would appear on clinician profile pages. If this proposal is finalized, we would remove the PUF subset file from the PDC and only keep the utilization data file that reflects the information on clinician profile pages in the PDC.

We seek comment on all aspects of this proposal, including any concerns about technical feasibility; our proposed approach to aligning the criteria for selecting utilization data in the PDC to reflect the same criteria for selection on clinician profile pages; ways in which we inform researchers on the location of the full CMS PUF for continued use; and any other considerations. The proposals discussed later in sections IV.A.4.1.(2)(b) and (2)(c) would also be reflected in the new downloadable utilization data file in the PDC if the other proposals are finalized as proposed.

(b) Procedure Grouping Policy for Publicly Reporting Utilization Data

As mentioned earlier in this section, in the CY 2023 PFS final rule, we finalized using Restructured BETOS and procedure code sources used in MIPS when no Restructured BETOS categories are available, such as the procedure categories already defined for MIPS measures to meaningfully categorize procedures for public reporting (87 FR 70111). However, since finalizing this policy, we identified some commonly sought procedures, such as hysterectomy, that do not have a procedure category specified in the Restructured BETOS categorization system or a relevant code set in any MIPS quality or cost measures. We anticipate this issue could occur for additional procedures as we continue to identify additional priority procedures for public reporting.

We received a few comments on the CY 2023 PFS proposed rule that stated that some of the Restructured BETOS categories may be too broad and acknowledged that there is no other existing standard, systematic way to group procedures by HCPCS codes (87 FR 70111 and 70112). However, we did not receive any suggestions for alternative sources for the purpose of grouping procedures during the CY 2023 PFS proposed rule public comment period.

We now propose to define meaningful categories using subject matter expert (for example clinician) input in instances where a procedure category is unavailable under the Restructured BETOS or MIPS measures, if a code category exists but is not suitable for public reporting, or in instances where a procedure category does not exist, to create new, clinically meaningful, and well-understood procedure categories as needed. Added flexibility in grouping HCPCS codes to create procedure categories meaningful to patients and caregivers would allow users of the Compare tool to better assess a clinician's volume and scope of experience with a particular procedure and inform healthcare decision making.

To implement this, we are proposing to modify the existing policy such that, in addition to the two previously finalized sources (Restructured BETOS categorization system and code sources used in MIPS), we may use alternate sources to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists. If we develop new procedure categories for publicly reporting utilization data on clinician profile pages, we propose to engage subject matter experts and interested parties through periodic requests for feedback using methods outside of rulemaking, such as listserv emails, listening sessions, and focus groups to solicit feedback on bespoke procedure categories planned for future releases of utilization data, as appropriate and technically feasible.

We are seeking comment on all aspects of our proposal to modify existing procedural categorization policy to use alternate sources to create clinically meaningful and appropriate

procedural categories and our proposed approach to engaging with subject matter experts in developing procedure categories, as appropriate and technically feasible.

(c) Incorporating Medicare Advantage (MA) data into Public Reporting

Between the time of the CY 2023 PFS proposed and final rules, our Medicare FFS claims data analyses showed that for the initial 13 priority procedures identified, approximately 50 percent of clinician-procedure combinations fall into the low volume category, which meant that, based on Medicare physician and ancillary service (carrier) claims in the past 12 months, we could only publish an indicator that a clinician has experience with the procedure rather than specific counts. Under the small cell size policy, we prohibit the use of specific procedure or patient counts in cases where the count is below ten. The high number of clinicians with a low volume indicator is partly due to not including data for patients with other coverage, such as MA plans or other payers, for whom a given clinician has also performed such procedures. As such, we are currently limited in our ability to contextualize low volume clinician experience with procedures in a way that is useful and easily understandable for patients and caregivers who may be looking for a clinician with experience performing a specific procedure.

As we identify more priority procedures for public reporting, more procedures may be subject to the small cell size policy using Medicare FFS data alone, which would prevent us from publicly reporting health care provider experience with such procedures for patients and caregivers to use in their healthcare decisions. Based on public comments and consumer testing, including other payer data would help prevent this issue. Specifically, we received several comments on the CY 2023 PFS proposed rule from the clinician community who had expressed concern about the understandability of the data and that limiting procedure data counts to Medicare FFS claims only does not reflect the full scope of clinician practice (87 FR 70112). Consumer testing findings have also shown that patients and caregivers would like procedure information to reflect all procedures performed, since it better represents clinicians' experience.

While we agreed with comments received on the CY 2023 PFS proposed rule, we were unable to finalize the possibility of using other payer data as appropriate and technically feasible at that time. However, we have subsequently determined through analysis of MA encounter data submitted to CMS that it would be technically feasible to integrate MA encounter data into procedure category counts and that adding such data adds to the representation of some clinicians' scope of care. For example, adding MA encounter data to the initial set of publicly reported procedure categories would reduce the low volume clinician-procedure counts by approximately 12 percent. An additional 10,689 unique clinicians would have information on their profile pages, since they do not have this information based on FFS data alone. These unique clinicians account for furnishing 9 percent (10,869/114,243) of the combined FFS and MA patient populations from July 1, 2021 to June 30, 2022.

Therefore, we are proposing to publicly report aggregated counts of procedures performed by providers based on MA encounter data in addition to Medicare FFS utilization data, given that we have determined it is appropriate and technically feasible. Section 104(a) and (b) of MACRA provides for the public reporting of items and services furnished to Medicare beneficiaries under title XVIII of the Act, including, at a minimum, information on the most frequent services or groupings of services furnished by physicians or other eligible professionals under part B of title XVIII of the Act. This provision authorizes the publication of information on the items and services furnished to "Medicare beneficiaries under Medicare by physicians and certain other professionals." Notably, the statute authorizes the disclosure of information on all items and services furnished to Medicare beneficiaries under the Medicare Act; that is, the statute does not limit the disclosure to a particular subset of Medicare services. Indeed, section 104(c)(1) of MACRA provides that the information made available must include "at a minimum" certain information on Part B services. This does not limit the disclosure authorized by section 104(a) of MACRA to information on Part B items and services; instead, it specifies

the minimum information that CMS must disclose, leaving additional disclosures under section 104(a) of MACRA to CMS' discretion. MA plans cover Part A and Part B benefits (excluding hospice services, acquisition costs for kidneys used for transplants, and, for a limited period, certain services under new National Coverage Determinations and changes in legislation) for Medicare beneficiaries that elect to enroll in an MA plan; this coverage is also under Title XVIII of the Act. Section 104(a) of MACRA thus authorizes the disclosure of certain information about items and services provided as benefits under an MA plan and furnished by a physician or other eligible professional.

Separately, section 10331(b)(4) of the Affordable Care Act provides for the Secretary to, in developing and implementing his plan to make information as determined appropriate by the Secretary available on Physician Compare, include data that reflects the care provided to all patients seen by physicians, under both the Medicare program and, to the extent practicable, other payers, to the extent such information would provide a more accurate portrayal of physician performance. Thus, the inclusion of MA encounter data is consistent with the relevant statutory provisions regarding the disclosures on the Care Compare website.

Per section 1853(a)(3)(B) of the Act, CMS has required MA organizations to submit the data necessary to characterize the context and purposes of each item and service provided to a Medicare beneficiary enrolled in an MA plan to use for risk adjusting payments by CMS to MA plans. Per the MA regulation at § 422.310(f)(1)(vii), CMS may use this risk adjustment data, which includes MA encounter data, for activities to support administration of the Medicare program and for purposes authorized by other applicable law. The MA regulation at § 422.310(f)(2) allows CMS to release encounter data for any of the purposes specified in § 422.310(f)(1) in accordance with applicable Federal laws and CMS data sharing procedures, subject to protections of beneficiary confidentiality and commercially sensitive data. Finally, § 422.310(f)(3) imposes restrictions on when the data is available for release. We propose to rely

on § 422.310(f), as well as section 104 of the MACRA and section 10331 of the Affordable Care Act, for using and releasing the MA encounter data as part of the Care Compare website. To accomplish this, we are also proposing to amend § 422.310(f)(3) to permit the release of the MA encounter data on the timeframe(s) used for disclosure and release of the data on the Care Compare website. This proposal would ensure that there is no confusion about our ability to use and release the MA encounter data for the Care Compare website and downloadable files and permit release of MA when necessary and appropriate to support activities or authorized uses under paragraph (f)(1)(vii) of this section.

Using and analyzing MA encounter data as part of the aggregated information disclosed through the Care Compare website will more completely fulfill the public reporting required by section 104 of the MACRA and section 10331 of the ACA and using the MA encounter data in implementing these statutory provision supports administration of the Medicare program. In addition, it is also consistent with administering the Medicare program overall to provide appropriate and helpful information to beneficiaries in selecting a provider. Thus, the use and disclosure of the MA encounter data here are within the scope of § 422.310(f)(1)(vii).

The aggregated utilization data we propose to include in the Compare tool meets the additional requirements to protect beneficiary and commercially sensitive information at § 422.310(f)(2) because only identifying information about healthcare providers and types of procedures performed within a specific time period would be disclosed on the website and available for release in the PDC downloadable files. The disclosure and release of these portions of the MA encounter data are consistent with CMS data sharing procedures, which are applied to the Medicare FFS data already displayed and available for download on the Care Compare website. However, when releasing the MA encounter data under § 422.310(f)(2), the timing limitations at § 422.310(f)(3) prohibit releasing encounter data before the applicable payment year's reconciliation has been completed except for in specified circumstances. Neither of the

exceptions applies here. Because we propose to use information from the MA encounter data, in combination with FFS claims data, over a 12-month rolling period, but risk adjustment reconciliation occurs no sooner than 13 months after the end of the year that services were provided, the timing of the proposed release of the MA encounter data is not within the scope of the timing requirements in § 422.310(f)(3).

MA organizations submit encounter data continuously, but do not have the same timeliness requirements for submission that FFS providers have for submitting claims. In the August 22, 2014 final rule entitled, “Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Fiscal Year 2015 Rates; Quality Reporting Requirements for Specific Providers; Reasonable Compensation Equivalents for Physician Services in Excluded Hospitals and Certain Teaching Hospitals; Provider Administrative Appeals and Judicial Review; Enforcement Provisions for Organ Transplant Centers; and Electronic Health Record (EHR) Incentive Program” (79 FR 49854), CMS adopted § 422.310(f)(3) to address concerns that the need to update or correct MA encounter data prior to the final submission deadline could mean that the MA encounter data was not sufficiently complete or fully reliable for public release. However, since that time, which was during the first few years of submission of MA encounter data to CMS, submissions of MA encounter data have improved. In particular, the provider identifying information and procedure codes required for the Compare tool are well reported. Because the Compare tool is reporting aggregated counts of procedures, and not at the beneficiary level, releasing this data before final reconciliation is appropriate to support the administration of the Medicare program. Furthermore, including utilization and limited provider-identifying data from MA encounters prior to the data being reconciled by the MA organization would substantially improve the Compare tool and, thereby, the administration of the Medicare program overall by providing patients and caregivers with more useful and easily understandable information about

procedures performed by providers in their search for a clinician. We therefore propose to amend § 422.310(f)(3) to include an additional exception at (f)(3)(iv) that permits CMS to release aggregated risk adjustment data before the reconciliation for the applicable payment year has been completed if CMS determines that releasing aggregated data is necessary and appropriate for the purposes specified in § 422.310(f)(1)(vii).

Based on our analyses, the inclusion of data about utilization in the MA program would reduce the low volume procedure counts subject to the small cell size policy, in which precise counts less than ten procedures or patients cannot be publicly reported. This would allow us to more accurately report the types of services that Medicare clinicians provide. Based on the public comments in our prior rulemakings about the Care Compare website and consumer feedback, aggregating utilization data from the Medicare FFS and MA program would also enhance patient use of the information. Although the initial release of publicly reported utilization data on the Compare tool is limited to clinicians' Medicare FFS claims, publicly reporting utilization data that includes Medicare FFS and MA would also be more consistent with MIPS quality information submitted via health IT vendors or registries that include other payer data. Lastly, adding MA data to the counts in the existing Medicare FFS utilization data file will mitigate interested party concerns by ensuring the data is more reflective of the physician's/clinician's scope of practice.

We seek comment on all aspects this proposal.

(3) Request for Information: Publicly Reporting Cost Measures

Section 1848(q)(9)(A)(i) of the Act requires us to publicly report MIPS eligible clinicians' final scores and performance category scores and authorizes, but does not require, us to publicly report MIPS eligible clinicians' performance with respect to each measure or activity. In the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), we finalized our policies for publicly reporting MIPS eligible clinicians' and groups' final scores,

performance category scores, and measure-level scores in an easily understandable format. Currently, we publicly report certain MIPS performance information that meet public reporting standards on clinician, group, and Accountable Care Organization (ACO) profile pages of the Compare tool (available at <https://www.medicare.gov/care-compare/>) so Medicare patients and caregivers can use it when making healthcare decisions. In addition to publicly reporting final scores and performance category scores in the PDC, we established a policy to publicly report performance on measures, activities, and attestations, from the MIPS quality, cost, Promoting Interoperability (previously called Advancing Care Information), and improvement activities performance categories that meet established public reporting standards (81 FR 77395). We codified these public reporting standards in our regulations at § 414.1395(b), requiring that performance data be statistically valid, reliable, accurate, and comparable across collection types, to be included in the PDC, available at <https://data.cms.gov/provider-data/topics/doctors-clinicians>. The data must also resonate with patients and caregivers as determined by user testing to be included on the Compare tool profile pages.

As of the time of this proposed rule, data from the CY 2021 performance period/2023 MIPS payment year regarding MIPS eligible clinicians' performance in the quality, improvement activities, and Promoting Interoperability performance categories that meet public reporting standards are publicly available on Compare tool profile pages and in the PDC. However, we have not publicly reported any cost measure information from the cost performance category since the inception of MIPS for two primary reasons.

First, in the CY 2019 PFS final rule (83 FR 59910 through 59912), we established a policy to delay publicly reporting any new quality and cost measures for the first two years they are in MIPS to allow MIPS eligible clinicians and groups to gain experience with the new measures. We codified this policy in our regulation at § 414.1395(c). After this period, we would reevaluate the measures to determine when and if they are suitable for public reporting (83 FR

59910 through 59912). Second, we have not had cost measures available for public reporting because of the COVID-19 Public Health Emergency (PHE), during which we reweighted the cost performance category to zero percent for MIPS eligible clinicians' final scores in the CY 2019 performance period/2021 MIPS payment year, as discussed at <https://qpp.cms.gov/resources/covid19?py=2019>, the CY 2020 performance period/2022 MIPS payment year, as discussed at <https://qpp.cms.gov/resources/covid19?py=2020>, and the CY 2021 performance period/2023 MIPS payment year, as discussed at <https://qpp.cms.gov/resources/covid19?py=2021>. That is, for several years, we provided cost measure scores to clinicians for informational purposes only and did not publicly report MIPS eligible clinicians' performance in the cost measure category.

However, given the number of cost measures we have adopted in MIPS for at least two years and the PHE ending, we are evaluating ways to publicly report performance on cost measures on clinician and group profile pages beginning with data from the 2024 performance period/2026 MIPS payment year being publicly reported in 2026. Public reporting of these data would assist patients and caregivers in making healthcare decisions. In section IV.A.4.f.(2) of this proposed rule, we are proposing, beginning with the CY 2024 performance period/2026 MIPS payment year, adoption of five new episode-based cost measures and removal of one episode-based cost measure. If our proposal is finalized, there would be a total of 25 cost measures – 23 Episode-Based Cost Measures (EBCMs), Medicare Spending Per Beneficiary (MSPB), and Total Per Capita Cost (TPCC) – available for public reporting in CY 2026, provided they meet public reporting standards as set forth in our regulation at § 414.1395. In the CY 2019 PFS final rule (83 FR 59910 through 59912), we finalized a policy to delay publicly reporting any new quality and cost measures for the first 2 years they are in MIPS at § 414.1395(c). There are currently 25 cost measures available for public reporting at the time of this Request for Information, and the 5 cost measures proposed for inclusion in section

IV.A.4.f.(2) of this rule would not be eligible for public reporting until the CY 2026 performance period/2028 MIPS payment year. Additionally, by publicly reporting cost measures, we would further our goals of transparency, encouraging MIPS eligible clinicians to prioritize cost efficiency, and enabling patients and caregivers to make informed decisions about clinicians who consider costs as part of their care.

Research suggests that patients and caregivers are interested in comparative cost information.³²⁰ An Agency for Healthcare Research and Quality (AHRQ) environmental scan and systematic review of all payer claims databases (APCDs) in 2017 found there is a need for standardized and transparent cost measures reporting, as well as user-friendly interfaces that help patients and caregivers make informed healthcare decisions.³²¹ Several sources highlight the importance of presenting cost information in the context of quality metrics to improve healthcare consumers' ability to interpret cost data.^{322,323} Although there is limited research in this area, there is evidence that consumers can make high-value choices using cost in combination with other performance data.³²⁴

During a recent consumer testing session with patients, the majority of whom were Medicare beneficiaries and included two retired clinicians, several participants noted that they find cost information valuable and would use it in conjunction with other information when making healthcare decisions. This early finding suggests that this type of information is valued

by healthcare consumers; additional consumer testing with patients and caregivers and input from clinical subject matter experts would be beneficial for gathering feedback from the population who use the website and ensure that publicly reported MIPS cost measures are interpreted correctly and useful to website users. Further consumer testing with patients and caregivers would also help determine which aspects of cost performance information resonate most with them, as well as how to best display and plain language cost measure information on clinician and group profile pages.

We intend to propose in future rulemaking to publicly report MIPS cost measures beginning with data from the CY 2024 performance period/2026 MIPS payment year in CY 2026 on Compare tool clinician and group profile pages and in the PDC in 2026. In this Request for Information (RFI), we are seeking comment on a number of aspects of how to best establish publicly reporting cost measures, as discussed below.

- Potential approaches to reporting MIPS cost measures, including whether it is more meaningful to only report aggregated episodes or include component-level cost information for the EBCMs. Cost measure components are specified in the measure construction for each episode type based on input from clinical expert engagement activities during the development process and can include services related to either clinical treatments or adverse events (for example, clinically related diagnostic care, the need to receive post-acute care following the initial procedure or hospitalization, and the need to visit an emergency room or be readmitted for additional inpatient care following the initial procedure or hospitalization). With this context, patients would have additional information enabling them to make informed healthcare decisions.

To provide actionable cost measure data, we will test the consumer perceptions of the components of cost measures in addition to the overall cost measure scores to determine whether they resonate with users. We expect that component costs will provide context for patients and

caregivers to understand the extent to which costs are driven by what may be perceived as high-quality care (for example, post-discharge follow-up visits) or low-quality care (for example, procedure re-do). For example, when comparing clinicians, consumers could assess frequency or severity (for example, as measured by above average costs associated with clinically related complications).

- Benchmarking and possible comparators as well as how to best present this information to provide frames of reference for the cost performance information. Cost measures present a unique challenge to public reporting as their interpretation is not intuitive to consumers. While higher than expected costs may be driven by adverse outcomes, overall cost is comprised of care components that consumers could perceive as higher quality (for example, follow-up visits) as well as lower quality (for example, clinically related emergency department visits and re-hospitalizations). As a result, overall costs alone do not provide sufficient context about the drivers of those costs and may cause consumers more confusion in making a choice about where to seek care. Publishing overall costs could also be misleading, as previous consumer testing showed that some patients and caregivers interpret higher costs as a reflection of higher quality, when in fact testing during cost measure development has consistently demonstrated that clinicians with higher shares of costly adverse events, such as hospital readmission, tend to have worse scores.

One mechanism of contextualizing cost measure performance is through displaying cost measures alongside clinically relevant quality measures, resulting in a reflection of value.

However, there are two main reasons the current structure of MIPS does not consistently support this preferred display. First, under the self-selection policy for quality measures, MIPS eligible clinicians may select measures on which they expect to score best, rather than those that are most clinically relevant to their practice. This can result in a clinician profile with quality measures that are clinically unrelated to the clinician's core practice activities and, therefore, the

clinician's cost measures. Second, MIPS eligible clinicians have a choice between reporting their performance on quality measures as individuals or as part of a group. Group-reported quality measure performance cannot be disaggregated to the clinician level. Because we calculate cost measures independently for all eligible clinicians and groups using Medicare claims, performance information is available at both levels. When reporting cost measure performance at the clinician level (because patients and caregivers using the Compare tool prefer measure performance at the most granular level available), we could have cost measures on a MIPS eligible clinician's profile page with no accompanying quality measures. Given these realities inherent to MIPS, there may not always be relevant quality measure information available to display alongside cost for a value concept. MIPS Value Pathways (MVPs) may mitigate some of these issues, since clinicians would have a smaller set of quality measures, some of which could be more related to their specialty, for selection, but clinician versus group level performance reporting discrepancies would persist.

Therefore, we have considered several approaches to presenting cost measure performance information without assuming related quality measures would be available for adjacent display, including reporting the ratio of cost to the national average cost and the dollar cost per episode. These approaches may result in challenges to interpreting meaningful differences in costs. The Achievable Benchmark of Care (ABC™) methodology we currently use to star rate performance on publicly reported MIPS quality and Promoting Interoperability measures would not be appropriate for cost measures, because this method is used for measures in which a single direction of performance (for example, higher) is universally desirable, which, as discussed previously, is not always the case with cost performance. We have also considered an approach to display the MIPS eligible clinician's or group's relative position in the distribution of the cost measure performance compared to the national average we calculate from MIPS cost measures using three levels. Doing so, we could determine whether each clinician or

group performance on each scored cost measure is “greater than,” “less than,” or “no different” compared to the national average cost.

We are inviting comment on this possible approach to publicly reporting individual MIPS eligible clinician’s or group’s performance on individual EBCMs, MSPB, and TPCC compared to the average performance of all MIPS eligible clinicians nationally. We are also seeking comment on considerations for these comparators or benchmarks discussed above, particularly whether they would be useful to present or if there are any alternatives we have not yet considered.

To summarize the aspects discussed above in which we request additional information, we are seeking comment on the following topics related to public reporting of MIPS cost measures on the Compare tool:

- How can we present MIPS cost measures information in a way that reflects meaningful outcomes to patients and their caregivers and the value of care, rather than cost alone?
- What are the considerations for publicly reporting the total episodic cost, component-level costs, or both? Do the component costs provide adequate context for patients and their caregivers to make informed healthcare decision? What other specific information about MIPS cost measures, including the context of quality measures and MVPs, should we consider including on the Compare tool?
- What are the considerations for publicly reporting the national average cost, ratio of cost to the national average cost, and/or the dollar cost per episode as possible benchmarks for comparison discussed above in this section? What other benchmarks or comparator approaches should we consider?
- Are there any considerations for evaluating cost measures for public reporting beginning with cost measure data from CY 2024 performance period/2026 MIPS payment year in the CY 2026?

- What other factors, such as those related to health equity, should be taken into consideration?

- We request comment on additional information that we may not have considered or discussed above about publicly reporting MIPS cost measures, as well as any unintended impacts and/or positive outcomes that could result from making this information publicly available on the Compare tool.

n. Overview of QP Determinations and the APM Incentive

(1) Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables us to advance accountability and encourage improvements in care. The Secretary has also adopted the closely related goal of having all people with Traditional Medicare in an accountable care relationship with their health care provider by 2030, where their needs are holistically assessed and their care is coordinated within a broader total cost of care system. Our vision for increased participation among clinicians in Advanced APMs is driven by a belief that integrating individuals' clinical needs across a spectrum of providers and settings will improve patient care and population health.

As we continue to improve the Quality Payment Program, we seek to develop, propose, and implement policies that encourage broad clinician participation in Advanced APMs. For example, in this section, we are proposing to calculate QP determinations at the individual level for each unique NPI associated with an eligible clinician participating in an Advanced APM. As discussed further in the proposal, we believe that this change will provide a more accurate measure of the actual engagement of individual clinicians participating in Advanced APMs. This accuracy is important for administration of the Quality Payment Program incentives and also

could help us better identify and understand the motivating factors and indicators of clinician readiness for greater adoption of Advanced APMs.

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the “snapshot dates” (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians in an APM Entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List for more than one APM Entity, but do not to achieve QP status based on any APM Entity-level determinations, we make QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM, we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

(2) Individual QP Determination

Under the current policy at § 414.1425(b), most eligible clinicians participating in Advanced APMs receive their QP determinations at the APM Entity level. In the CY 2017

Quality Payment Program proposed rule (81 FR 28319), we contemplated that “as with any group assessment, there will be some situations in which individual Threshold Scores would differ from group Threshold Scores if assessed separately. This could lead to some eligible clinicians becoming QPs when they would not have met the QP Threshold individually (a ‘free-rider’ scenario) or, conversely, some eligible clinicians not becoming QPs within an Advanced APM Entity when they might have qualified individually (a dilution scenario).” At that time, we believed that the benefits of performing QP determinations for the APM Entity as a group outweighed these potential scenarios. However, as we previously indicated in a Request for Information in the CY 2023 PFS proposed rule (87 FR 46337 through 46339), we have come to believe that the effects of these types of scenarios, including effects that we had not intended or foreseen in the 2017 rule, have come to outweigh the benefits of performing QP determinations at the APM Entity level.

First, it has been brought to our attention that our policy to conduct most QP determinations at the APM Entity level may have inadvertently discouraged some APM Entities from including certain types of eligible clinicians, particularly in multi-specialty APM entities such as ACOs, leading those clinicians to be excluded from participation in Advanced APMs. Because the APM Entity Threshold Scores (using the payment amount and patient count methods) that are used to make APM Entity-level QP determinations are based on an aggregate calculation across all eligible clinicians participating in the APM Entity group, eligible clinicians in the APM Entity group who furnish proportionally fewer services that lead to attribution of patients or payment amounts to the APM Entity are likely to lower the APM Entity’s Threshold Score. Many Advanced APMs attribute patients to APM Entity groups based in part on the provision of primary care services, but not all eligible clinicians typically furnish primary care services. For example, primary care physicians may furnish proportionally more evaluation and management (E/M) (office visit) services, which, as we explain more in the next section, are

frequently the basis for attribution of patients and payment amounts to the numerator of the APM Entity's Threshold Score, whereas specialist physicians may furnish proportionally more diagnostic tests and surgical procedures, which are not usually part of the attribution basis to the APM Entity.

We have received reports from Advanced APM participants and specialty societies that some APM Entities have taken steps to exclude from their APM Entity groups (and consequently from their Participation Lists) eligible clinicians who furnish proportionally fewer services that lead to the attribution of patients or payment amounts for purposes of calculating Threshold Scores for APM Entity-level QP determinations. For reasons stated above, this action typically would lead to the exclusion of certain specialists from the APM Entity. There are important reasons that it is not beneficial for an APM Entity to exclude specialists and other eligible clinicians who furnish relatively fewer services that lead to attribution. In both the Medicare Shared Savings Program and in models tested by the Innovation Center that meet the criteria to be Advanced APMs, CMS seeks to promote patient-centered care that is integrated across the continuum of care. The inclusion of specialists in APM Entities is essential for achieving this goal. For example, a comprehensive network that includes a range of specialists is central to the success of an ACO in the Medicare Shared Savings Program for its intended purpose in patient-centered care that coordinates items and services for Medicare FFS beneficiaries, a key aim of value-based care and practice transformation.³²⁵ The methodology used in beneficiary assignment for the Shared Savings Program is deliberately constructed such that assignment is largely based on primary care, rather than specialty care, which results in specialists contributing proportionately less in terms of payment amounts and patient counts to the numerator of the ACO's Threshold Score calculation used for APM Entity-level QP determinations. Similarly, it was not our intent to create a policy whereby eligible clinicians who are seeing most or all of

³²⁵ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/about>.

their Medicare patients through an Advanced APM may remain unable to achieve QP status because the APM Entity with which they participate in the Advanced APM includes eligible clinicians who furnish very few services through the Advanced APM. It has always been one of the goals of the APM track of the Quality Payment Program for the availability of QP status to incentivize eligible clinicians to join Advanced APMs. But under our current policy to make most QP determinations at the APM Entity level, there is the potential that eligible clinicians who are fully engaged in an Advanced APM may still be unable to earn QP status. We carefully considered our policy to make most QP determinations at the APM Entity level, and believed it was the best approach at the time. However, we did not intend for the policy to create potentially conflicting incentives for APM Entities between the goal for their eligible clinicians to achieve QP status under the Quality Payment Program, and their full participation in an Advanced APM with a group of eligible clinicians that can deliver a full spectrum of care.

In the CY 2017 Quality Payment Program proposed rule (81 FR 28319), we stated that “the statute consistently refers to an eligible clinician throughout section 1833(z) of the Act and clearly identifies that the QP determinations are to be made for an eligible clinician,” then noted that “in section 1833(z)(3)(B) of the Act, the definition of an eligible clinician includes a group of such professionals.” While the statutory scheme provides for the flexibility to establish policies that apply for groups of eligible clinicians, it does not require that approach. When we proposed the policy to calculate Threshold Scores at the APM Entity level, we based this policy in part on “a premise that positive change occurs when entire organizations commit to participating in an Advanced APM and focusing on its cost and quality goals as a whole.” While we continue to believe in this premise, we also recognize that, if APM Entities are removing or otherwise not including eligible clinicians who may technically contribute less to the APM Entity-level Threshold Score, such actions may impede other worthy goals of the Advanced

APM (such as increased care coordination directly among providers caring for a patient), in which case that larger positive change we were seeking to foster is not being achieved.

Conversely, we are concerned that, under our current policy to make most QP determinations at the APM Entity level, in situations where an APM Entity does attain QP status, some eligible clinicians who furnish relatively fewer of their services through that APM Entity may receive a disproportionate financial benefit because their QP status was achieved as a result of the care furnished by other eligible clinicians in the APM Entity while their APM Incentive Payment is calculated based on all of the covered professional services that the individual eligible clinician furnishes during the base year, including services that were not furnished through an Advanced APM. Our policy to make most QP determinations at the APM Entity level allows these windfall financial rewards because we calculate the Threshold Scores using the aggregate of payment amounts or patient counts for attributed patients based on Medicare Part B covered professional services furnished by all the eligible clinicians in the APM Entity, whether an individual eligible clinician furnished a few or many such services. Once an eligible clinician receives QP status for a year, the APM Incentive Payment is calculated based on paid claims for the individual QP's covered professional services across all their TINs in the base year. This can allow an eligible clinician with minimal Advanced APM participation to receive a disproportionately large APM Incentive Payment, which we do not believe aligns with the intent of the Quality Payment Program.

As a result, we have reconsidered our current policy to make most QP determinations at the APM Entity level. Instead, we propose to amend § 414.1425(b) so that, beginning with the QP Performance Period for CY 2024, we would make all QP determinations at the individual level. We note that under §§ 414.1425(b)(2) and 414.1425(c)(4) we currently calculate Threshold Scores at the individual level when the Advanced APM includes eligible clinicians only on an Affiliated Practitioner List, and further, under § 414.1425(c)(4) we also calculate QP

determinations individually when the eligible clinician participates in multiple Advanced APMs and does not achieve QP status at the APM Entity level. The proposal would not change our policy for these determinations, but would change the way we make QP determinations for all other eligible clinicians. Under the proposal, we would calculate Threshold Scores for QP determinations at the individual level for each unique NPI associated with an eligible clinician participating in an Advanced APM. We would calculate a Threshold Score for each NPI based on all covered professional services furnished across all Tax Identification Numbers (TINs) to which the eligible clinician has reassigned their billing rights. This individual Threshold Score would provide a more specific measurement of each eligible clinician's participation in an Advanced APM. This proposed methodology would ensure that those eligible clinicians who individually meet a QP threshold would receive QP status and its commensurate financial and other benefits. At the same time, it would remove the incentive for APM Entities to exclude certain types of eligible clinicians from their Participation Lists, because the success or failure of the APM Entity's eligible clinicians to reach QP status no longer would be collective. Because each eligible clinician on the APM Entity's Participation List would be evaluated individually at the NPI level, eligible clinicians with lower proportions of payments and payments through the Advanced APM Entity would not affect the QP status of other eligible clinicians on the APM Entity's Participation List.

(3) Payment Amount and Patient Count Methods

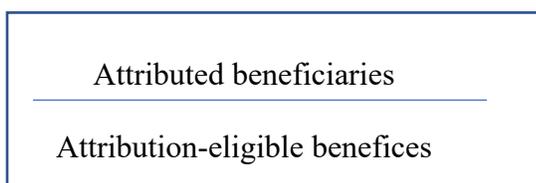

In the CY 2017 Quality Payment Program final rule (81 FR 77450 through 77457) we finalized the payment amount method and patient count method for calculation of Threshold Scores used for QP determinations under the Medicare option, and codified these methods at § 414.1435(a) and (b), respectively. The payment amount method is based on payments for Medicare Part B covered professional services, including certain supplemental service payments,

while the patient count method is based on numbers of patients. Both methods use the ratio of “Attributed beneficiaries” to “Attribution-eligible beneficiaries, as defined at § 415.1305.”³²⁶

Attributed beneficiaries are those who are attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of Attributed beneficiaries at the time of a QP determination. Attribution-eligible beneficiaries generally are those who, during the QP Performance Period, meet six criteria specified in the definition of that term at § 414.1305 and described in section IV.A.4.m.(3) of this proposed rule.

When making QP determinations at the APM Entity or individual eligible clinician level, we begin by calculating Threshold Scores using the payment amount and patient count methods. These Threshold Scores are percentages based on the ratio of the payment amounts or patient counts for Attributed beneficiaries to the payment amounts or patient counts for Attribution-eligible beneficiaries during the QP performance period. If the Threshold Score (using either the payment amount or patient count method) for the eligible clinician or APM Entity, as applicable, meets or exceeds the relevant QP threshold described at § 414.1430(a), the relevant eligible clinicians (either the individual eligible clinician or all those on the APM Entity’s Participation List) attain QP status for such year.

FIGURE 3: QP Determination Calculation

³²⁶ For technical information on the QP calculation methodology, see the “QP Methodology Fact Sheet” that we publish annually, which can be found as part of the “2023 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1509/2023%20Learning%20Resources%20for%20QP%20Status%20and%20APM%20Incentive%20Payment.zip>.

The regulation at § 414.1435(b)(3) provides that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4), that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups. In the CY 2021 PFS final rule (85 FR 84951 through 84952), we amended § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the Attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list. This means that beneficiaries who have been attributed to one APM Entity and are thus barred under the terms of an Advanced APM from attribution to another APM Entity are removed from the denominator of the payment amount method and patient count method in QP Threshold Score calculations for the APM Entity to which they cannot be attributed (in other words, we do not penalize an APM Entity in the QP Threshold Score calculation by including a beneficiary in its denominator when the terms of an Advanced APM do not permit such beneficiary to be attributed to such APM Entity).

(a) Attributed beneficiary:

An Attributed beneficiary is a beneficiary attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. There may be beneficiaries on the most recent available list who do not meet the criteria to be Attribution-eligible beneficiaries because the QP performance period does not coincide with the Advanced APM's performance period or attribution period, or for other reasons. There may be cases where a beneficiary's status changes, for example by enrolling in a Medicare Advantage Plan. We exclude these beneficiaries from our Threshold Score calculations because they do not meet criteria to be Attribution-eligible beneficiaries. Although APMs may have reconciliation processes in place to address changes in beneficiary status at

various intervals, those processes do not necessarily coincide with the timeframe of QP determinations. Therefore, when calculating Threshold Scores for QP determinations, we exclude from the list of Attributed beneficiaries any beneficiaries who do not meet the criteria to be Attribution-eligible beneficiaries at that point in time.

(b) Attribution-eligible beneficiary:

An Attribution-eligible beneficiary is a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of one claim for E/M services furnished by an eligible clinician who is

in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

Our stated intent when we finalized the definition of Attribution-eligible beneficiary (81 FR 77451 through 77452) was to have a definition that would, for the purposes of QP determinations, allow us to be consistent across Advanced APMs in how we consider the population of beneficiaries served by an APM Entity. The criteria we used to define Attribution-eligible beneficiary were aligned with the attribution methodologies and rules for our contemporaneous Advanced APMs. The first five criteria are conditions that are required for a

beneficiary to be attributed to any Advanced APM. The sixth criterion identifies beneficiaries who have received certain services from an eligible clinician who is associated with an APM Entity for any period during the QP Performance Period. For Most Advanced APMs, we chose to refer to E/M services because many Advanced APMs use E/M services to attribute beneficiaries to their participant APM Entities. Over time we have updated the list of services that are considered to be E/M services for purposes of identifying Attribution-eligible beneficiaries and have published this list as part of the “2023 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1509/2023%20Learning%20Resources%20for%20QP%20Status%20and%20APM%20Incentive%20Payment.zip>.

We also included an exception in this sixth criterion to allow an alternative approach for Advanced APMs that do not base attribution exclusively on E/M services, and thus for which Attributed beneficiaries are not a subset of the Attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M service. To date we have implemented this alternative approach for four Advanced APMs:

- Bundled Payments for Care Improvement Advanced Model.
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track).
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two Sided Risk Arrangement).
- Maryland Total Cost of Care Model (Care Redesign Program).

We have published links to the methodologies we use to identify Attribution-eligible beneficiaries for these Advanced APMs in the “2023 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at <https://qpp-cm-prod->

content.s3.amazonaws.com/uploads/1509/2023%20Learning%20Resources%20for%20QP%20Status%20and%20APM%20Incentive%20Payment.zip.

We adopted the general rule with flexibility to apply alternative methods for this criterion to ensure that, for the Advanced APMs for which attribution is based on services other than E/M services, the Attributed beneficiary population is truly a subset of such Advanced APMs' attribution-eligible populations and, ultimately, so that our way of identifying beneficiaries for purposes of Threshold Score calculations for QP determinations is appropriate for such Advanced APMs. That said, our thinking at the time that we developed these approaches was shaped by the form and nature of the Advanced APMs that existed at that time. A key lesson we have learned over time as we have implemented the APM track of the Quality Payment Program is that, by affording sufficient flexibility within the program, we can both foster innovation in Advanced APMs and simplify our execution of the program. By having a more narrowly-defined default approach to beneficiary attribution (relying on E/M services), we frequently needed to exercise the flexibility to determine an appropriate attribution methodology for an Advanced APM that falls into the exception, which meant that we identified several individually-tailored ways of performing the attribution methodology for each specific Advanced APM. As such, we have come to believe that application of our current regulations may result in increased complexity over time if, as we anticipate, Advanced APMs continue to evolve and use novel approaches to value-based care that may emphasize a broad range of covered professional services.

Further, as we noted in our discussion of the proposal to calculate QP status at the individual NPI level, primary care practitioners generally furnish a higher proportion of E/M services to beneficiaries than do specialists, and as for the Threshold Score calculations described previously, the emphasis on E/M services in our beneficiary attribution policy may have inadvertently encouraged APM Entities to exclude specialists from their Participation Lists.

Under our current policy, if one or more eligible clinicians on the APM Entity's Participation List are furnishing covered professional services to a beneficiary but none of those services are among the E/M services we use for attribution, that beneficiary would not be Attribution-eligible, and therefore, would not be included in our QP determination calculation at all, even though they actually are receiving covered professional services from an eligible clinician on the APM Entity's Participation List.

We are proposing to change the definition of "Attribution-eligible beneficiary" at § 414.1305 so that a single definition using covered professional services will be applied regardless of the Advanced APMs in which the eligible clinician participates. We believe that this complements our proposal to no longer conduct APM Entity group-level QP determinations and switch to making QP determinations at the individual eligible clinician level. We are also concerned that retention of the current policy under which E/M services are the default basis for attribution and special processes are required for Advanced APMs that use a different attribution basis could result in a complex set of unique attribution approaches for Advanced APMs.

In order to create a uniform basis for beneficiary attribution across all Advanced APMs, we are proposing to modify the sixth criterion of the definition of "attribution-eligible beneficiary" at § 414.1305 to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination. By no longer specifying E/M services as the default attribution basis in the sixth criterion, we also eliminate the need for flexibility to use a different attribution basis that ties attribution-eligibility to a specific Advanced APM's attribution methodology. This would simplify and streamline the attribution methodology by making attribution based on covered professional services across all Advanced APMs

The proposal to base attribution eligibility on the receipt of a covered professional service also would address the issue discussed earlier in this section whereby, under our current policy,

beneficiary attribution for purposes of QP determinations is contingent upon the beneficiary receiving an E/M services, and as a result beneficiaries who are actually being provided covered professional services by eligible clinicians on an APM Entity's Participation List are not Attribution-eligible if none of the services provided are E/M services. Under our proposal, because we would consider all covered professional services for attribution, and not solely E/M services, we would be able to include as Attributed beneficiaries those who are receiving only other (non-E/M) covered professional services through the Advanced APM. We believe this proposal would result in a QP calculation that, by including beneficiaries receiving any covered professional service, more accurately reflects eligible clinicians' actual participation in Advanced APMs.

We note that the proposal would not change the dates of service used for purposes of QP determinations. As such, QP determinations at any given snapshot date (March 31, June 30, and August 31, respectively) would be made by including all covered professional services furnished during the QP Performance Period for January 1 through the applicable snapshot date.

We believe that this change would more appropriately recognize the Advanced APM participation of the eligible clinicians for whom these determinations are being made, particularly when considered in conjunction with the proposal to make QP determinations at the individual eligible clinician level. We further believe that this proposal would simplify and streamline QP determinations, and address the challenges to Advanced APM participation reportedly faced by specialists who are less likely than primary care practitioners to provide E/M services.

We seek comment on this proposal to modify the sixth criterion in the definition of "Attribution-eligible beneficiary" at § 414.1305 to include a beneficiary who has a minimum of one claim for a covered professional service furnished by an eligible clinician who is on the

Participation List for the APM Entity at any determination date during the QP Performance Period.

(4) QP thresholds and Partial QP thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019 (performance year 2017). The All-Payer Combination Option, through which QP status is calculated using the Medicare Option as well as an eligible clinician's participation in Other Payer Advanced APMs, has been applicable since payment year 2021 (performance year 2019). In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b).

Section 4111(a)(2) of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) amended section 1833(z)(2) of the Act by extending for payment years 2024 and 2025 (performance years 2022 and 2023) the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. Specifically, section 4111(a)(2) of the CAA, 2023, amended section 1833(z)(2) of the Act to continue the QP payment amount thresholds that applied in payment year 2024 (performance year 2022) to payment year 2025 (performance year 2023). Additionally, section 4111(a)(2) of the CAA, 2023, amended section 1833(z)(2) of the Act to require that, for payment year 2025, the Secretary use the same percentage criteria for the QP patient count threshold that applied in payment year 2022. As such, the Medicare Option QP thresholds for payment year 2025 will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The CAA, 2023, also amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2025

the Partial QP thresholds that were established since payment year 2021 under the Medicare Option. Therefore, the Partial QP thresholds for payment year 2025 (performance year 2023) will remain at 40 percent for the payment amount method and 25 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for payment year 2025 (performance year 2023) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for payment year 2025 will be 40 percent for the payment amount method and 25 percent for the patient count method. In order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain minimum threshold percentages under the Medicare Option. For payment year 2025 (performance year 2023), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option to become a QP is 25 percent for the payment amount method or 20 percent under the patient count method. For Partial QP status, the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 20 percent for the payment amount method or 10 percent under the patient count method.

To conform our regulation with the amendments made by the CAA, 2023, we propose to amend § 414.1430 by revising paragraphs (a) and (b) to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count under the Medicare Option and the All-Payer Option with respect to payment year 2025 (performance year 2023) in accordance with the CAA, 2023 amendments.

The proposed revisions to §414.1430(a) and (b) for the Medicare Option and All-Payer Combination Option QP and Partial QP thresholds are as follows:

- Paragraph (a)(1)(iv) to state that for 2025 the amount is 50 percent, and paragraph (a)(1)(v) to state that for 2026 and later, the amount is 75 percent.

- Paragraph (a)(2)(iv) to state that for 2025 the amount is 40 percent, and paragraph (a)(2)(v) to state that for 2026 and later, the amount is 50 percent.
- Paragraph (a)(3)(iv) to state that for 2025 the amount is 35 percent, and paragraph (a)(3)(v) to state that for 2026 and later, the amount is 50 percent.
- Paragraph (a)(4)(iv) to state that for 2025 the amount is 25 percent, and paragraph (a)(4)(v) to state that for 2026 and later, the amount is 35 percent.
- Paragraph (b)(1)(i)(A) to state that for 2021 through 2025 the amount is 50 percent, and paragraph (b)(1)(i)(B) to state that for 2026 and later, the amount is 75 percent.
- Paragraph (b)(2)(i)(A) to state that for 2021 through 2025 the amount is 40 percent and paragraph (b)(2)(i)(B) to state that for 2026 and later, the amount is 50 percent.
- Paragraph (b)(3)(i)(A) to state that for 2021 through 2025 the amount is 35 percent, and paragraph (b)(3)(i)(B) to state that for 2026 and later, the amount is 50 percent.
- Paragraph (b)(4)(i)(A) to state that for 2021 through 2025 the amount is 25 percent, and paragraph (b)(4)(i)(B) to state that for 2026 and later, the amount is 35 percent.

TABLE 53: QP Threshold Score Updates

Medicare Option - Payment Amount Method								
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 (Percent)		2024/2026 and later (Percent)	
QP Payment Amount Threshold	50		50		50		75

	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum

(5) APM Incentive Payment

Prior to amendments made by the CAA, 2023, section 1833(z)(1) of the Act provided for APM Incentive Payments for eligible clinicians who are QPs with respect to a year in each payment year from 2019 through 2024. Specifically, for each of the specified payment years, in addition to the amount of payment that would otherwise be made for covered professional services furnished by an eligible clinician who is a QP for such year, there is an additional lump sum APM Incentive Payment equal to 5 percent of the eligible clinician’s estimated aggregate payment amounts for such covered professional services for the preceding year (which we defined as the “base year”). Covered professional services is defined at § 414.1305, with

reference to the statutory definition at section 1848(k)(3) of the Act, as services for which payment is made under, or based on, the PFS and which are furnished by an eligible clinician (physician; practitioner as defined in section 1842(b)(18)(C) of the Act; PT, OT, or speech-language pathologist; or qualified audiologist as defined under section 1861(11)(4)(B) of the Act).

In the CY 2017 Quality Payment Program final rule (81 FR 77445), we established a policy that, beginning with the 2017 QP Performance Period, the QP Performance Period would be the calendar year that is 2 calendar years before the payment year for the APM Incentive Payment. Thus, we established that the first QP Performance Period would begin on January 1, 2017, the first “base year” (established at 81 FR 77481 and 77482) for which we would use claims for professional services to calculate the 5 percent APM Incentive Payment amount would be in 2018, and the first payment year for the APM Incentive Payment would be in 2019 as required by the statute. Under our previously finalized policies, the QP Performance Period, base year, and payment year continue in this fashion on a rolling basis through payment year 2024, which was the final year for which the statute authorized an APM Incentive Payment. In the CY 2023 PFS final rule (87 FR 70114 through 70116), we explained that, beginning in payment year 2025, which correlates with performance year 2023, the statute did not provide for any type of payment incentive for eligible clinicians who become QPs.

Section 4111(a) of the CAA, 2023 amended section 1833(z)(1) of the Act to provide that eligible clinicians who are QPs with respect to payment year 2025 (performance year 2023) will receive an APM Incentive Payment equal to 3.5 percent of their estimated aggregate payment amounts for Medicare Part B covered professional services in the preceding year. In effect, this statutory change extends the APM Incentive Payment for one additional year, at a new percentage of 3.5 percent rather than 5 percent.

Accordingly, we propose to incorporate the change made by the CAA, 2023, by amending the regulation text at § 414.1450 to add the payment year 2025 APM Incentive

Payment amount of 3.5 percent of covered professional services payments. We propose to amend paragraph (b)(1) to state that the amount of the APM Incentive Payment for payment years 2019 through 2024 is equal to 5 percent and, for payment year 2025, 3.5 percent, of the estimated aggregate payments for covered professional services furnished during the calendar year immediately preceding the payment year.

We also note that the CAA, 2023, did not extend the APM Incentive Payment beyond payment year 2025. Beginning for the 2026 payment year, which relates to the 2024 QP Performance Period, section 1848(d)(1)(A) of the Act specifies that there shall be two separate PFS conversion factors, one for items and services furnished by a QP, and the other for other items and services (the nonqualifying APM conversion factor). Each conversion factor will be equal to the conversion factor for the previous year multiplied by the applicable update specified in section 1848(d)(20) of the Act. The update specified for the conversion factor for QPs will be 0.75 percent, while the update for all others will be 0.25 percent.

(6) Targeted Review of QP determinations

In the CY 2021 PFS final rule (85 FR 84952), we finalized a policy to provide an opportunity for eligible clinicians to bring to our attention potential clerical errors we have may made that could have resulted in the omission of an eligible clinician from a Participation List used for purposes of QP determinations, and for us to review and make corrections if warranted. We also finalized that, after the conclusion of the time period for targeted review, there would be no further review of our QP determination with respect to an eligible clinician for the QP Performance Period. We noted that, consistent with section 1833(z)(4) of the Act, and as provided under § 414.1455(a) of our regulations, there is no right to administrative or judicial review under sections 1869 or 1878 of the Act, or otherwise, of the determination that an eligible clinician is a QP or Partial QP under § 414.1425, or of the determination of the amount of the APM Incentive Payment under § 414.1450.

In the CY 2021 PFS final rule (85 FR 84953), we finalized our proposal to align the timing and procedures for this targeted review process with the MIPS targeted review process as codified at § 414.1385. We noted this alignment would reduce the likelihood of confusion and burden on eligible clinicians and APM Entities.

In light of the transition in incentives for eligible clinicians who are QPs for a year, as provided in statute, from an APM Incentive Payment to the differentially higher PFS conversion factor beginning with the 2024 QP performance period and 2026 payment year, we are proposing at section IV.A.4.j. of this proposed rule to adjust the Targeted Review period in order to meet operational timelines to ensure that we can meet statutory requirements for the application of the differential conversion factors, and the resulting differential PFS payment rates, to eligible clinicians who are, and are not, QPs for the year. As discussed in section IV.A.4.j. of this proposed rule, we believe that adjusting the Targeted Review period will enable us to meet our statutory obligation to apply the differentially higher QP conversion factor beginning on January 1 of each payment year beginning with CY 2026. We encourage readers to review section IV.A.4.j. of this proposed rule.

n. Advanced APMs

(1) General overview

In this section, we address policies regarding several aspects of the Advanced APM criterion for CEHRT use at § 414.1415(a). We are proposing to amend the definition of CEHRT at § 414.1305 that would apply to Advanced APM participants, and modify the Advanced APM CEHRT use criterion at § 414.1415(a) to recognize the CEHRT that is relevant to the clinical practice of participants in the Advanced APM.

We believe the Quality Payment Program must be responsive to, and supportive of, innovation in technology and in provider organization. It is our goal to encourage not only provider ownership of this technology, but full adoption and integration of the most advanced

health information technology (health IT) into clinical practice. We developed these proposals to modify the CEHRT that is required for Advanced APMs with this goal in mind, and we will continue to monitor advancements and opportunities in the health IT space to better prepare and align our program and APMs with the most cutting-edge technologies and innovative provider arrangements, for the benefit of eligible clinicians participating in APMs, and the Medicare beneficiaries we serve.

(2) Background

(a) Advanced APM CEHRT Use Criterion

Under section 1833(z)(3)(D)(i)(I) of the Act, Advanced APMs are those APMs that require participants to use CEHRT. We codified this CEHRT use criterion for Advanced APMs at § 414.1415(a)(1). As such, the CEHRT use criterion under § 414.1415(a)(1) states that, to be an Advanced APM, the APM must require at least a certain percentage of eligible clinicians in each APM Entity participating in the APM, or, for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or health care providers. In the CY 2017 Quality Payment Program final rule, we specified at § 414.1415(a)(1)(i) that an Advanced APM is one that requires at least 50 percent of eligible clinicians in each APM Entity to use CEHRT to document and communicate clinical care to their patients or health providers (81 FR 77410). In the CY 2019 PFS final rule (83 FR 59918), we amended § 414.1415(a)(1) to increase the required percentage from 50 percent to 75 percent.

(b) Definition of CEHRT

Section 1848(o)(4) of the Act defines CEHRT as a qualified electronic health record (as defined in section 3000(13) of the Public Health Service Act, or PHSA) that is certified by the Office of the National Coordinator for Health Information Technology (ONC) pursuant to

section 3001(c)(5) of the PHS Act in accordance with the certification standards that ONC adopted under section 3004 of the PHS Act.

In implementing the definition of CEHRT at § 414.1305 for the MIPS track of the Quality Payment Program, we adopted the definition of CEHRT used for the Medicare EHR Incentive Program (also known as “Meaningful Use”) at § 495.4 (81 FR 77211 through 77213). In the CY 2017 Quality Payment Program final rule, we explained that we intended “to maintain continuity for MIPS eligible clinicians and health IT vendors who may already have CEHRT or who have begun planning for a transition to technology certified to the 2015 Edition based on the definition of CEHRT finalized for the EHR Incentive Programs in the 2015 EHR Incentive Programs final rule” and “to maintain consistency with the EHR Incentive Programs CEHRT definition at 42 CFR § 495.4” (81 FR 77212).

For the Advanced APM track of the Quality Payment Program, we in turn adopted the definition of CEHRT for MIPS under § 414.1305 (81 FR 77409 through 77410). We explained that applying the same definition of CEHRT for purposes of both the MIPS and Advanced APM tracks of the Quality Payment Program would reduce administrative costs and confusion among clinicians and maintain consistency across programs, permitting clinicians to use shared CEHRT systems to participate in either MIPS or Advanced APMs (81 FR 77409 through 77410).

Consequently, the MIPS and Advanced APM tracks of the Quality Payment Program share the same definition of CEHRT at § 414.1305. Since the CY 2019 performance period, this has generally meant EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and that has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition of CEHRT at § 414.1305. The currently applicable definition of CEHRT at § 414.1305 specifically requires that the EHR technology has been certified to the following 2015 Edition health IT certification criteria: (1) family health

history at 45 CFR 170.315(a)(12); (2) patient health information capture at 45 CFR 170.315(e)(3); and (3) as necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, including applicable measure calculation certification criteria at 45 CFR 170.315(g)(1) or (2) and clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures at 45 CFR 170.315(c)(2) and (c)(3)(i) and (ii) (and optionally (c)(4)) and can be electronically accepted by CMS.

Because our definition of CEHRT at § 414.1305 ultimately derives from the definition of CEHRT used for the Meaningful Use Program, our Advanced APMs have required their participants to use CEHRT that is capable of meeting all requirements of a qualified EHR. As such, Advanced APMs generally require participants to use CEHRT that meets requirements for 2015 Edition Base EHR (as defined at 45 CFR 170.102); all requirements of Meaningful Use set forth in section 1848(o)(2) of the Act; and all requirements for reporting on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category. When we adopted the same definition of CEHRT at § 414.1305 for purposes of MIPS and Advanced APMs in the CY 2017 Quality Payment Program final rule, we acknowledged that such a policy may include some requirements not directly applicable to the APM Entities' practice.

Specifically, we stated at that time that “we understand this proposed CEHRT definition may include some EHR functionality used by MIPS eligible clinicians which may be less relevant for an APM participant and likewise APM participants may use additional functions that are not required for MIPS participation” (81 FR 77409). At the time, we reasoned that “using the same CEHRT definition for both MIPS and Advanced APMs would allow eligible clinicians to continue to use shared EHR systems and give eligible clinicians flexibility of participation as a MIPS eligible clinician or an eligible clinician in an Advanced APM without needing to change or upgrade EHR systems” (81 FR 77409).

Although we acknowledged that this CEHRT definition may impose more rigorous requirements on APM participants than necessary, we nonetheless maintained that “we generally want APMs to retain the flexibility to require activities performed using CEHRT that may vary from those prescribed under the advancing care information performance category in MIPS” (81 FR 77412).³²⁷ We also recognized that aligning the CEHRT definition for Advanced APMs with MIPS “would go beyond what the statute requires” (81 FR 77412). When we adopted the CEHRT definition for MIPS and Advanced APMs, one commenter suggested that our proposed CEHRT criterion for Advanced APMs was narrow, and that “a strong, broad health IT infrastructure should be a key element used to identify Advanced APMs rather than the narrow proposed CEHRT criteria” (81 FR 77410). We agreed that “Advanced APMs need a strong health IT infrastructure as a foundation for communicating and delivering comprehensive and coordinated care to their patients,” but at that time we wanted to prioritize continuity between the two tracks of the Quality Payment Program to maximize flexibility for eligible clinicians. However, we indicated that we would be prepared to update this definition as needed in the future.

(3) Proposal to Update CEHRT definition and CEHRT Use Criterion for Advanced APMs

After several years of experience with the uniform definition of CEHRT for purposes of MIPS and Advanced APMs, and based on input we have received from interested parties, we now believe that the standard for CEHRT use for Advanced APMs may have been unnecessarily burdensome, imposing unwarranted barriers to organization of and participation in Advanced APMs, and not clinically relevant for many prospective and current participants in Advanced

³²⁷ Section 1848(q)(2)(A)(iv) and (B)(iv) of the Act requires that the Secretary assess MIPS eligible clinicians’ performance with respect to the “meaningful use of certified EHR technology” in accordance with the requirements set forth at section 1848(o)(2) of the Act as one of the four performance categories for MIPS. In the CY 2017 Quality Payment Program final rule, we named this required MIPS performance category the “advancing care information performance category.” (81 FR 77010). We have since renamed this MIPS performance category, requiring the meaningful use of CEHRT, as the “Promoting Interoperability performance category.” (85 FR 84820 through 84821).

APMs. As previously discussed, our policy at § 414.1415(a)(1)(i) currently requires that at least 75 percent of eligible clinicians in each participating APM entity group, and each hospital that are APM Entities, to use CEHRT, as defined in § 414.1305, to document and communicate clinical care to their patients or health care providers. By referring in the Advanced APM CEHRT use criterion to CEHRT, as defined in § 414.1305, Advanced APMs required participants to adopt and implement health IT that is capable of meeting all requirements of a qualified EHR, which means CEHRT that meets all requirements for 2015 Edition Base EHR (as defined at 45 CFR 170.102); all requirements of Meaningful Use set forth in section 1848(o)(2) of the Act; and all requirements for reporting on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category. We have heard from many interested parties that our requirements for use of CEHRT are falling short of some of our intended goals. Specifically, we have heard from many interested parties that our current requirements for use of CEHRT have led Advanced APMs to apply an inflexible standard that does not allow them to take into account whether certain CEHRT modules are relevant for, and applicable to, the specific clinical practice areas of their intended or actual participants. By placing a broad set of requirements for use of CEHRT, particularly regarding the criteria the health IT must be certified as meeting to satisfy our definition of CEHRT at § 414.1305, interested parties report that we are needlessly burdening some potential and actual APM participants because they must adopt health IT modules that are not always clinically relevant across provider types that would participate in an Advanced APM. Specifically, interested parties noted that our requirement that Advanced APMs must require participants to use health IT certified as meeting criteria necessary to report on objectives and measures of the MIPS Promoting Interoperability performance category, even when such health IT is not clinically relevant for or applicable to APM participants' practice, is needlessly burdensome and a barrier to innovation and participation in APMs . To support their position, interested parties noted as an

example, that application of our current Advanced APM CHERT use criterion and associated CEHRT definition has required specialists in the Kidney Care Choices (KCC) Model or providers in the ACO Realizing Equity, Access, and Community Health (REACH) Model to purchase certified Health IT Modules beyond those required as part of the 2015 Edition Base EHR definition at 45 CFR 170.102 that are not immediately necessary or applicable to their clinical practice.

We have learned that Advanced APMs have not had the flexibility to require certified health IT that is tailored to their specific participants' practice areas. Likewise, we could envision a scenario where, to achieve Advanced APM status under our current policy, an APM or APM Entity would exclude from participation specialists or other eligible clinician types, such as pathologists, for whom compliance with our current CEHRT requirements beyond the Base EHR definition would be burdensome and beyond the scope of their typical practice, even though participation of such eligible clinicians would be relevant and beneficial to the goals of the APM.

For Advanced APMs, we believe that it is important both to apply a rigorous standard for use of CEHRT and to allow sufficient flexibility to Advanced APMs to specify CEHRT modules that are clinically relevant for their participants. We believe that our current CEHRT use requirements meet the former goal (application of a rigorous standard), but not the latter (allowing sufficient flexibility).

Further, our current CEHRT use criterion specifies that 75 percent of participants in the APM must use CEHRT as defined in § 414.1305, and allows for 25 percent of participants to not have or use CEHRT. This policy establishes a minimum percentage of Advanced APM participants must use CEHRT, but without consideration of which eligible clinicians in each participating APM Entity (or hospital) must use CEHRT, or whether it is clinically appropriate for any of those eligible clinicians to not use CEHRT. As such, this policy could allow eligible clinicians who could and should be using CEHRT to forego CEHRT use solely because enough

of their colleagues are using CEHRT to meet the requirement of the Advanced APM. Additionally, we have heard from interested parties that, for most Advanced APM participants, CEHRT use among eligible clinicians is close to 100 percent. Given this information and the fact that the 70 percent CEHRT use standard has been in effect for almost five years, we believe it would be appropriate to re-evaluate our approach to the application of the CEHRT use requirement to Advanced APMs and their participants. We want to maintain the rigor of our CEHRT use criterion for Advanced APMs while providing Advanced APMs flexibility to require CEHRT use that is applicable for the practice areas of their participants and their eligible clinicians. Further, we believe any exceptions to CEHRT use that are permitted under the Advanced APM should be based on clinical appropriateness, rather than on generalized application of percentages.

First, we are proposing to amend the definition of CEHRT at § 414.1305 by adding a new paragraph (3) to specify that, for purposes of the Advanced APM criterion under § 414.1415(a)(1), beginning with CY 2024, CEHRT means EHR technology certified under the ONC Health IT Certification Program that meets: (1) the 2015 Edition Base EHR definition, or any subsequent Base EHR definition (as defined in at 45 CFR 170.102); and (2) any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice areas involved, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM.

We believe our proposal to update the definition of CEHRT for Advanced APMs at § 414.1305 would provide flexibility to each APM to determine what CEHRT functionalities are relevant to the model and its participant APM Entities and eligible clinicians. We believe that providing Advanced APMs with the greater flexibility permitted by the statute with respect to

requiring CEHRT use will foster innovation in model design and diversity in APM participation. Specifically, we believe our proposed amendment to the CEHRT definition at § 414.1305 will facilitate innovation in APM design, and enable a broad range of participants and their eligible clinicians to meet Advanced APM CEHRT use requirements by adopting health IT that satisfies the 2015 Edition Base EHR definition at 45 CFR 170.102 and is certified as meeting other ONC health IT certification criteria adopted, or updated in 45 CFR 170.315, as is clinically relevant to their practice, without unnecessarily obtaining other health IT, such as the health IT necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category.

We note that participation in an Advanced APM does not automatically exclude eligible clinicians from MIPS. Eligible clinicians in an Advanced APM who do not achieve Qualifying APM Participant (QP) status or Partial QP status, or who are not otherwise exempt from MIPS, are subject to MIPS reporting requirements and the MIPS payment adjustment. Our proposed amendment to the CEHRT definition under paragraph (3) at § 414.1305 for Advanced APMs has limited effect upon the requirement to participate in MIPS if QP or Partial QP status is not achieved. Accordingly, under our proposal, eligible clinicians in Advanced APMs would still need to be prepared to report to MIPS, including using CEHRT as necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, in the event that they do not achieve QP or Partial QP status.

In section IV.A.4.f.(4) of this proposed rule, we are also proposing other modifications to the CEHRT definition at § 414.1305 to be more flexible in reflecting any changes ONC may make to its Base EHR definition, certification criteria, and other standards for health IT at 45 CFR part 170. Our proposed amendment to the CEHRT definition under paragraph (3) at § 414.1305 for Advanced APMs is consistent with our other proposed amendments as set forth in section IV.A.4.f.(4) of this proposed rule.

Second, we are proposing to amend our current Advanced APM CEHRT use criterion at § 414.1415(a)(1). Specifically, we propose to amend the regulation to end the current 75 percent CEHRT use requirement at § 414.1415(a)(1)(i) with the CY 2023 QP performance period. Then we propose to add a new paragraph at § 414.1415(a)(1)(iii) to specify that, to be an Advanced APM, the APM must require all eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the participants, each hospital, to use CEHRT that meets our proposed new paragraph (3) of the CEHRT definition at § 414.1305. In essence, we are proposing to no longer specify a minimum number of eligible clinicians that an Advanced APM must require to use CEHRT, and instead, simply specify that the Advanced APM must require all participating eligible clinicians to use CEHRT that meets our proposed modified, and more flexible, definition. We are also proposing to revise § 414.1415 by making non-substantive technical edits to paragraphs (a)(1)(i) and (a)(1)(ii) to improve clarity.

This proposal is consistent with section 1833(z)(3)(D)(i)(I) of the Act, which generally requires that Advanced APMs require their participants to use CEHRT as defined in section 1848(o)(4) of the Act. We believe this proposed amendment to the Advanced APM CEHRT use criterion will further enhance innovation in Advanced APM development and diversity in participation, allowing for novel APM Entity compositions, because Advanced APM participants will no longer have to concern themselves with what percentage of eligible clinicians meet our current CEHRT requirements. We further believe that, under our more flexible proposed CEHRT definition and Advanced APM CEHRT use criterion, Advanced APMs could create their own CEHRT use requirements, potentially beyond what we currently require, tailored to the various types of clinicians and practice areas the Advanced APM intends to include in its model. We believe our proposal would permit Advanced APMs to recruit and retain participants that represent a variety of practice types, and to require different types of EHR technologies certified under the ONC Health IT Certification Program as meeting the 2015 Edition Base EHR

definition, or subsequent Base EHR definition, at 45 CFR 170.102 and additional ONC health IT certification criteria adopted and updated in 45 CFR 170.315 as specifically applicable to different types of clinical practice.

We seek comment on this proposal.

(4) All Payer Advanced APMs

In the CY 2017 Quality Payment Program final rule (81 FR 77459), we proposed policies, effective beginning for performance year 2021, that would allow eligible clinicians to earn QP status through participation in a combination of payment arrangements designed and implemented by Other Payers and Medicare Advanced APMs. The statute includes a CEHRT use criterion for Other Payer Advanced APMs as it does for Medicare Advanced APMs, and we finalized the same CEHRT use criterion for Other Payer Advanced APMs as for Medicare Advanced APMs (81 FR 77463). Likewise, in this rule, we are proposing to amend the Other Payer Advanced APM criteria at § 414.1420(b) to conform to the changes we now propose for the Medicare Advanced APMs, and to be reflected in amendments to § 414.1415(a)(1)(i), to remove the 75 percent minimum CEHRT use requirement for Advanced APMs and replace it with a more flexible CEHRT use requirement based on our proposed revised definition of CEHRT for purposes of Advanced APM determinations. We are also proposing to revise § 414.1420(b) by making additional non-substantive technical edits to improve clarity.

The changes we are proposing for Medicare Advanced APMs are designed to require use of technologically sufficient EHRs, while affording Advanced APMs the ability to tailor additional CEHRT use requirements to those features or capabilities that are clinically relevant to the APM and its participants. We believe that this same flexibility should be afforded in the context of Other Payer Advanced APMs. The All Payer Combination Option through which we consider the participation of eligible clinicians in Other Payer Advanced APMs offers an additional pathway to achieve QP status for eligible clinicians participating in both Medicare

Advanced APMs and Other Payer Advanced APMs. Under the All Payer Combination Option, we consider the combined participation of eligible clinicians in Medicare and Other Payer Advanced APMs. Similar to the statutory CEHRT use requirement for Advanced APMs under section 1833(z)(3)(D)(i)(I) of the Act, section 1833(z)(2)(iii)(II)(bb) of the Act specifies that Other Payer Advanced APMs are those under which CEHRT is used. Since the All Payer Combination Option for QP determinations involves the same eligible clinician participants as the Medicare Option, and considers participation in both Medicare Advanced APMs and Other Payer Advanced APMs, we believe we should continue to apply the same CEHRT use standard for both Medicare and Other Payer Advanced APMs. Further, we believe the same need exists for flexibility in the CEHRT that is required to be used in Other Payer Advanced APMs. This would allow Other Payer Advanced APMs to structure their CEHRT use requirements to be clinically relevant to the APM and participating eligible clinicians, and avoid the need to obtain clinically unnecessary technology simply for purposes of meeting what we now believe to be an overly restrictive CEHRT use criterion.

We seek comment on this proposal.

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 et seq.), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of the PRA’s implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.

- The accuracy of our burden estimates.

- The quality, utility, and clarity of the information to be collected.

- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment (see section VI. of this proposed rule) on each of these issues for the following sections of this document that contain information collection requirements. Comments, if received, will be responded to within the subsequent final rule.

A. Wage Estimates

Private Sector: To derive average costs, we used data from the U.S. Bureau of Labor Statistics' (BLS) May 2022 National Occupational Employment and Wage Estimates for all salary estimates (https://www.bls.gov/oes/2022/oes_nat.htm). In this regard, Table 54 presents BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

**TABLE 54: National Occupational Employment and Wage Estimates
(Excluding Physicians)**

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and other indirect costs (\$/hr)	Adjusted hourly wage (\$/hr)
Billing and Posting Clerks	43-3021	21.54	21.54	43.08
Business Operations Specialists	13-1000	40.04	40.04	80.08
Computer System Analysts	15-1211	51.70	51.70	103.40
Financial Specialists	13-2000	44.37	44.37	88.74
General and Operations Manager	11-1021	59.07	59.07	118.14
Licensed Practical and Licensed Vocational Nurses	29-2061	26.86	26.86	53.72
Medical and Health Services Managers	11-9111	61.53	61.53	123.06
Secretaries and Administrative Assistants	43-6014	20.87	20.87	41.74

For our purposes, BLS’ May 2022 National Occupational Employment and Wage Estimates does not provide an occupation that we could use for “Physician” wage data. To estimate a Physician’s costs, we are using an average conglomerate wage of \$274.44/hr as demonstrated below in Table 55.

**TABLE 55: National Occupational Employment and Wage Estimates
(Physicians)**

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Anesthesiologists	29-1211	145.66	145.66	291.32
Family Medicine Physicians	29-1215	107.91	107.91	215.82
General Internal Medicine Physicians	29-1216	108.30	108.30	216.60
Obstetricians and Gynecologists	29-1218	133.33	133.33	266.66
Orthopedic Surgeons, Except Pediatric	29-1242	178.56	178.56	357.12
Pediatric Surgeons	29-1243	174.51	174.51	349.02
Pediatricians, General	29-1221	97.71	97.71	195.42
Physicians, All Other	29-1229	114.76	114.76	229.52
Psychiatrists	29-1223	118.92	118.92	237.84
Surgeons	29-1240	162.49	162.49	324.98
Surgeons, All Other	29-1249	167.25	167.25	344.50
Total				3,018.80
Average Physician Wage (3,018.80/11)				274.44

Beneficiaries: We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of \$21.98/hr.

The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices³²⁸ identifies the approach for valuing time when individuals undertake activities on their own time. To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of \$1,059³²⁹ for 2022, divided by 40 hours to calculate an hourly pre-tax wage rate of \$26.48/hr. This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 17 percent or \$4.50/hr ($\$26.48/\text{hr} \times 0.17$), resulting in the post-tax hourly wage rate of \$21.98/hr ($\$26.48/\text{hr} - \$4.50/\text{hr}$). Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

B. Proposed Information Collection Requirements (ICRs)

1. ICRs Requiring Manufacturers of Certain Single-dose Container or Single-use Package Drugs to Provide Refunds with Respect to Discarded Amounts (§ 414.940)

The following proposed changes will be submitted to OMB for review under control number 0938-1435 (CMS-10835).

As discussed in section III.A. of this proposed rule, as a part of implementing section 1847A(h) of the Act, as added by section 90004 of the Infrastructure Act, the Secretary is authorized to recognize, through notice and comment rulemaking, drugs with unique circumstances that justify an increase of the applicable percentage greater than 10 percent. In section III.A.3.d of this proposed rule, we are proposing modifications to § 414.940 to establish

³²⁸ https://aspe.hhs.gov/sites/default/files/migrated_legacy_files/176806/VOT.pdf.

³²⁹ <https://fred.stlouisfed.org/series/LEU0252881500A>.

an application process for drug manufacturers to request an increased applicable percentage for an individual drug product based on its unique circumstances.

We are proposing that, to request we consider increasing the applicable percentage for a particular refundable drug, a manufacturer must submit the following: (1) a written request that a drug be considered for an increased applicable percentage based on its unique circumstances; (2) FDA-approved labeling; (3) justification for the consideration of an increased applicable percentage based on such unique circumstances; and (4) justification for the requested increase in the applicable percentage. Such justification could include documents, such as (but not limited to) a minimum vial fill volume study or a dose preparation study.

As discussed in section VII.E.4. of this proposed rule, our estimates show a projected 28 billing and payment codes meeting the definition of refundable single-dose container or single-use package drug with 10 percent or more discarded units, which is the applicable percentage specified in section 1847A(h)(3) of the Act. Therefore, we anticipate a similar number of drugs could owe a refund under section 90004 of the Infrastructure Act. Since 25 of those billing codes have an estimated annual refund obligation of over \$50,000, we expect that, initially (that is, the first year the proposed application process is available), the manufacturers of those 25 drugs to submit an application for consideration of an increased applicable percentage based on unique circumstances.

Once a manufacturer has applied for a drug and a decision has been made regarding whether an increased applicable percentage is appropriate, the manufacturer would not need to apply again. Therefore, subsequent years we would expect a smaller number of applications. When evaluating the approval dates of these 25 drugs, we find that there is a range of 0 to 4 drugs per year approved that would be expected to owe a refund of more than \$50,000 per year. From 2010 through 2020, the mean number of such approvals is 1.45 per year. If rounded up,

we estimate that we would typically receive 2 applications per subsequent to the initial application year.

We estimate that the burden per respondent/applicant of drafting and submitting the unique circumstance application to be 5 hours. As we anticipate 25 applications in the initial year that applications are available, we estimate a total burden of 125 hours (25 applications x 5 hr) per at a cost of \$5,218 (\$41.74/hr x 125 hr). For subsequent years, we estimate a total annual burden related to drafting and submission of 10 hours (2 applications x 5 hr per respondent/applicant) at an annual cost of \$418 (41.74/hr x 10 hr).

2. ICRs Regarding the Clinical Laboratory Fee Schedule: Data Reporting by Laboratories

As described in section III.D of this proposed rule, under the Clinical Laboratory Fee Schedule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories,” and we proposed to revise the regulations at §414.504(a)(1) to account for a delay in reporting until January 1, 2024 through March 31, 2024. As stated in section 1834A(h)(2) of the Act, chapter 35 of title 44 U.S.C., which includes such provisions as the PRA does not apply to information collected under section 1834A of the Act. Consequently, we are not setting out any proposed burden estimates under this section of the proposed rule. Please refer to section VII.E.7. of this proposed rule for a discussion of the impacts associated with the changes described in section III.D. of this proposed rule.

3. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out proposed Shared Savings Program burden estimates under this section of the preamble. Please refer to section VII.E.10. of this proposed rule for a discussion of the impacts

associated with the changes to the Shared Savings Program as described in section III.G. of this proposed rule.

4. ICRs Regarding the Updates to the Medicare Diabetes Prevention Program

In section III.L. of this proposed rule, we propose to extend specific Medicare Diabetes Prevention Program (MDPP) flexibilities allowed during the PHE for COVID-19 1135 waiver event by 4 years. In addition, we are proposing to update the MDPP payment structure to pay for beneficiary attendance on a fee-for-service basis while retaining the diabetes risk reduction performance payments. Finally, we are proposing to remove the requirement for MDPP interim preliminary recognition and replace it with CDC preliminary recognition as well as remove most references to, and requirements of, the Ongoing Maintenance Sessions given that eligibility for these services will end on December 31, 2023. We expect the proposed policies will increase the number of eligible organizations willing to enroll as MDPP suppliers. We also anticipate that the extended PHE flexibilities will make MDPP more marketable to both suppliers and beneficiaries due to the continued flexibility in how the MDPP set of services are delivered live, either in-person or virtually (or a combination of the two). We anticipate the proposed payment structure changes will motivate suppliers to retain participants due to more frequent payments. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions.

5. Appropriate Use Criteria for Advanced Diagnostic Imaging

As discussed in section III.J. of this proposed rule, we are proposing to pause efforts to implement the Appropriate Use Criteria (AUC) for Advanced Diagnostic Imaging Services program for reevaluation and to rescind the current AUC program regulations at § 414.94. The program was established in the Protecting Access to Medicare Act of 2014 (PAMA) and we have used rulemaking over the ensuing years to stand up the program in phases while aiming for a

clinically useful and least provider-burdensome approach. At this time, we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization. As a result, we propose in section III.J. of this proposed rule to pause implementation of the AUC program for reevaluation, and rescind the current AUC program regulations from § 414.94.

The following collection of information requests would be affected by this rule's proposal to rescind the AUC program regulations from § 414.94: CMS-10570 (OMB 0938-1288), CMS-10624 (OMB 0938-1315), and CMS-10654 (OMB 0938-1345). Given that the AUC program regulations, which include these information collection requirements, would be rescinded, all three collections would no longer be needed.

CMS-10570 (OMB 0938-1288) relates to the application and qualification process for provider-led entities (PLEs). If we finalize the proposal and rescind the current regulations at § 414.94, then we will discontinue this collection of information. The following table scores the impact of discontinuing the requirements and burden that are currently active and approved by OMB under the aforementioned control number, showing an expected 10 re-applications per year. We note however, that because we received less than 10 applicants in each year 2017-2022, there have been and will continue to be fewer than 10 re-applicants each year. In fact, the number of PLEs has overall decreased as qualified PLEs exit the program, choosing not to re-apply. In 2022 we expected all seven PLEs approved in 2017 to reapply; however, only two submitted re-applications and were re-qualified. For 2023, we froze the re-application process, continuing the approval of the three PLEs that had initially qualified in 2018. If we were not proposing to pause the AUC program and rescind the current regulations at § 414.94, then we

would expect one re-application in 2024 and no re-applications in 2025.

At the time of the last approval in 2021, we expected the burden for PLEs re-applying for qualification to be half the burden of the initial application process. In the explanation below, we continue to use the previously approved number of responses, respondents and time, while updating the labor cost to reflect May 2022 BLS wages. As previously estimated, the PLEs would be able to make modifications to their original application which should result in a burden of 10 hours at \$80.08/hr for a business operations specialist (occupation code 13-100) to compile, prepare and submit the required information, 2.5 hours at \$123.06/hr for a medical and health services manager (occupation code 11-911) to review and approve the submission, and 2.5 hours at \$242.3/hr for a physician (occupation code 29-1210) to review and approve the submission materials. Annually, we estimate 15 hours per submission at a cost of \$1,714.2 per organization. In aggregate, we estimate 150 hours (15 hr x 10 submissions) at \$17,142 (\$1,714 x 10 submissions).

TABLE 56: Burden of Pausing AUC Program Implementation Efforts for Reevaluation and Rescinding § 414.94

Regulation Section(s)	Respondents	Total Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost of Reporting (\$/hr)	Total Cost (\$)
§ 414.94(c)(2) (reapplication)	(10)	(10)	(15)	(150)	(1,714.2)	(17,142)

CMS-10624 (OMB 0938-1315) relates to the application and qualification process for Clinical Decision Support Mechanisms (CDSMs). This collection of information is no longer active. CMS-10624 was first approved on March 6, 2017, and was associated with the CY 2017 Physician Fee Schedule final rule (November 15, 2016; 81 FR 80170). CMS-10624 last expired on March 31, 2020. In June 2020, CMS filed a request to discontinue CMS-10624 (OMB 0938-1315).

CMS-10654 (OMB 0938-1345) relates to the consultation of AUC through a qualified

CDSM by an ordering professional or clinical staff acting under the direction of the ordering professional. While this collection of information is no longer active, the impact of discontinuing the requirements and burden is addressed in this proposed rule RIA (*see* section VII. Regulatory Impact Analysis of this proposed rule).

6. ICRs for Medicare Provider and Supplier Enrollment

None of this rule's Medicare and Medicaid provider enrollment provisions propose any new, revised, or removed information collection requirements or burden. Regarding the proposal to reduce the timeframe for reporting practice location changes from 90 days to 30 days, this change would not alter the requirement for disclosing the change via the applicable Form CMS-855 or Form CMS-20134. It would only revise the timeframe in which the change must be reported. Hence, there would be no change in the ICR burden.

7. ICRs Regarding the Medicare Ground Ambulance Data Collection System (GADCS) (§414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, we are not setting out any proposed burden estimates under this section of the rule.

8. ICRs Related to the Changes in the RHC/FQHC CfCs and Hospice CoPs

a. Permitting MFT and MHCs to furnish services in RHC/FQHCs

The following proposed changes will be submitted to OMB for review under control number 0938-0344 (CMS-R-38).

In section III.C. of this proposed rule, we implement section 4121 of the CAA by proposing conforming changes at § 491.8(a)(3) and (a)(6) that would add MFT and MHCs to the list of staff who may be the owner or an employee of the clinic or center or may furnish services under contract to the clinic or center as well as included as staff available to furnish patient care services at all times the clinic or center operates. If an RHC or FQHC provides services furnished by an MFT or MHC they would be required to update their patient care policy, as set out in section § 491.9(b)(2) of the CfCs.

The existing requirement at § 491.9(b)(2), *Patient care policies*, requires that policies are developed with the advice of a group of professional personnel that includes one or more physicians and one or more physician assistants or nurse practitioners, with at least one member who is not a member of the clinic or center staff. The patient care policies must describe the services the clinic or center furnishes directly, through agreement or arrangement, guidelines for medical management of health problems, and rules for the storage, handling, and administration of drugs and biologicals.

As we are proposing to include MFTs and MHCs as professionals who can provide services in an RHC and FQHC, there will be a burden associated with the existing requirement at § 491.9(b)(3)(i). This requirement states that policies include “A description of the services they provide directly or through agreement or arrangement.” Therefore, if an RHC or FQHC provides services furnished by an MFT or MHC they must update their policies to include a description of the services provided.

We note that the time and effort required to conduct this activity will vary depending on if a clinic or center chooses to provide services furnished by an MFT or MHC. We also believe that some RHCs and FQHCs may already provide services furnished by an MFT or MHC. State Medicaid programs can cover ambulatory care services (including mental health and substance use disorder services) under a number of different mandatory Medicaid benefits such as

outpatient hospital services, physician services, RHC and FQHC services, as well as optional benefits such as rehabilitative services, and services of other licensed practitioners.

The National Association of Community Health Center's 2017 policy assessment suggests that 21 State Medicaid programs cover services provided by MFTs, and 25 State Medicaid programs cover services provided by licensed professional counselors.³³⁰ Due to approximately half of the State's Medicaid programs already covering services furnished by an MFT or MHC and the assumption that some centers and clinics will not provide these services, we believe only 50 percent of RHCs and 50 percent of FQHCs will incur this burden. The total RHCs and FQHCs who will have to meet this 1-time burden is 2,643 clinics and 5,643 centers, or 8,286 combined.^{331,332}

Each clinic or center is required by the existing requirement at 491.9(b)(2) to have at least two clinical professionals (one physician/administrator at \$229.52/hr and one advanced practice provider at \$119.88/hr) reviewing and updating the policies. We estimate that it takes existing RHCs and FQHCs 4 hours every 2 years for clinical staff to review and make changes to all patient care policies. Based on this, we estimate that adding MFT and MHC services (as necessary) to the patient care policies would take approximately 15 minutes (.25 hr) for each clinical professional. In aggregate, we estimate an annual burden of 2,071.50 hours (0.25 hr x 8,268 RHC and FQHCs) at a cost of \$361,891.05 [(1,035.75 hr x \$229.52/hr) + (1,035.75 hr x \$119.88/hr)].

³³² https://qcor.cms.gov/active_nh.jsp?which=11&report=active_nh.jsp&jumpfrom=#pagetop

TABLE 57: One-time Burden for Time Spent on Clinics or Centers Updating Patient Care Policies to Include a Description of MFT and MHC Services

Occupation	Hourly wage (a)	One-time hourly burden (b)	Number of clinics and centers (c)	Total time (d)=(b) x (c)	One-time cost estimate	
					(a) x (d)	
Physician	\$229.52	.25 hr	8,286		1035.75	\$237,725.34
Advanced Practice Provider	\$119.88	.25 hr	8,286		1035.75	\$124,165.71
Total:	Varies				2071.50	\$361,891.05

b. ICRs related to Permitting MFTs and MHCs to Serve as Members of the Interdisciplinary Group (IDG) in Hospices (§ 418.56 and § 418.114)

In section III.O. of this proposed rule, we would implement subtitle C, section 4121 of the CAA 2023 by proposing conforming changes at § 418.56(a)(1)(iii) that would permit MFTs or MHCs, in addition to social workers, to serve as members of the IDG. The conforming change would require hospices to include at least one SW, MFT or MHC to serve as a member of the IDG. Hospices would have the flexibility to determine which discipline(s) are appropriate to serve on the IDG based on the needs of the patients. We believe that with the introduction of MHC and MFT into the hospice CoPs, it is important to include these new disciplines into the personnel qualifications at § 418.114.

In this rule we are also proposing to add both MFT and MHC to the provider requirements under 42 CFR subpart B (Medical and Other Health Services) at §§ 410.53 and 410.54. Therefore, to avoid duplication and confusion between the CoP and the provider requirements under the Medical and Other Health Services provision, we are proposing to add both MFT and MHC to the requirements at § 418.114(c)(3) and (4) and referencing the new requirement at §§ 410.53 and 410.54, respectively.

In accordance with the implementing regulations of the PRA at 5 CFR 1320.3(b)(2), we believe that both the existing requirements and the proposed revisions to the requirements at §§ 418.56(a)(iii) and 418.114(c)(3) and (4) are exempt from the PRA. We believe permitting

hospices the ability to select one of these disciplines (SW, MFT or MHC) to serve as a member of the IDG and the addition of both MFT and MHC to the personnel requirements with reference to the new requirement at §§ 410.53 and 410.54 respectively, is reasonable and customary business practice. We state such in the information collection request that is currently approved under OMB control number: 0938-1067 ((CMS-10277)). Therefore, we are not proposing to seek OMB's approval for any information collection or recordkeeping activities that may be conducted in connection with the proposed revisions to §§ 418.56(a)(1)(iii) and 418.114(c)(3) and (4), but we request public comment on our determination that the time and effort necessary to comply with these evaluation requirements is usual and customary and this time and effort would be incurred by hospice staff even absent this regulatory requirement.

9. RFI: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988

Please note that this is an RFI only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

This RFI is issued solely for information and planning purposes; it does not constitute a Request for Proposal, applications, proposal abstracts, or quotations. This RFI does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, we are not seeking proposals through this RFI and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs

incurred in response to this RFI; all costs associated with responding to this RFI will be solely at the interested party's expense. We note that not responding to this RFI does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this RFI announcement for additional information pertaining to this request. In addition, we note that we will not respond to questions about the policy issues raised in this RFI.

We will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance. We may or may not choose to contact individual responders. Such communications would be for the sole purpose of clarifying statements in the responders' written responses. Contractor support personnel may be used to review responses to this RFI. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of this RFI may be used by the Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. This RFI should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned.

10. Basic Health Program (BHP) Provisions

a. Proposed Information Collection Requirements (ICRs)

The following proposed changes will be submitted to OMB for review under OMB control number 0938-1218 (CMS-10510).

(1) ICRs Regarding the BHP Blueprint (§ 600.125)

We propose at § 600.125(a)(1)-(3) that Blueprint revisions must be submitted to reflect: (1) changes in Federal laws, regulations, policy interpretations or court decisions that affect provisions in the certified Blueprint; (2) significant changes that alter core program operations or

the BHP benefit package; or (3) changes to enrollment, disenrollment, and verification policies described in the certified Blueprint. We note that only § 600.125(a)(1) is a new requirement. The requirements under § 600.125(a)(2) and (3) are existing. We propose at § 600.125(b) that a State may submit revisions to its certified Blueprint at any time within the same quarter of the proposed effective date of revised Blueprint. We propose at § 600.125(c) that HHS must review the revised Blueprint within 90 calendar days or provide the State written notice of disapproval or additional information it needs to make a final determination.

We estimate that, on average, a State operating a BHP will submit one revised Blueprint in response to § 600.125(a)(1) annually. Because only two States are currently certified to operate a BHP, we are providing the burden estimate for two States. We estimate that the proposal under § 600.125(a)(1) will increase State burden. We estimate that the proposals under § 600.125(b) and (c) will have no impact on State burden. We estimate that, on average, it will take a State 4 additional hours at \$80.08/hr for a Business Operations Specialist and 2 additional hours at \$118.14/hr for a General Manager to meet the new Blueprint requirements under § 600.125(a)(1). In aggregate, we estimate an increased burden of 12 hours (2 States x 6 hr/State) at a cost of \$1,113 [2 States x ((4 hr x \$80.08/hr) + (2 hr x \$118.14/hr))]. We note that this cost will be incurred 100 percent by the State, as Federal BHP funds cannot be used for program administration.

(2) ICRs Regarding the Operation of a BHP (§§ 600.145(a), 600.145(f)(2), and 600.330(f))

We propose at § 600.145(a) that a State must implement its BHP in accordance with: (1) the approved and full certified State BHP Blueprint; or (2) the approved suspension application (see ICR section 3 below).

We propose at § 600.145(f)(2) that the State operating a BHP must perform eligibility and health services appeals as specified in § 600.335.

The ongoing burden associated with the requirements under § 600.145 is the time and

effort it would take each participating State to perform the recordkeeping and reporting portions of the core operating functions of a BHP including eligibility determinations and appeals as well as enrollment and disenrollment, health plan contracting, oversight and financial integrity, consumer assistance, and if necessary program termination or suspension.

Because only two States are currently certified to operate a BHP, we are providing the burden estimate for two States. We estimate that it would take a business operations specialist 4 additional hours at \$80.08/hr to meet these new recordkeeping and reporting requirements for health services appeals. In aggregate, we estimate an increased burden of 8 hours (2 States x 4 hr/response) at a cost of \$641 (2 States x 4 hr x \$80.08/hr). We note that this cost will be incurred 100 percent by the State, as Federal BHP funds cannot be used for program administration.

We propose at § 600.330(f), BHP eligibility notices must be written in plain language and be provided in a manner which ensures individuals with disabilities are provided with effective communication and takes steps to provide meaningful access to eligible individuals with limited English proficiency. These notices must be developed and processed in a coordinated fashion with other insurance affordability programs which have the same accessibility standards at 45 CFR 155.230(b). As such, we propose no additional burden for the BHP for the noticing requirement.

(3) ICRs Regarding Suspension of a BHP (§§ 600.140(b) and 600.170(a)(2))

We propose at §600.140(b)(1) if a State decides to suspend its BHP or requests a suspension extension, a State must submit to the Secretary a suspension application or suspension extension application. We propose at § 600.140(b)(3) that a State must submit written notices to all BHP enrollees and participating standard health plan offers at least 90 days prior to the effective date of the suspension. We propose at § 600.140(b)(4) that the State must submit to HHS within 12 months of the suspension effective date the data required by § 600.610 needed to

complete the financial reconciliation process with HHS. We propose at § 600.140(b)(5) that the State must submit the annual report required by § 600.170(a)(2). We propose at § 600.140(b)(6) that the State must annually remit to HHS any interest that has accrued on the balance of the BHP trust fund during the suspension period. We propose at § 600.140(b)(7) that the State must submit a transition plan to HHS that describes how the State will reinstate its BHP or terminate the program.

Two States are currently certified to operate a BHP; therefore, we are providing the burden estimate for two States.

We estimate that, on average, it would take a Business Operations Specialist 30 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to submit a suspension application to the Secretary. In aggregate, we estimate a one-time burden of 68 hours (2 States x 34 hr/response) at a cost of \$5,780 [2 States x ((30 hr x \$80.08/hr) + (4 hr x \$118.14/hr))]. We estimate that, on average, it would take a Business Operations Specialist 30 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to submit a suspension extension application to the Secretary. In aggregate, we estimate a one-time burden of 68 hours (2 States x 34 hr/response) at a cost of \$5,780 [2 States x ((30 hr x \$80.08/hr) + (4 hr x \$118.14/hr))].

We estimate that, on average, it would take a Business Operations Specialist 32 hours at \$80.08/hr to prepare and submit notification to all participating standard health plans and enrollees. In aggregate, we estimate a one-time burden of 64 hours (2 States x 32 hr/response) at a cost of \$5,125 [2 States x (32 hr x \$80.08/hr)].

We estimate that it would take a Business Operations Specialist 25 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to compile and submit data required for quarterly financial reconciliation. In aggregate, we estimate an annual burden of 232 hours (2 States x 29 hr/response x 4 responses/yr) at a cost of \$19,796 [2 States x 4 responses/yr ((25 hr x \$80.08/hr) + (4 hr x \$118.14/hr))].

We estimate that, on average, it would take a Financial Specialist 8 hours at \$88.74/hr to remit annually the interest accrued on the balance of the BHP trust fund while in suspension. In aggregate, we estimate an annual burden of 16 hours (2 States x 8 hr/response) at a cost of \$1,420 [2 States x (8 hr x \$88.74/hr)].

We estimate that it would take a Business Operations Specialist 20 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to submit a transition plan to reinstate its BHP or terminate the program. In aggregate, we estimate a one-time burden of 48 hours (2 States x 24 hr/response) at a cost of \$4,148 [2 States x ((20 hr x \$80.08/hr) + (4 hr x \$118.14/hr))].

We estimate that, on average, it will take a Business Operations Specialist 40 hours at \$80.08/hr and 4 hours at \$118.14/hr for a General Manager to complete and submit the State’s annual report, for a total annual burden of 88 hours at a cost of \$7,352 [2 States x ((40 hr x \$80.08/hr) + (4 hr x \$118.14/hr))]. We note that these costs will be incurred 100 percent by the State, as Federal BHP funds cannot be used for program administration.

b. Burden Summary

TABLE 58: Summary of Proposed Burden Estimates

Regulation Section(s)/ ICR Provision	OMB Control No./ CMS-ID	Year	Number of Respondents	Number of Responses	Time per Response (hrs)	Total Time (hr)	Hourly Labor Rate (\$/hr)	Total Labor Cost (\$)	State Share (\$)	Total Beneficiary Cost (\$)
600.125(a)(1)	0938–1218 (CMS-10510)	2024	2	2	6	12	Varies	1,113	1,113	N/A
600.145(a) and 600.145(f)(2)	0938–1218 (CMS-10510)	2024	2	2	4	8	80.08	641	641	N/A

11. The Quality Payment Program (QPP) (42 CFR part 414 and section IV. of this proposed rule)

The following QPP-specific ICRs reflect changes to our currently approved burden due to proposed policy changes in this CY 2024 proposed rule as well as adjustments to the policies that have been previously finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, and 87 FR 70131, respectively) due to revised assumptions based on updated data available at the time of the publication of this proposed rule.

a. Background

(1) ICRs Associated with Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)

In the following sections, we discuss a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The following sections describe the changes in the estimated burden for the information collections relevant to the proposed revisions in the policies associated with the CY 2024 PFS proposed rule and the proposed revisions to our currently approved information requests for MIPS and Advanced APM ICRs. The proposed estimated burden will be submitted to OMB under control number 0938-1314 (CMS-10621). The proposed estimated burden for the CAHPS for MIPS Survey discussed in sections V.B.11.c.(5), V.B.11.e.(8), and V.B.11.e.(9) of this rule will be submitted under OMB control number 0938-1222 (CMS-10450). We note that we have received approvals for the collection of information associated the virtual group election process under OMB control number 0938-1343 (CMS-10652).

(2) Summary of Proposed Changes for the Quality Payment Program: MIPS

We have included the change in the estimated burden for the CY 2024 performance period/2026 MIPS payment year due to the proposed policies and information collections in this proposed rule. The proposed policies in this proposed rule impact the burden estimates for the CY 2024 performance period/2026 MIPS payment year.

The following five MIPS ICRs show changes in burden due to the proposed policies in this proposed rule: (1) Quality performance category data submission by Medicare Part B claims collection type; (2) Quality performance category data submission by qualified clinical data registry (QCDR) and MIPS CQM collection type; (3) Quality performance category data submission by eCQM collection type; (4) MIPS Value Pathways (MVP) quality performance category submission, and (5) MVP registration. In aggregate, we estimate the proposed policies will result in a net decrease in burden of 4,002 hours and \$459,553 for the CY 2024 performance period/2026 MIPS payment year. The remaining changes to our currently approved burden estimates are proposed adjustments due to the revised burden assumptions based on the updated

data available at the time of publication of this proposed rule. As discussed in section VII.E.23.a. of this proposed rule, we are basing our estimates on data from the CY 2021 performance period.

We are proposing to add two new ICRs, “QCDR full self-nomination process” and “qualified registry full self-nomination process” in sections V.B.11.c.(2) and V.B.11.c.(3) of this rule to distinctly capture the burden for the number of QCDRs and qualified registries submitting applications for the simplified and full self-nomination process. We note that the proposed addition of these ICRs is not due to the proposed policy changes in section IV.A.4.k. of this rule. It is a proposed change in our approach in representing the estimated burden for the third -party intermediary self-nomination process due to availability of updated data.

We are proposing to remove one ICR, “nomination of Promoting Interoperability measures,” in section V.B.11.h. of this rule. We note that the proposed removal of the ICR is not due to proposed policy changes in section IV.A.4.f.(4) of this rule. It is due to a consistent decline in the number of submissions received for the ICR.

We are not proposing any changes or adjustments to the following ICRs: Registration for virtual groups; OAuth credentialing and token request process; Quality Payment Program identity management application process; subgroups registration; submitting Promoting Interoperability data; improvement activities submission; nomination of MVPs; and opt-out of performance data display on Compare Tools for voluntary participants. See section V.B.11. of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted by two primary factors. First, we are unable to predict with absolute certainty who will be a Qualifying APM Participant (QP) for the CY 2024 performance period/2026 MIPS payment

year. New eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS reporting requirements and payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2024 performance period/2026 MIPS payment year compared to the CY 2021 performance period/2023 MIPS payment year. Therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data. Additionally, we will continue to update our estimates annually as data becomes available.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced APMs"), we did not implement any changes to currently approved burden estimates for the CY 2024 performance period/2026 MIPS payment year. Therefore, we did not propose any changes to the Partial QP elections; Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes; and submission of Data for QP determinations under the All-Payer Combination Option.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 59 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. In Table 59, MIPS eligible clinicians and other clinicians voluntarily submitting data to MIPS may submit data as individuals, groups, or virtual groups for

the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted. Beginning with the CY 2023 performance period/2025 MIPS payment year, clinicians could also participate as subgroups for reporting measures and activities in an MVP. We note that the subgroup reporting option is not available for clinicians participating in traditional MIPS. We finalized in the CY 2022 PFS final rule that a subgroup reporting measures and activities in an MVP will submit its affiliated group's data for the Promoting Interoperability performance category and in the scenario that a subgroup does not submit its affiliated group's data, the subgroup will receive a zero score for the Promoting Interoperability performance category (86 FR 65413 through 65414).

Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 59.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. We previously finalized in the CY 2021 PFS final rule that the APM Performance Pathway is available for both Accountable Care Organization (ACO) participants and non-ACO participants to submit quality data (85 FR 84859 through 84866). Due to data limitations and our inability to determine who will use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2024 performance period/2026 MIPS payment year, we assume ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. We also want to note that as finalized in the CY 2022 PFS final rule (86 FR

65259 through 65263), the CMS Web Interface collection type is available through the CY 2024 performance period/2026 MIPS payment year only for clinicians participating in the Shared Savings Program. Per section 1899(c) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. Additionally, we finalized the introduction of a voluntary reporting option for APM Entities to report the Promoting Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year (87 FR 70087 and 70088). For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 Quality Payment Program final rule, we established that, for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM Entity receives less than the maximum improvement activities performance category score, to date all MIPS APM Entities have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844).

TABLE 59: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician

Type of Data Submitted	Category of Clinician
Quality Performance Category	Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity. Subgroup reporting is only available for clinicians participating in MVP reporting.
Promoting Interoperability Performance Category	Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity. Each eligible clinician in an APM Entity could report data for the Promoting Interoperability performance category at the individual level, or as part of their group TIN, or under their APM Entity TIN. The burden estimates for this proposed rule assume group TIN-level reporting.
Improvement Activities Performance Category	Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity. The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.
Reweighting Applications for extreme and uncontrollable circumstances and significant hardship or other exceptions	Clinicians who submit an application may be eligible for a reweighting of the approved performance category to zero percent under specific circumstances as set forth in § 414.1380(c)(2), including, but not limited to, extreme and uncontrollable circumstances and significant hardship or another type of exception. Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category as described in § 414.1380(c)(2)(i)(A)(4).
MVP and Subgroup Registration	An MVP participant, as described at § 414.1305, electing to submit data for the measures and activities in an MVP must register. Clinicians who choose to participate as a subgroup for reporting an MVP must also register.
Partial QP Election	Eligible clinicians who attain Partial QP status and choose to participate in MIPS would need to submit a partial QP election form.
Registration for the CAHPS for MIPS Survey	Groups electing to use a CMS-approved survey vendor to administer the CAHPS for MIPS survey must register.
Virtual Group Registration	Virtual groups must register via email. Virtual group participation is limited to MIPS eligible clinicians,

Type of Data Submitted	Category of Clinician
	specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.
APM Performance Pathway	Clinicians in MIPS APMs electing the APM Performance Pathway. The burden estimates for this proposed rule assume that ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option (available through the CY 2024 performance period/2026 MIPS payment year), and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an APM Entity.

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, and 87 FR 70131), and continued in this proposed rule create some additional data collection requirements not listed in Table 59. These additional data collections, some of which are currently approved by OMB under the control numbers 0938-1314 (Quality Payment Program, CMS-10621) and 0938-1222 (CAHPS for MIPS, CMS-10450), are as follows:

Additional ICRs related to MIPS third-party intermediaries (see section V.B.11. c. of this proposed rule):

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938-1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938-1314)
- Third party intermediary plan audits
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).
- Open Authorization Credentialing and Token Request Process (OMB 0938-1314) (85 FR 84969 through 84970).

Additional ICRs related to the data submission and the quality performance category (see section V.B.11.e. of this proposed rule):

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938-1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938-1314).

Additional ICRs related to the Promoting Interoperability performance category (see section V.B.11.g. of this proposed rule):

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938-1314).

Additional ICRs related to call for new MIPS measures and activities (see sections V.B.11.j, V.B.11.f, V.B.11.k., and V.B.11.h. of this proposed rule):

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938-1314).
- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938-1314).
- Nomination of MVPs (85 FR 84990 through 84991) (OMB 0938-1314)

Additional ICRs related to MIPS (see section V.B.11.o. of this proposed rule):

- Opt out of performance data display on Compare Tools for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938-1314).

Additional ICRs related to APMs (see sections V.B.11.m. and V.B.11.n. of this proposed rule):

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938-1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938-1314).

- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938-1314).

- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938-1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule does not propose any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938-1343 (CMS-10652). Consequently, we are not proposing any changes under that control number.

c. ICRs Regarding Third Party Intermediaries (§ 414.1400)

The following proposed changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621). As discussed above in section V.B.11.a.(2) of this rule, we are proposing to add two new ICRs, “QCDR simplified self-nomination process” and “qualified registry self-nomination process”, to represent the estimated burden for the third -party intermediaries submitting applications for the simplified self-nomination process. We discuss the details of these proposed changes in the below sections.

In section IV.A.4.k. of this rule, we are proposing to: (1) add requirements for third party intermediaries to obtain documentation; (2) add requirements for third party intermediaries to submit data in the form and manner specified by CMS; (3) specify the use of a simplified self-nomination process for existing QCDRs and qualified registries; (4) add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (5) add a requirement for QCDRs and qualified registries to attest that information on the qualified posting is correct; (6) modify requirements for QCDRs and qualified registries to support MVP reporting; (7) specify requirements for a transition plan for QCDRs and qualified registries; (8) specify requirements for data validation execution reports; (9) eliminate the Health

IT vendor category; (10) add failure to maintain updated contact information as criteria for remedial action; (11) revise corrective action plan requirements; (12) specify the process for publicly posting remedial action; and (13) specify the criteria for audits. Specifically, we note that the proposed policy to eliminate the health IT vendor category beginning with the CY 2025 performance period/2027 MIPS payment year, if finalized, would not have any impact on the estimated burden for third party self-nomination process in the CY 2024 performance period/2026 MIPS payment year. If the proposed removal of health IT vendor category is finalized for the CY 2025 performance period/2027 MIPS payment year, we recognize that it could encourage some existing health IT vendors to complete the requirements under the qualified registry self-nomination process. However, we believe that many third-party intermediaries serve as both health IT vendors and qualified registries for the purposes of submitting data for MIPS eligible clinicians. Therefore, we assume that there would not be an increase in the number of qualified registries that would submit applications for the qualified registry self-nomination process during the CY 2024 performance period/2026 MIPS payment year.

We assume that the proposed changes to codify previously finalized preamble language related to third party intermediaries in the regulatory text would result in modifying the regulatory text to reflect previously finalized policies for third party intermediaries or provide additional clarification of the previously finalized policies. We do not expect to receive additional information from QCDRs and qualified registries during the self-nomination process due to the above proposed policies and therefore, we are not proposing any adjustments to the currently approved burden estimates for third party intermediaries. We refer readers to section IV.A.4.k. of this rule for details on proposed policies for third party intermediaries. Additionally, we refer readers to section VII.E.23.e.(2)(a) of this proposed rule where we discuss the details in our impact analysis for these policies.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.³³³ The processes for self-nomination of entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

As described below in section V.B.11.c.(2)(a) of this rule, we are proposing to separate the burden for the number of QCDR self-nomination applications submitted for the simplified and full self-nomination process for the CY 2024 performance period/2026 MIPS payment year. In the CY 2023 PFS final rule (87 FR 70137 through 70139), we used the same estimate for the number of respondents that submitted applications for the simplified and full self-nomination process because we did not have separate estimates at the time. Additionally, we only used the burden for the full QCDR self-nomination process in our final burden summary estimates. Due to the availability of updated data and the distinct number of estimated respondents for the simplified and full self-nomination process, we are proposing to add a new ICR to capture the burden for the simplified QCDR self-nomination process. We note that the proposed change in

³³³ As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

estimated burden is not due to policy proposals in section IV.A.4.k. of this rule. In order to accurately represent the estimated burden incurred by the QCDRs for the simplified and full self-nomination process, we discuss the burden under separate ICRs. We are not proposing any changes to our estimates for the number of existing or borrowed QCDR measures submitted for consideration by each QCDR at the time of self-nomination and the average time required to submit information for each QCDR measure.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77507 through 77508, and 82 FR 53906 through 53908, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59998 through 60000, 84 FR 63116 through 63121, 85 FR 84964 through 84969, 86 FR 65569 through 65573, and 87 FR 70138 through 70139, respectively) for our previously finalized requirements and estimated burden for self-nomination of QCDRs and nomination of QCDR measures.

(a) Self-Nomination Process and Other Requirements

Based on the number of applications that we expect to receive during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 45 QCDRs would submit applications using the simplified self-nomination process. We note that we are not making any changes to the currently approved time of 8.1 hours required for the simplified QCDR self-nomination process (87 FR 70139).

Based on the above assumptions, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians.

As shown in Table 60, we assume that the staff involved in the simplified QCDR self-nomination process will continue to be computer systems analysts or their equivalent who have an average adjusted labor rate of \$103.40/hr. We estimate the burden per response would be \$837.54 (8.1hr x \$103.40/hr). In aggregate, for the CY 2024 performance period/2026 MIPS

payment year, we estimate that the annual burden for the simplified QCDR self-nomination process would be 365 hours (45 responses x 8.1 hr) at a cost of \$37,689 (45 applications x \$837.54/application).

TABLE 60: Estimated Burden for Simplified QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Burden Estimate
# of Simplified QCDR Self-Nomination Applications submitted (a)	45
Annual Hours Per QCDR for Simplified Process (b)	8.1
Total Annual Hours for Self-nomination (c) = (a) * (b)	365
Cost per Application at Labor Cost for computer systems analysts at \$103.40/hr (d)	\$837.54
Total Annual Cost (e) = (a) * (d)	\$37,689

In Table 61, the addition of this new ICR for the CY 2024 performance period/2026 MIPS payment year would result in an increase of 365 hours at a cost of \$37,689 for the simplified QCDR self-nomination process. We note that the proposed increase in burden is due to separating the estimated burden for the simplified QCDR self-nomination process.

TABLE 61: Change in Estimated Burden for Simplified QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Time (hr) (a)	0
Total Annual Time (hr) for Respondents in CY 2024 PFS proposed rule (b) (See Table 60, row (c))	365
Difference (c) = (b) - (a)	+365
Total Currently Approved Annual Cost (d)	0
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 60, row (e))	\$37,689
Difference (f) = (e) - (d)	+\$37,689

(b) Full QCDR Self-Nomination Process and Other Requirements

Based on the number of applications that we expect to receive during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 10 QCDRs would submit applications using the full self-nomination process. This is a decrease of 53 respondents from the currently approved estimate of 63 for the QCDR self-

nomination process (87 FR 70139). We note that we are not making any changes to the currently approved time of 10.1 hours required for the full QCDR self-nomination process (87 FR 70139).

Based on the above assumptions, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians.

In Table 62, we assume that the staff involved in the full QCDR self-nomination process will continue to be computer systems analysts or their equivalent who have an average adjusted labor rate of \$103.40/hr. We estimate the burden per response would be \$1,044.34 (10.1hr x \$103.40/hr). In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the full QCDR self-nomination process would be 101 hours (10 responses x 10.1 hr) at a cost of \$10,443 (10 applications x \$1,044.34/application).

TABLE 62: Estimated Burden for Full QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Burden Estimate
# of Full QCDR Self-Nomination Applications submitted (a)	10
Annual Hours Per QCDR for Full Process (b)	10.1
Total Annual Hours for Full Self-nomination (c) = (a) * (b)	101
Cost per Application at Labor Cost computer systems analyst at \$103.40/hr (d)	\$1,044.34
Total Annual Cost (e) = (a) * (d)	\$10,443

In Table 63, we use the currently approved burden as the baseline for calculating the net change in burden for the full QCDR self-nomination process. We note that we discussed the estimated burden for the full QCDR self-nomination process under “maximum burden” in Table 105 in the CY 2023 PFS final rule (87 FR 70139). For the CY 2024 performance period/2026 MIPS payment year, the change in the representation of burden for this ICR described above results in a decrease of 535 hours and \$55,350 for the full self-nomination process. We also note that the decrease in burden accounts for the change due to separating the estimated burden based on the simplified and full self-nomination process.

TABLE 63: Change in Estimated Burden for Full QCDR Self-Nomination and QCDR Measure Submission

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Time (hr) (a)	636
Total Annual Time (hr) for Respondents in CY 2024 PFS proposed rule (b) (See Table 62, row (c))	101
Difference (c) = (b) - (a)	-535
Total Currently Approved Annual Cost (d)	\$65,793
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 62, row (e))	\$10,443
Difference (f) = (e) - (d)	-\$55,350

(c) QCDR Measure Requirements

In the CY 2017 Quality Payment Program final rule (81 FR 77375 through 77377), we established that QCDRs could submit measures that are not on the annual list of MIPS quality measures as part of the self-nomination process for an entity to become a QCDR.

In section IV. of this rule, we are proposing to add that if the measure was submitted for consideration after self-nomination to our list of reasons for rejecting a QCDR measure at § 414.1400(b)(4)(iv)(O). We will not revise or adjust our active requirements or burden estimates because the proposed policy only clarifies requirements for rejecting a QCDR measure and will not substantively change the currently approved estimated average weighted time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

In section IV. of this rule, we are proposing at § 414.1400(b)(4)(iv)(P) that a QCDR measure may be rejected if the QCDR submits more than 30 quality measures not in the annual list of MIPS quality measures for CMS consideration. We will not revise or adjust our currently approved burden estimates as result of this change because limiting the number of measures submitted during the QCDR self-nomination process would not substantively change the currently approved estimated average weighted time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

In section IV.A.4.k.(4)(b)(i) of this rule, we are proposing to revise § 414.1400(b)(4)(i)(B) to add a provision that the approved QCDR measure specifications must remain published through the performance period and data submission period. We will not revise or adjust our currently approved burden estimates as result of this change because establishing a standard for the duration of posting the approved QCDR measure specifications would not substantively change the currently approved estimated average weighted time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

(3) Qualified Registry Self-Nomination Process and Other Requirements

We refer readers to § 414.1400(b)(2) which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so.

As described below, in this rule we are proposing to separate the burden for the number of qualified registry self-nomination applications submitted for the simplified and full self-nomination process for the CY 2024 performance period/2026 MIPS payment year. In the CY 2023 PFS final rule (87 FR 70139 through 70140), we used the same estimate for the number of respondents that submitted applications for the simplified and full self-nomination process because we did not have separate estimates at the time. Additionally, we only used the burden for the full qualified registry self-nomination process in our final burden summary estimates. Due to the availability of updated data and the distinct number of estimated respondents for the simplified and full self-nomination process, we are proposing to add a new ICR to capture the burden for the qualified registry self-nomination process. We note that the proposed change is not due to policy proposals in section IV.A.4.k. of this rule. With the addition of a new ICR, we believe that we would be able to accurately represent the estimated burden incurred by the qualified registries for both the simplified and full self-nomination process.

(a) Simplified Qualified Registry Self-Nomination Process

Based on the number of applications that we expect to receive during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 89 qualified registries would submit applications using the simplified self-nomination process. We note that we are not making any changes to the currently approved time of 0.5 hours required for the simplified qualified registry self-nomination process (87 FR 70140).

Based on the above assumptions, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians.

In Table 64, we assume that the staff involved in the simplified qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average adjusted labor rate of \$103.40/hr. We estimate the burden per response would be \$51.70 (0.5hr x \$103.40/hr) for the simplified self-nomination process. In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the simplified qualified registry self-nomination process would be 45 hours (89 responses x 0.5 hr) at a cost of \$4,601 (89 applications x \$51.70//application).

TABLE 64: Estimated Burden for Simplified Qualified Registry Self-Nomination

Burden and Respondent Descriptions	Burden Estimate
# of Simplified Self-Nomination Applications submitted (a)	89
Annual Hours Per Qualified Registry for Simplified Process (b)	0.5
Total Annual Hours for Simplified Self-nomination (c) = (a) * (b)	45
Cost per Application at Labor Cost computer systems analyst at \$103.40/hr (d)	\$51.70
Total Annual Cost (e) = (a) * (d)	\$4,601

In Table 65, the addition of this ICR for the CY 2024 performance period/2026 MIPS payment year would result in a change of +45 hours at a cost of \$4,601 for the simplified qualified registry self-nomination process. We note the increase in burden is due to separating the estimated burden for the simplified and full qualified registry self-nomination process.

TABLE 65: Change in Estimated Burden for Simplified Qualified Registry Self-Nomination

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Time (hr) (a)	0
Total Annual Time (hr) for Respondents in CY 2024 PFS proposed rule (b) (See Table 64, row (c))	45
Difference (c) = (b) - (a)	+45
Total Currently Approved Annual Cost (d)	\$0
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 64, row (e))	\$4,653
Difference (f) = (e) - (d)	+\$4,653

(b) Full Qualified Registry Self-Nomination Process

Based on the number of applications we expect to receive during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate 36 qualified registries would submit applications using the full self-nomination process. This is a decrease of 96 from the currently approved estimate of 132 for the qualified registry self-nomination process (87 FR 70140). We note we are not making any changes to our currently approved per response time estimate of 0.5 hours for the simplified qualified registry self-nomination process and 2 hours for the full qualified registry self-nomination process (87 FR 70139 through 70140).

Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit data on MIPS eligible clinicians.

In Table 66, we assume the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr. We estimate the burden per response would be \$206.80 (2 x 103.40/hr) for the full self-nomination process. In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the full qualified registry self-nomination process would be 72 hours (36 responses x 2 hr) at a cost of \$7,445 (36 applications x \$206.80/application).

TABLE 66: Estimated Burden for Qualified Registry Full Self-Nomination

Burden and Respondent Descriptions	Burden Estimate
# of Qualified Registry Full Self-Nomination Applications submitted (a)	36
Annual Hours Per Qualified Registry for Full Process (b)	2
Total Annual Hours for Full Self-Nomination (c) = (a) * (b)	72
Cost per Application at Labor Cost (computer systems analyst’s labor rate of \$103.40/hr) (d)	\$206.80
Total Annual Cost (e) = (a) * (d)	\$7,445

In Table 67, we use the currently approved burden as the baseline for calculating the net change in burden for the simplified qualified registry self-nomination process. We note that we discussed the estimated burden for the full qualified registry self-nomination process under “maximum burden” in Table 107 in the CY 2023 PFS final rule (87 FR 70140). For the CY 2024 performance period/2026 MIPS payment year, the change in the representation of burden for this ICR described above results in a decrease of 192 hours and a decrease of \$19,853 for the full qualified registry self-nomination process. We note the decrease in burden accounts for the changes due to separating the estimated burden based on the simplified and full qualified registry self-nomination process.

TABLE 67: Change in Estimated Burden for Full Qualified Registry Self-Nomination

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Time (hr) (a)	264
Total Annual Time (hr) for Respondents in CY 2024 PFS proposed rule (b) (See Table 66, row (c))	72
Difference (c) = (b) - (a)	-192
Total Currently Approved Annual Cost (d)	\$27,298
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 66, row (e))	\$7,445
Difference (f) = (e) - (d)	-\$19,853

(4) Third Party Intermediary Plan Audits

The following proposed changes associated with developing the plans and audits by QCDRs and qualified registries will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

(a) Targeted Audits

In the CY 2022 PFS final rule (86 FR 65547 through 65548), we finalized that beginning with the CY 2021 performance period/CY 2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with requirements at § 414.1400(b)(3)(vi). Consistent with our assumptions in the CY 2022 PFS and CY 2023 PFS final rules for the QCDRs (86 FR 65574 and 87 FR 70141 respectively) and qualified registries (86 FR 65571 and 87 FR 70141 respectively) that would submit the results of targeted audits, we estimate the time required for a QCDR or qualified registry to submit a targeted audit ranges between 5 and 10 hours for the simplified and full self-nomination process, respectively. We assume the staff involved in submitting the targeted audits will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr.

Based on the number of data validation execution reports submitted for the CY 2021 performance period/2023 MIPS payment year, we estimate that 33 third party intermediaries (13 QCDRs and 20 qualified registries) will submit targeted audits for the CY 2024 performance period/2026 MIPS payment year (See Table 68). We estimate that the cost for a QCDR or a qualified registry to submit a targeted audit will range from \$517 (5 hr x \$103.40/hr) to \$1,034 (10 hr x \$103.40/hr). In aggregate, we estimate an annual burden ranging from 165 hours (33 responses × 5 hr/audit) and \$17,061 (33 targeted audits x \$517/audit) to 330 hours (33 responses × 10 hr/audit) and \$34,122 (33 targeted audits x \$1,034/audit) (see Table 69 for the cost per audit).

(b) Participation Plans

In the CY 2022 PFS final rule (86 FR 65546), we finalized requirements for approved QCDRs and qualified registries that did not submit performance data and therefore will need to submit a participation plan as part of their self-nomination process. We refer readers to

§ 414.1400(e) for additional details on policies for remedial action and termination of third-party intermediaries.

Consistent with our assumptions in the CY 2023 PFS final rule for the QCDRs and qualified registries (87 FR 70141) that will submit participation plans, we estimate that it will take 3 hours for a QCDR or qualified registry to submit a participation plan during the self-nomination process. We assume the staff involved in submitting a participation plan will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr.

As shown in Table 68, we are not changing our currently approved estimate that 75 third party intermediaries [five self-nomination participation plans (two QCDRs and three qualified registries) and 70 QCDR measure participation plans] will submit participation plans for the CY 2024 performance period/2026 MIPS payment year.

In Table 69, we estimate that the cost for a QCDR or a qualified registry to submit a participation plan is \$310.20 (3 hours x \$103.40/hr). In aggregate, we estimate the total impact associated with QCDRs and qualified registries to submit participation plans would be 225 hours (75 participation plans × 3 hr/plan) at a cost of \$23,265 (75 participation plans x \$310.20/plan) (see Table 69 for the cost per audit).

(c) Corrective Action Plans (CAPs)

In the CY 2017 Quality Payment Program final rule, we established the process for corrective action plans (CAPs) (81 FR 77386 through 77389). In section IV.A.4.k.(6)(b), we are proposing an additional provision at § 414.1400(e)(2)(iv) to allow us to immediately or with advance notice terminate a third party intermediary that has not maintained current contact information for correspondence. Additionally, we propose to add at § 414.1400(e)(2)(v) that we may terminate third party intermediaries that are on remedial action for two consecutive years. We are not proposing any changes to our currently approved estimated burden due to these

proposals because these changes provide additional rationale for remedial action policies and do not add any additional requirements for third party intermediaries.

Based on the increased number of QCDR and qualified registries that required remedial actions for the CY 2022 performance period/2024 MIPS payment year, we anticipate the same trend would continue for the CY 2024 performance period/2026 MIPS payment year. Therefore, we estimate 17 third party intermediaries will submit CAPs for the CY 2024 performance period/2026 MIPS payment year. This is an increase of seven respondents from the currently approved estimate of ten (87 FR 70142). We are not changing our currently approved estimate of 3 hours for a QCDR or qualified registry to submit a CAP. We also assume the staff involved in submitting the CAP will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr. As shown in Table 69, we estimate that the cost for a QCDR or a qualified registry to submit a CAP is \$310.20 (3 hours x \$103.40/hr). In aggregate, we estimate the total impact associated with QCDRs and qualified registries to CAPs will be 51 hours (17 CAPs × 3 hr/plan) at a cost of \$5,273 (17 CAPs x \$310.20/plan).

(d) Transition Plans

In the CY 2020 PFS final rule (84 FR 63052 through 63053), we established a policy at § 414.1400(a)(4)(vi) which states a condition of approval for the third party intermediary is to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. In this rule, we estimate we will receive five transition plans for the CY 2024 performance period/2026 MIPS payment year. This adjustment would result in a decrease of five from the currently approved estimate of 10 (87 FR 70142). We continue to estimate it will take approximately 1 hour for a computer system analyst or their equivalent at a

labor rate of \$103.40/hr to develop a transition plan on behalf of each QCDR or qualified registry during the self-nomination period. However, we are unable to estimate the burden for implementing the actions in the transition plan because the level of effort may vary for each QCDR or qualified registry. In aggregate, we estimate the impact associated with qualified registries completing transition plans is 5 hours (5 transition plans × 1 hr/plan) at a cost of \$517 (5 hr × \$103.40/hr). We refer readers to section VII.E.23.e.(2)(a) of this proposed rule where we discuss our impact analysis for the transition plans submitted by QCDRs and qualified registries.

In section IV.A.4.k.(6)(c) of this rule, we are proposing at § 414.1400(e)(1)(i)(F) an additional requirement for the QCDR or qualified registry under a corrective action plan to communicate the final resolution to CMS once the resolution is complete and to provide an update, if any, to the monitoring plan provided under § 414.1400(e)(1)(i)(C). We believe the proposed revision would ensure third party intermediaries complete the requirements within the communication plan and would not add any additional requirements for a third-party intermediary to submit a CAP.

In section IV.A.4.k.(6)(d) of this rule, we are proposing to add a new provision at § 414.1400(e)(1)(ii)(B) that we may publicly disclose on the CMS website that CMS took remedial action on the third party intermediary or terminated it. We are also proposing to modify §414.1400(e)(1)(ii) by redesignating it as § 414.1400(a)(2)(ii)(A) and ending the policy after the CY 2025 MIPS reporting period/CY 2027 MIPS payment year.

In section IV.A.4.k.(6)(e) of this rule, we are proposing to modify § 414.1400(a)(2)(ii)(A) to state that our consideration can include past compliance including remedial actions. We are proposing at § 414.1400(f) that third party intermediaries may be randomly selected for compliance evaluation or may be selected at the suggestion of CMS if there is an area of concern regarding the third party intermediary. We are also proposing to redesignate the existing section

§ 414.1400(f) (which includes paragraphs (f)(1), (2), and (3)) as paragraph (a)(3)(vii) with no changes in the text.

We do not expect to receive additional information from QCDRs and qualified registries during the self-nomination process due to the above proposed policies and therefore, are not proposing any adjustments to the currently approved burden estimates for third party intermediary plan audits. Additionally, we refer readers to section VII.E.23.e.(2)(a) of this proposed rule where we discuss the details in our impact analysis for these policies.

(e) Final Burden for Third Party Intermediary Plan Audits

In aggregate, as shown in Table 68, we assume that 130 third party intermediaries will submit plan audits (33 targeted audits, 75 participation plans, 17 CAPs, and 5 transition plans).

TABLE 68: Estimated Number of Respondents to Submit Plan Audits

Burden and Respondent Descriptions	# of Respondents
# of Targeted Audits (a)	33
# of Participation Plans (b)	75
# of Corrective Action Plans (CAPs) (c)	17
# of Transition Plans (d)	5
Total Respondents (e) = (a) + (b) + (c) + (d)	130

In Table 69, we assume that the staff involved in the submission of the plan audits during the third party intermediary self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr. For the CY 2024 performance period/2026 MIPS payment year, in aggregate, the proposed estimated annual burden for the submission of third party intermediary plan audits will range from 446 hours to 611 hours at a cost ranging from \$46,116 (446 hr x \$103.40 /hr) and \$63,177 (611 hr x \$103.40 /hr) (see Table 69).

TABLE 69: Estimated Burden for Third Party Intermediary Plan Audits

Burden and Respondent Descriptions	Simplified Process	Full Process
# of Hours per Completion of Targeted Audit (a)	5	10
Total Annual Hours for Completion of 33 Targeted Audits (b)	165	330
# of Hours per Submission of Participation Plan (c)	3	3
Total Annual Hours for Submission of 75 Participation Plans (d)	225	225
# of Hours per Submission of CAP (e)	3	3
Total Annual Hours for Submission of 17 CAPs (f)	51	51
# of Hours per Submission of Transition Plan (g)	1	1
Total Annual Hours for Submission of 5 Transition Plans (h)	5	5
Total Annual Hours for Submission of Plan Audits (i) = (b) + (d) + (f) + (h)	446	611
Cost Per Targeted Audit (@ computer systems analyst's labor rate of \$103.40/hr) (j) = (a) * \$103.40/hr	\$517	\$1,034
Cost Per Participation Plan (@ computer systems analyst's labor rate of \$103.40/hr) (k) = (c) * \$103.40/hr	\$310.20	\$310.20
Cost per CAP (@ computer systems analyst's labor rate of \$103.40/hr) (l) = (e) * \$103.40/hr	\$310.20	\$310.20
Cost per Transition Plan @computer systems analyst's labor rate of \$103.40/hr (m) = (g) * \$103.40/hr	\$103.40	\$103.40
Total Annual Cost (n) = 33 * (j) + 75 * (k) + 17 * (l) + 5 * (m) (simplified) and 33 * (j) + 75 * (k) + 17 * (l) + 5 * (m) (full)	\$46,116	\$63,177

In Table 70, for the CY 2024 performance period/2026 MIPS payment year, the change in the number of respondents for third party intermediary plan audits results in a change of +21 hours at a cost of +\$2,171 for the simplified self-nomination process and +26 hours at a cost of +\$2,688 for the full self-nomination process.

We note for the purposes of calculating proposed estimated change in burden in Tables 96 through 98 of this rule, we use only estimated burden for the plan audits submitted under the full self-nomination process.

TABLE 70: Change in Estimated Burden for Third Party Intermediary Plan Audits

Burden and Respondent Descriptions	Simplified Process	Full Process
Total Currently Approved Annual Hours (a)	425	585
Total Annual Hours for Respondents in CY 2023 PFS final rule (b) (See Table 69, row (i))	446	611
Difference (c) = (b) - (a)	+21	+26
Total Currently Approved Annual Cost (d)	\$43,945	\$60,489
Total Annual Cost for Respondents in CY 2023 PFS final rule (e) (See Table 69, row (n))	\$46,116	\$63,177
Difference (f) = (e) - (d)	+\$2,171	+\$2,688

(5) Survey Vendor Requirements

The following proposed changes associated with CAHPS survey vendors to submit data for eligible clinicians will be submitted to OMB for review under control number 0938-1222 (CMS-10450). We note that the associated burden will be made available for public review and comment under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to § 414.1400(d) for the requirements for CMS-approved survey vendors that may submit data on the CAHPS for MIPS Survey.

In this rule, we are adjusting the estimated number of vendors that will apply to participate as CAHPS for MIPS Survey vendors that were previously approved in the CY 2018 Quality Payment Program final rule (82 FR 53908). We estimate that we will receive approximately 10 survey vendor applications for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 5 survey vendor applications from our currently approved estimate of 15 vendors in the CY 2018 QPP final rule (82 FR 53908). As shown in Table 71, for the CY 2024 performance period/2026 MIPS payment year, we continue to estimate that the per response time is 10 hours. This will result in an estimated annual burden of 100 hours (10 survey vendor applications x 10 hr/application) at a cost of \$10,340 (10 applications x \$1,034/application)).

TABLE 71: Estimated Burden for Survey Vendor Requirements

Burden and Respondent Descriptions	Burden Estimate
# of Survey Vendor Applications (a)	10
# of Hours Per Computer Systems Analyst (b)	10
Total Annual Hours (c) = (a) * (b)	100
Cost to Submit a Survey Vendor Application (computer systems analyst @ \$103.40/hr) (d)	\$1,034
Total Annual Cost (e) = (a) * (d)	\$10,340

In Table 72, we illustrate the net change in estimated burden for survey vendor requirements using the currently approved burden in the CY 2018 QPP final rule (82 FR 53908).

In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents participating as CAHPS for MIPS Survey vendors would result in a total annual adjustment of -50 hours (-5 responses x 10 hr/application) at a cost of -\$5,170 (-5 x (10 hr x \$103.40/hr)) for the CY 2024 performance period/2026 MIPS payment year.

TABLE 72: Change in Estimated Burden for Survey Vendor Requirements

Burden and Respondent Descriptions	CY 2024 Performance Period
Total Currently Approved Annual Hours (a)	150
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 71, row (d))	100
Difference (c) = (b) - (a)	-50
Total Currently Approved Annual Cost (d)	\$15,510
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 71, row (i))	\$10,340
Difference (f) = (e) - (d)	-\$5,170

d. ICRs Regarding Open Authorization (OAuth) Credentialing and Token Request Process

This rule is not proposing any new or revised collection of information requirements or burden related to the OAuth credentialing and token request process. The requirements and burden for the OAuth credentialing and token request process are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the OAuth credentialing and token burden under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77502 through 77503 and 82 FR 53908 through 53912, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60000 through 60003, 84 FR 63121 through 63124, 85 FR 84970 through 84974, 86 FR 65576 through 65588, and 87 FR 70145 through 70154, respectively) for our previously finalized estimated burden associated with data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: those who submit data as MIPS eligible clinicians, and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the third snapshot date for the 2022 QP Performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2024 performance period/2026 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future for the CY 2024 performance period/2026 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). We note in this proposed rule, we are using the same CY 2021 performance period/2023 MIPS payment year submissions data used in the 2023 PFS Final Rule (87 FR 70145 through 70148).

We assume 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2021, CY 2022 and CY 2023 PFS final rules

(85 FR 84972, 86 FR 65567 and 87 FR 70145), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section V.B.11.a.(4) of this proposed rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2024 performance period/2026 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2021 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 performance period/2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2021 performance period/2023 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The associated burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this proposed rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.³³⁴

For the CY 2024 performance period/2026 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and

³³⁴ Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

log in and upload submission types. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, and eCQMs. Additionally, we capture the burden for clinicians who choose to submit via these collection types for the quality performance category of MVPs. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2021 performance period/2023 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 73 uses methods similar to those described above to estimate the number of MIPS eligible clinicians that will submit data as individual clinicians via each collection type in the CY 2024 performance period/2026 MIPS payment year. For the CY 2024 performance period/2026 MIPS payment year, we estimate approximately 14,402 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 11,197 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 17,944 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2021 performance period/2023 MIPS payment year, these are decreases of 334, 261, and 418 respondents from the currently approved estimates of 14,736, 11,458, and

18,362 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

TABLE 73: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

Burden and Respondent Description	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	Total
2024 MIPS performance period (excludes QPs) (a)	16,746	13,020	20,865	50,632
MVP Adjustment @ 14% (b) = (a)* 0.14	-2,344	-1,823	-2,921	-7,091
2024 MIPS Performance Period (excludes QPs and Adjusted for MVP) (c)= (a) – (b)	14,402	11,197	17,944	43,541
**Currently approved 2023 MIPS Performance Period (excludes QPs) (d)	14,736	11,458	18,362	44,556
Difference (e) = (c) – (d)	-334	-261	-418	-1,015

* We estimate 14 percent of clinicians will participate in MVP reporting as discussed in section V.11.e.(7) of this rule.

**Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 73 are not mutually exclusive.

Table 74 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2024 performance periods/2026 MIPS payment year. We assume clinicians who submitted quality data as groups in the CY 2021 performance period/2023 MIPS payment year will continue to submit quality data either as groups, or virtual groups for the same collection types for the 2024 performance period/2026 MIPS payment years. We used the same methodology described in the CY 2022 PFS final rule (86 FR 65577) on our assumptions related to the use of an alternate collection type

for groups that submitted data via the CMS Web Interface collection type for the CY 2021 performance period/2023 MIPS payment year.

As shown in Table 74, for the CY 2024 performance period/2026 MIPS payment year we estimate 6,312 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type and 5,402 groups and virtual groups will submit for eCQM collection types. These are decreases of 146 and 125 respondents from the currently approved estimates of 6,458, and 5,527 for the groups and virtual groups that will submit data using MIPS CQM and QCDR, and eCQM collection types, respectively.

As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities will participate through traditional MIPS and base our estimates on submissions received in the CY 2021 performance period/2023 MIPS payment year.

TABLE 74: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type

Burden and Respondent Description	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	Total
2024 MIPS performance period (excludes QPs) (a) prior to adjustments	0	7,339	6,281	13,620
Adjustment for MVPs (14%) (b) = (a) * 0.14	0	-1,027	-879	-1,906
2024 MIPS performance period (excludes QPs and) Adjusted for MVP). (c) = (a) – (b)	0	6,312	5,402	11,714
**Currently approved 2023 MIPS performance period (excludes QPs) (d)	0	6,458	5,527	11,985
Difference (e) = (d) - (c) - (d)	0	-146	-125	-271

* We estimate 12 percent of clinicians will participate in MVP reporting as discussed in section V.B.11.e.7. of this rule.

**Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

The burden associated with the submission of quality performance category data has some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their

practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their Electronic Health Record (EHR) implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. Additionally, as finalized in the CY 2022 PFS final rule (86 FR 65394 through 65397), group TINs could also choose to participate as subgroups for MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to the CY 2022 PFS final rule for additional details on MVP quality reporting requirements (86 FR 65411 through 65412).

In terms of the quality measures available for clinicians and groups to report for the CY 2024 performance period/2026 MIPS payment year, we propose a measure set of 200 quality measures. The new MIPS quality measures proposed for inclusion in MIPS for the CY 2024 performance period/2026 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 75, as well as counts of

new, removed, and substantively changed measures. There are no changes to the remaining measures not included in Appendix 1. We refer readers to Appendix 1: MIPS Quality Measures of this proposed rule for additional information.

TABLE 75: Summary of Quality Measures Proposed for the CY 2024 Performance Period/2026 MIPS Payment Year

Collection Type	# Measures Proposed as New	# Measures Proposed for Removal*	# Measures Proposed with a Substantive Change*	# Measures Proposed for CY 2024*
Medicare Part B Claims	0	-4	10	26
MIPS CQMs Specifications	+13	-11	51	174
eCQM Specifications	+1	-3	26	45
Survey – CSV	0	0	0	1
Administrative Claims	0	0	0	4
Total*	+14	-12**	59	200

*A measure may be specified under multiple collection types but will only be counted once in the total.

**We are proposing to remove 12 MIPS quality measures and partially remove 3 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs. NOTE: The 3 MIPS quality measures that are proposed for partial removal from traditional MIPS are not included in the total number of measures proposed for removal from MIPS starting with the CY 2024 performance period.

For the CY 2024 performance period/2026 MIPS payment year, we are proposing 200 measures, a net increase of 2 quality measures across all collection types compared to the currently approved estimate of 198 measures. Specifically, as discussed in section IV.A.4.f.(1)(e) of this rule, we are proposing to add 14 new MIPS quality measures, remove 12 MIPS quality measures, partially remove 3 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs, and make substantive updates to 59 MIPS quality measures. We do not anticipate our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures.

(3) Quality Payment Program Identity Management Application Process

This rule does not propose any new or revised collection of information requirements or burden related to the identity management application process. The identity management application process requirements and burden are currently approved by OMB under control

number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes for the identity management application process under that control number.

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

The following proposed changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

This rule does not propose any new or revised collection of information requirements or burden related to the submission of Medicare Part B claims data for the quality performance category. Our updated estimate for MVP participation due to policy changes to the MVP inventory as discussed in section IV.A.4.a. of this rule, impacts the number of clinicians submitting quality data for MIPS using the Medicare Part B Claims-based collection type. We refer readers to Table 79 of this section for the change in associated burden related to the submission of Medicare Part B claims data for the MVP quality performance category in the CY 2024 performance period/2026 MIPS payment year.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77501 through 77504 and 82 FR 53912, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60004 through 60005, 84 FR 63124 through 63126, 85 FR 84975 through 84976, 86 FR 65582 through 65584, and 87 FR 70149 through 70151 respectively) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 73, we estimate that 14,402 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type, a decrease of 334 from the currently approved estimate of 14,736 (87 FR 70150).

In Table 76, consistent with our currently approved per response time figures and using the updated wage rates in Table 54 of this proposed rule, we continue to estimate the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) at a

cost of \$15.51 (0.15 hr x \$103.40) for a computer systems analyst to 7.2 hours at a cost of \$744.48 (7.2 hr x \$103.40/hr). The burden also accounts for the effort needed to become familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time estimates and using the updated wage rates in Table 54 of this proposed rule, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours for a medical and health services manager at \$123.06/hr, 1 hour for a physician at \$274.44/hr, 1 hour for an LPN at \$53.72/hr, 1 hour for a computer systems analyst at \$103.40/hr, and 1 hour for a billing and posting clerk at \$43.08/hr.

In Table 76, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In aggregate, the total annual time for the CY 2024 performance period/2026 MIPS payment year ranges from 102,974 hours (7.15 hr x 14,402 clinicians) to 204,508 hours (14.2 hr x 14,402 clinicians). The total annual cost for the CY 2024 performance period/2026 MIPS payment year ranges from a minimum of \$12,376,071 to a maximum of \$22,874,697.

TABLE 76: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

Burden and Respondent Descriptions	Minimum Burden	Median Burden	Maximum Burden
# of Clinicians (a)	14,402	14,402	14,402
Hours Per Computer Systems Analyst to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Medical and Health Services Manager Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2
Total Annual Hours (i) = (a) * (h)	102,974	115,936	204,508
Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$103.40/hr @ varying times) (j)	\$15.51	\$108.57	\$744.48
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$123.06/hr @ 3 hr) (k)	\$369.18	\$369.18	\$369.18
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$103.40/hr @ 1 hr) (l)	\$103.40	\$103.40	\$103.40
Cost to Review Measure Specifications (@ LPN's labor rate of \$53.72/hr @1 hr) (m)	\$53.72	\$53.72	\$53.72
Cost to Review Measure Specifications (@ billing clerk's labor rate of \$43.08/hr @ 1 hr) (n)	\$43.08	\$43.08	\$43.08
Cost to Review Measure Specifications (@ physician's labor rate of \$274.44/hr @ 1 hr) (o)	\$274.44	\$274.44	\$274.44
*Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	\$859.33	\$952.39	\$1,588.30
*Total Annual Cost (q) = (a) * (p)	\$12,376,071	\$13,716,321	\$22,874,697

In Table 77, we used the currently approved burden as the baseline to calculate the net burden for the quality data submissions from clinicians using the Medicare Part B Claims-based collection type. In aggregate, using our currently approved per response time estimates, the decrease in number of responses from 14,736 to 14,402 (-334) results in a total maximum adjustment of -4,743 hours (-334 responses x 14.2 hr/response) at a cost of -\$530,492 (-334

response x \$1,588.30/response). For purposes of calculating total burden associated with this proposed rule as shown in Tables 99 through 101, only the maximum burden is used.

TABLE 77: Burden Adjustments for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	209,251
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (see Table 76, row (i))	204,508
Difference (c) = (b) - (a)	-4,743
Total Currently Approved Annual Cost (d)	\$23,405,189
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (see Table 76, row (q))	\$22,874,697
Difference (f) = (d) - (e)	-530,492

(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following proposed changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77504 through 77505 and 82 FR 53912 through 53914, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60005 through 60006, 84 FR 63127 through 63128, 85 FR 84977 through 84979, 86 FR 65584 through 65586, and 87 FR 70151 through 70153, respectively) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. We refer readers to Table 74 for the estimated change in associated burden for quality data submission using MIPS CQM and QCDR collection types related to MVP and subgroup reporting in the CY 2024 performance period/2026 MIPS payment year.

As noted in Tables 73 and 74, based on data from the CY 2021 performance period/2023 MIPS payment year, for the CY 2024 performance period/2026 MIPS payment year, we assume

that 17,509 clinicians (11,197 individuals and 6,312 groups and virtual groups) will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. This is a decrease of 407 clinicians from the currently approved estimate of 17,916 clinicians provided in the CY 2023 PFS final rule (87 FR 70152). Given the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe the burden for an individual clinician or group to review measure specifications and submit quality data is a total of 9 hours at a cost of \$1,039.54 per response. This consists of 3 hours at \$103.40/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$123.06/hr for a medical and health services manager, 1 hour at \$103.40/hr for a computer systems analyst, 1 hour at \$53.72/hr for a LPN, 1 hour at \$43.08/hr for a billing clerk, and 1 hour at \$274.44/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes

(0.083 hr) at \$103.40/hr for a computer systems analyst at a cost of \$8.15 (0.083 hr x \$103.40/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of \$1,039.54/response [(3 hr x \$103.40/hr) + (2 hr x \$123.06/hr) + (1 hr x \$274.44/hr) + (1 hr x \$103.40/hr) + (1 hr x \$53.72/hr) + (1 hr x \$43.08/hr) + (0.083 hr x \$103.40/hr)].

In Table 78, for the CY 2024 performance period/2026 MIPS payment year, in aggregate, we estimate a burden of 159,034 hours [9.083 hr/response x 17,509 responses] at a cost of \$18,201,306 (17,509 responses x \$1,039.54/response).

TABLE 78: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	Burden Estimate
# of clinicians submitting as individuals (a)	11,197
# of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)	6,312

Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$103.40/hr) (s)	\$8.58
Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	\$1,039.54
Total Annual Cost (u) = (c) * (t)	\$18,201,306

In Table 79, we calculated the net change in estimated burden for quality performance category submissions using the MIPS CQM and QCDR collection type by using the currently approved burden in the CY 2023 PFS final rule (87 FR 70151 through 70153). In aggregate, using the unchanged currently approved time per response estimate, the decrease of 407 respondents from 17,916 to 17,509 for the CY 2024 performance period/2026 MIPS payment year results in a decrease of 3,697 hours (-407 responses x 9.083 hr/response) at a cost of - \$423,093 (-407 responses x \$1,039.54/response).

TABLE 79: Burden Adjustments for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	162,731
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (see Table 78, row (l))	159,034
Difference (c) = (b) - (a)	-3,697
Total Currently Approved Annual Cost (d)	\$18,624,399
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (see Table 78, row (u))	\$18,201,306
Difference (f) = (e) - (d)	-423,093

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following proposed changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77505 through 77506 and 82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130), CY 2021 PFS final rule (85 FR 84979 through 84980), the CY 2022 PFS final rule (86 FR 65586 through 65588), and the CY 2023 PFS final rule (87 FR 70153 through 70154) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions

introducing MVP and subgroup reporting beginning in the CY 2024 performance period/2026 MIPS payment year, we refer readers to Table 84.

Based on updated data from the CY 2022 performance period/2024 MIPS payment year data, we assume that 23,346 clinicians will submit quality data using the eCQM collection type for the CY 2024 performance period/2026 MIPS payment year. This is a decrease of 543 clinicians from the estimate of 23,889 clinicians provided in the CY 2023 PFS final rule (87 FR 70153). We assume the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their certified EHR technology (CEHRT) and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at \$103.40/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$123.06/hr for a

medical and health services manager, 1 hour at \$274.44/hr for a physician, 1 hour at \$103.40/hr for a computer systems analyst, 1 hour at \$53.72/hr for an LPN, and 1 hour at \$43.08/hr for a billing clerk. Overall, we estimate a cost of \$927.56/response [(2 hr x \$103.40/hr) + (2 hr x \$123.06/hr) + (1 hr x \$274.44/hr) + (1 hr x \$103.40/hr) + (1 hr x \$53.72/hr) + (1 hr x \$43.08/hr)].

In Table 80, for the CY 2024 performance period/2026 MIPS payment year, in aggregate, we estimate a burden of 186,768 hours [8 hr x 23,346 responses] at a cost of \$21,654,816 (23,346 responses x \$927.56/response).

TABLE 80: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	Burden Estimate
# of clinicians submitting as individuals (a)	17,944
# of Groups submitting via EHR on behalf of individual clinicians (b)	5,402
Total # of Respondents (c)=(a)+(b)	23,346
Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)	2
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Physicians Review Measure Specifications (i)	1
Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)	8
Total Annual Hours (k) = (c) * (j)	186,768
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$103.40/hr) (l)	\$206.80
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$123.06/hr) (m)	\$246.12
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$103.40/hr) (n)	\$103.40
Cost to Review Measure Specifications (@ LPN's labor rate of \$53.72/hr) (o)	\$53.72
Cost to Review Measure Specifications (@ clerk's labor rate of \$43.08/hr) (p)	\$43.08
Cost to Review Measure Specifications (@ physician's labor rate of \$274.44/hr) (q)	\$274.44
Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	\$927.56
Total Annual Cost (s) = (c) * (r)	\$21,654,816

In Table 81, we illustrate the net change in burden for submissions in the quality performance category using the eCQM collection type from the currently approved burden in the CY 2023 PFS final rule (87 FR 70153 through 70154). In aggregate, using our currently approved time per response burden estimate, the decrease of 543 respondents from 23,889 to 23,347 for the CY 2024 performance period/2026 MIPS payment year results in a decrease of

4,344 hours (-543 responses x 8 hr/response) at a cost of -\$503,665 (-543 responses x \$927.56/response).

TABLE 81: Burden Adjustments for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

Burden and Respondent Descriptions	Burden Estimate

Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (see Table 80, row (k))	186,768
Difference (c) = (b) - (a)	-4,344
Total Currently Approved Annual Cost (d)	\$22,158,481
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (see Table 80, row (s))	\$21,654,816
Difference (f) = (e) - (d)	-\$503,665

(7) ICRs Regarding Burden for MVP Reporting

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

(a) Burden for MVP Reporting Requirements

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022 and CY 2023 PFS final rules for our previously finalized burden assumptions and requirements for submission data for the MVP performance category, and for the estimated number of clinicians participating as subgroups in the CY 2023 performance period/2025 MIPS payment year (86 FR 65590 through 65592 and 87 FR 70155).

In section IV.A.4.b. of this rule, we are proposing to add five new MVPs to the MVP Inventory. Additionally, we are proposing to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care MVP. Therefore, MVP participants will have a total of sixteen MVPs available for the CY 2024 performance period/2026 MIPS payment

year. Due to the availability of new MVPs, we expect an increase in the projected number of MVP participants. For each newly proposed MVP, we calculated the average quality measure submission rate across the measures available in each MVP for the CY 2021 performance period/2023 MIPS payment year. The total of these average quality measure submissions for each MVP was equivalent to about 2 percent of total quality measure submissions in the CY 2021 performance period/2023 MIPS payment year. We assume there would not be any changes to MVP submissions due to the proposed consolidation of the measures in the Promoting Wellness and Optimizing Chronic Disease Management MVPs into a Value in Primary Care MVP, discussed in section IV.A.4.b. of this rule. That is, we assume clinicians who would have submitted the Optimizing Chronic Disease Management MVP or the Promoting Wellness MVP would instead submit the Value in Primary Care MVP. Therefore, we estimate that 14 percent of the clinicians will participate in MVP reporting in the CY 2024 performance period/2026 MIPS payment year. This is an increase of 2 percentage points from the currently approved estimate of 12 percent in the CY 2023 PFS final rule (87 FR 70155). We refer readers to Appendix 3: MVP Inventory of this proposed rule for additional details on the MVPs proposed for the CY 2024 performance period/2026 MIPS payment year.

We assume the changes to the existing MVPs and the addition of new MVPs will not impact the currently approved number of subgroups. We expect clinician participation in subgroups will be relatively low for the CY 2024 performance period/2026 MIPS payment year due the voluntary subgroup reporting option and the additional burden involved for groups to organize clinicians into subgroups. Therefore, we did not make any adjustments to our previously finalized assumption in the CY 2023 PFS final rule (87 FR 70155) of 20 subgroups that will participate in MVP reporting.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

We refer readers to the CY 2023 PFS final rule (87 FR 70155 through 70156) for our previously finalized burden relevant to MVP registration for clinicians participating as an individual and/or group for MVP reporting.

As previously discussed, we estimate that approximately 14 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. For the CY 2024 performance period/2026 MIPS payment year, we assume that the total number of individual clinicians, groups, subgroups and APM Entities that will complete the MVP registration process is 9,015. In Table 82, we estimate that it will take 2,254 hours (9,015 responses x 0.25 hr/response) at a cost of \$233,038 (9,015 registrations x \$25.85/registration) for individual clinicians, groups and APM Entities to register for MVPs in the CY 2024 performance period/2026 MIPS payment year.

**TABLE 82: Estimated Burden for MVP Registration
(Individual clinicians, Groups, Subgroups and APM Entities)**

Burden and Respondent Descriptions	Burden Estimate
Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a)	9,015
Estimated Time Per Registration (hr) (b)	0.25
Estimated Total Annual Time (hr) for MVP Registration (c) = (a) * (b)	2,254
Computer systems analyst’s labor rate (\$/hr). (d)	103.40
Estimated Cost Per Registration (e) = (d) * (b)	25.85
Estimated Total Annual Cost for MVP Registration (f) = (a) * (e)	\$233,038

In Table 83, we illustrate the net change in burden for MVP registration using the currently approved burden in the CY 2023 PFS final rule (87 FR 70155 through 70156). In aggregate, for the CY 2024 performance period/2026 MIPS payment year, the adjustment in the number of respondents expected to register for MVP reporting from 7,731 to 9,015 results in an increase of 1,284 responses. In aggregate, when combined with the currently approved per response time estimate, this will result in an increase of 321 hours (2,254 hours – 1,933 hours) at a cost of \$33,192 (\$233,038 – \$199,846).

TABLE 83: Burden Adjustment for MVP Registration: Individuals, Groups, and APM Entities

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours (a)	1,933
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 82, row (c))	2,254
Difference (c) = (b) - (a)	321
Total Currently Approved Annual Cost (d)	\$199,846
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 82, row (e))	\$233,038
Difference (f) = (e) - (d)	\$33,192

(ii) Burden for Subgroup Registration

We are not proposing any changes to our previously finalized subgroup registration burden. We note that the proposed subgroup policies in section IV.A.4.d. of this rule do not impact the currently approved burden for subgroup registration. We discuss in detail below, the proposed policies and our reasons for not changing the currently approved burden for subgroup registration. The burden relevant to the subgroup registration requirement is currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes pertaining to subgroup registration under that control number.

In section IV.A.4.d.(2) of this rule, we are proposing to modify § 414.1365(e)(2)(ii) to read that, an MVP Participant that is a subgroup will receive the same reweighting that is applied to its affiliated group, but that for the CY 2023 MIPS performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the circumstances independent of the affiliated group as described in § 414.1365(e)(2)(ii)(A) and (B). We believe that the proposed modification to the subgroup reweighting policy would not impact the currently approved burden for subgroup registration because it would not change any requirements related to subgroup registration.

In section IV.A.4.d.(3) of this rule, we are proposing to modify the text at § 414.1365(e)(3) to read that if an MVP Participant, that is not an APM Entity or a subgroup, is

eligible for facility-based scoring, a facility-based score will also be calculated in accordance with § 414.1380(e). Additionally, we are proposing to add § 414.1365(e)(4)(i) to read that for subgroups, the affiliated group's complex patient bonus will be added to the final score. The proposed revisions would not impact the currently approved burden for subgroup registration since these changes only modify the regulatory text relevant to subgroup scoring policies.

In section IV.A.4.d.(4) of this rule, we are proposing to modify § 414.1385(a)(1) to read that a MIPS eligible clinician, subgroup, or group (including their designated support staff), or a third-party intermediary as defined at § 414.1305, may submit a request for a targeted review. The proposed change would not impact the currently approved burden for subgroup registration since the addition of subgroups to the targeted review language only modifies the regulatory text relevant to the targeted review process and does not change the subgroup registration requirements. We finalized in the CY 2017 Quality Payment Program final rule that a MIPS eligible clinician or group may request a targeted review of the calculation of the MIPS payment adjustment factor under section 1848(q)(6)(A) of the Act and, as applicable, the calculation of the additional MIPS payment adjustment factor under section 1848(q)(6)(C) of the Act (collectively referred to as the MIPS payment adjustment factors) applicable to such MIPS eligible clinician or group for a year (81 FR 77546). We note that information collection requirements, such as targeted reviews, that are imposed after an administrative action are not subject to the PRA under 5 CFR 1320.4(a)(2). Therefore, we are not making any adjustments to the currently approved subgroup registration burden because of the proposal to add subgroups to the targeted review regulation text.

(iii) Burden for MVP Quality Performance Category Submission.

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we previously finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i). As discussed in section V.B.11.e. of this rule, we did not propose new requirements to submit data

for the quality performance category of MVPs. Therefore, we did not propose any changes to our currently approved per response time estimates for submitting the MVP quality performance category data.

As described in section V.B.11.e.(7)(a) of this proposed rule, we estimate that 14 percent of the clinicians who participated in MIPS for the CY 2021 performance period/2023 MIPS payment year will submit data for the quality performance category of MVP in the CY 2024 performance period/2026 MIPS payment year. We also estimate there will be 20 subgroup reporters in the CY 2024 performance period/2026 MIPS payment year. In Table 84, we estimate that 3,801 clinicians and 10 subgroups will submit data using eCQMs collection type at \$614.45/response (see line q for eCQMs); 2,850 clinicians and 10 subgroups will submit data using MIPS CQM and QCDR collection type at \$683.73/response (see line q for CQM and QCDRs); and 2,344 clinicians and 0 subgroups will submit data for the MVP quality performance category using the Medicare Part B claims collection type at \$1,055.70/response (see line q for claims). For the CY 2024 performance period/2026 MIPS payment year, using our currently approved per response time estimates for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 20,198 hours [5.3 hr x 3,811 (3,801 +10) responses] at a cost of \$2,341,669 (3,811 responses x \$614.45/response) for the eCQM collection type, 17,074 hours [5.97 hr x 2,860 (2,443 +10)] at a cost of \$1,955,468 (2,860 responses x \$683.73/responses) for the MIPS CQM and QCDR collection type, and 18,974 hours (9.44 hr x 2,344 clinician responses) at a cost of \$2,474,561 (2,344 responses x \$1,055.70/response) for the Medicare Part B claims collection type.

TABLE 84: Estimated Burden for MVP Quality Performance Category Submission

Burden and Respondent Descriptions	eCQM Collection Type	CQM and QCDR Collection Type	Claims Collection Type
# of Submissions from pre-existing collection types (a)	3,801	2,850	2,344
# of Subgroup reporters (b)	10	10	0
Total MVP participants (c) = (a) + (b)	3,811	2,860	2,344
Hours Per Computer Systems Analyst to Submit Quality Data (d)	1.33	2	4.8
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	1.33	1.33	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	0.66	0.66	0.66

Cost to Review Measure Specifications (@ billing clerk's labor rate of \$43.08/hr) (o)	\$28.43	\$28.43	\$28.43
Cost to Review Measure Specifications (@ physician's labor rate of \$274.44/hr) (p)	\$181.13	\$181.13	\$181.13
*Total Annual Cost Per Submission (q) = (k) + (l) + (m) + (n) + (o) + (p)	\$614.45	\$683.73	\$1,055.70
*Total Annual Cost (r) = (c) * (q)	\$2,341,669	\$1,955,468	\$2,474,561

Table 85 illustrates the proposed changes in estimated burden for clinicians who will submit the MVP quality performance category utilizing the eCQM, MIPS CQM and QCDR, and claims collection types in the CY 2024 performance period/2026 MIPS payment year. We note we used the currently approved burden in the CY 2023 PFS final rule (87 FR 70157 through 70159) as the baseline to determine the net change in burden. In aggregate, when combined with our currently approved per response time estimate, the increase in 1,284 respondents who will submit data for the MVP quality performance category will result in an increase of 2,878 hours and \$333,633 for the eCQM collection type, an increase of 2,430 hours and \$278,273 for the

CQM and QCDR collection type, and an increase of 3,153 hours and \$352,599 for the claims collection type.

TABLE 85: Burden Adjustments for MVP Quality Performance Category Submission

Burden and Respondent Descriptions	eCQM Collection Type	CQM and QCDR Collection Type	Claims Collection Type
Total Currently Approved Annual Hours (a)	17,320	14,644	18,974
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 84, row (k))	20,198	17,074	22,127
Difference (c) = (b) - (a)	2,878	2,430	3,153
Total Currently Approved Annual Cost (d)	\$2,008,036	\$1,677,195	\$2,121,962
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 84, row (r))	\$2,341,669	\$1,955,468	\$2,474,561
Difference (f) = (e) - (d)	\$333,633	\$278,273	\$352,599

(8) Beneficiary Responses to CAHPS for MIPS Survey

The following proposed changes associated with CAHPS survey vendors to submit data for eligible clinicians will be submitted to OMB for review under control number 0938-1222 (CMS-10450). We note that the associated burden will be made available for public review and comment under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to the CY 2021 Quality Payment Program final rule (85 FR 84982 through 84983) for our previously finalized estimated burden associated with beneficiary responses to the CAHPS for MIPS Survey.

In section IV.A.4.f.(1)(c)(ii) of this proposed rule, we are proposing to require Spanish language administration of the CAHPS for MIPS Survey. Specifically, we are proposing to require organizations to contract with a CMS-approved survey vendor that, in addition to administering the survey in English, will administer the Spanish survey translation to Spanish-prefering patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines. For requirements and burden, we estimate an average administration time of 13.1 minutes (or 0.2183 hr) at a pace of 4.5 items per minute for the English version of the survey.

For the Spanish version, we estimate an average administration time of 15.7 minutes (assuming 20 percent more words in the Spanish translation). However, since less than 1 percent of surveys were administered in Spanish for the CY 2022 performance period, we are not updating our burden estimates to include the time associated with the Spanish version at this time.

In this rule, we are adjusting the estimated number of beneficiaries that will respond to the CAHPS for MIPS survey from the previously approved number of beneficiaries in the CY 2021 PFS final rule (85 FR 84982 through 84983). For the CY 2024 performance period/2026 MIPS payment year, we are estimating that 100 groups will elect to report on the CAHPS for MIPS survey. Based on the number of complete and partially complete surveys for groups participating in CAHPS for MIPS survey administration for the CY 2022 performance period/2024 MIPS payment year, we estimate that an average of 255 beneficiaries will respond per group for the CY 2024 performance period/2026 MIPS payment year. Therefore, we estimate that the CAHPS for MIPS survey will be administered to approximately 25,500 beneficiaries for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 4,452 beneficiary respondents from our currently approved estimate of 29,952 beneficiary respondents in the CY 2021 PFS final rule (85 FR 84982). As shown in Table 86, for the CY 2024 performance period/2026 MIPS payment year, we continue to estimate that the per response time to administer the survey is 0.2183 hours. This will result in an estimated annual burden of 5,567 hours at a cost of \$165,750.

TABLE 86: Estimated Burden for Beneficiary Response Requirements

Burden and Respondent Descriptions	Burden Estimate
# of Groups Practices Administering CAHPS for MIPS Survey (a)	100
# of Beneficiaries Per Group Responding to Survey (b)	255
# of Total Beneficiaries Reporting (c)=(a)*(b)	25,500
# of Hours Per Beneficiary Respondent (d)	0.2183
Total Annual Hours (e) = (c) * (d)	5,567
Cost for Beneficiary to Respond to CAHPS for MIPS Survey @ labor rate of \$29.76/hr (f) = (d) *\$29.76/hr	\$6.50
Total Annual Cost (g) = (e) * (f)	\$165,750

In Table 87, we illustrate the net change in estimated burden for beneficiary response requirements using the currently approved burden in the CY 2021 PFS final rule (85 FR 84982 through 84983). In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents submitting responses for the CAHPS for MIPS survey results in a total annual adjustment of -972 hours at a cost of -\$28,938 for the CY 2024 performance period/2026 MIPS payment year.

TABLE 87: Change in Estimated Burden for Beneficiary Response Requirements

Burden and Respondent Descriptions	CY 2024 Performance Period
Total Currently Approved Annual Hours (a)	6,539
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 81, row (e))	5,567
Difference (c) = (b) - (a)	-972
Total Currently Approved Annual Cost (d)	\$194,688
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 81, row (g))	\$165,750
Difference (f) = (e) - (d)	-\$28,938

(9) Group Registration for CAHPS for MIPS Survey

The following proposed changes will be submitted to OMB for review under control number 0938-1222 (CMS-10450). We note that the associated burden will be made available for public review and comment under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to CY 2019 PFS final rule (83 FR 60009 through 60010) for the previously approved requirements and burden for group registration for the CAHPS for MIPS Survey.

In this rule, we are adjusting the estimated number of groups registering for the CAHPS for MIPS Survey that were previously approved in the CY 2019 PFS final rule (83 FR 60009 through 60010) based on updated data from the CY 2022 performance period/2024 MIPS payment year. We estimate that 266 groups will register for the CAHPS for MIPS Survey for the

CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 16 group registrations from our currently approved estimate of 282 groups in the CY 2019 PFS final rule (83 FR 60010). In Table 88, for the CY 2024 performance period/2026 MIPS payment year, we continue to estimate that the per response time is 0.75 hours. This will result in an estimated annual burden of 200 hours (266 groups x 0.75 hr/registration) at a cost of \$20,628 (266 registrations x \$77.55/registration) for a computer systems analyst).

TABLE 88: Estimated Burden for Group Registration for the CAHPS for MIPS Survey

Burden and Respondent Descriptions	Burden Estimate
# of Groups Registering for the CAHPS for MIPS Survey (a)	266
# of Hours Per Computer Systems Analyst (b)	0.75
Total Annual Hours (c) = (a) * (b)	200
Cost to Register a Group for the CAHPS for MIPS Survey (@ computer systems analyst @ \$103.40/hr) (d) = (b) * \$103.40/hr	\$77.55
Total Annual Cost (e) = (c) * (d)	\$20,628

In Table 89, we illustrate the net change in estimated burden for groups registering for the CAHPS for MIPS Survey using the currently approved burden in the CY 2019 PFS final rule (83 FR 60009 through 60010). In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents registering for the CAHPS for MIPS Survey from 282 to 266 results in a total annual adjustment of -12 hours (-16 responses x 0.75 hr/nomination) at a cost of -\$1,241 for the CY 2024 performance period/2026 MIPS payment year.

TABLE 89: Change in Estimated Burden for Group Registration for the CAHPS for MIPS Survey

Burden and Respondent Descriptions	CY 2024 Performance Period
Total Currently Approved Annual Hours (a)	212
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 88, row (c))	200
Difference (c) = (b) - (a)	-12
Total Currently Approved Annual Cost (d)	\$21,869
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 88, row (i))	\$20,628
Difference (f) = (e) - (d)	-\$1,241

f. ICRs Regarding the Call for MIPS Quality Measures

The following proposed changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

This rule does not propose any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, based on the actual number of quality measure submissions received for CMS consideration during the 2023 Annual Call for Quality Measures, we are adjusting our burden estimates for the CY 2024 performance period/2026 MIPS payment year.

In this rule, we estimate we will receive 31 quality measure submissions during the 2023 Annual Call for Quality Measures, an increase of 2 from the currently approved number of quality measure submissions for consideration (87 FR 70159 through 70160). We are not proposing any changes to the 5.5 hour (2.4 hr for practice administrator + 3.1 hr for clinician) per response time estimate for quality measure submissions.

In Table 90, we estimate an annual burden of 171 hours (31 measure submissions × 5.5 hr/measure) at a cost of \$35,529 (31 measure submissions x \$1,146.11/submission for the CY 2024 performance period/2026 MIPS payment year).

TABLE 90: Estimated Burden for Call for Quality Measures

Burden and Respondent Descriptions	Burden estimate
# of New Quality Measures Submitted for Consideration (a)	31
# of Hours per Practice Administrator to Identify, Propose and Link Measure (b)	2.4
# of Hours per Clinician to Identify and Link Measure (c)	1.1
# of Hours per Clinician to Complete Peer Review Article Form (d)	2
Annual Hours Per Response (e) = (b) + (c) + (d)	5.5
Total Annual Hours (f)=(a)*(e)	171
Cost to Identify and Submit Measure (@ practice administrator's labor rate of \$123.06/hr) * 2.4 hr = (g)	\$295.34
Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician's labor rate of \$274.44/hr) * 3.1 hr = (h)	\$850.77
Total Annual Cost Per Submitted Measure (i) = (g) + (h)	\$1,146.11
Total Annual Cost (j)=(a)(i)	\$35,529

In Table 91, we illustrate the net change in estimated burden for the call for quality measures using the currently approved burden in the CY 2023 PFS final rule (87 FR 70159 through 70160). In aggregate, the estimated increase in the number of quality measure submissions will result in an adjustment of +11 hours (+2 measure submissions x 5.5 hr/measure submission) at a cost of \$2,292 (+2 measure submissions x \$1,146.11/measure submission) for the CY 2024 performance period/2026 MIPS payment year.

TABLE 91: Burden Adjustments for Call for Quality Measures

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours for Respondents (a)	160
Total Annual Hours for Respondents in CY 2023 PFS Final Rule (b) (See Table 85, row (f))	171
Difference (c) = (b) - (a)	+11
Total Currently Approved Annual Cost for Respondents (d)	\$33,237
Total Annual Cost for Respondents in CY 2024 PFS Proposed Rule (e) (See Table 85, row (j))	\$35,529
Difference (f) = (e) - (d)	+\$2,292

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2024 performance period/2026 MIPS payment year, MIPS eligible clinicians, groups, subgroups, and APM Entities can submit Promoting Interoperability performance category data through direct log in and upload, or log in and attest submission types. We note that the log in and attest submission type is only available for the Promoting Interoperability performance category and is not available for the quality performance category. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, we anticipate that MIPS eligible individual clinicians, groups, subgroups, and APM Entities will use the same data submission type for both the quality and Promoting Interoperability performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. We note that this analysis assesses burden by performance category and submission type and emphasizes that MIPS is a consolidated program. We analyze data submitted by MIPS eligible clinicians, groups, subgroups and APM Entities, and assesses clinician performance based on all the four MIPS performance categories, as applicable.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The following proposed changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77240 through 77243), CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60011 through 60012, 84 FR 63134 through 63135, 85 FR 84984 through 84985, 86 FR 65596 through 65598, and 87 FR 70160 through 70162, respectively) for our previously finalized requirements

for, and our analysis of the information collection and reporting burden associated with, reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians may submit an application requesting reweighting to zero percent for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances as set forth in § 414.1380(c)(2), including, but not limited to, extreme and uncontrollable circumstances and significant hardship or other type of exception (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Table 92 summarizes our analysis of the estimated burden for MIPS eligible clinicians to apply for reweighting of the Promoting Interoperability performance category to zero percent due to a significant hardship or other exception as provided in § 414.1380(c)(2)(i)(C).

Respondents (MIPS eligible individual clinicians, groups, or APM Entities) who apply for a reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances (for example, PHE for COVID-19, vendor issues, etc.) will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

In section IV.A.4.f.(4)(f) of this rule, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2024 performance period/2026 MIPS payment year and making the corresponding revisions to the regulatory text at § 414.1380(c)(2)(i)(A)(4)(iii). In our analysis of the information collection and reporting burden, we are not adjusting our estimated number of respondents submitting reweighting applications due to this proposal because these proposed

changes only modify the regulatory text and do not change the existing reweighting policy for these clinician types participating in MIPS in the CY 2024 performance period/2026 MIPS payment year. To further clarify, these clinician types are automatically reweighted for the Promoting Interoperability performance category and do not need to submit a reweighting application, and therefore do not impact our information collection and reporting burden analysis.

Based on the number of reweighting applications received at the time of the publication of this rule for the CY 2022 performance period/2024 MIPS payment year, we are adjusting our burden estimates relevant to this ICR. In this proposed rule, we estimate that we will receive a total of 29,227 applications to request reweighting for any or all the four MIPS performance categories for the CY 2024 performance period/2026 MIPS payment year. Out of the 29,227, we estimate that 2,706 respondents will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship or other exception as provided in § 414.1380(c)(2)(i)(C). We estimate the remaining 26,510 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance.

Additionally, we estimate 11 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2024 performance period/ 2026 MIPS payment year. This adjustment results in an increase of 23,788 respondents compared to our currently approved estimate of 5,439 respondents (87 FR 70161). This increase is based on the actual number of reweighting applications submitted for the CY 2022 performance period/2024 MIPS payment year. We note this estimate reflects the significant increase in the number of submitted applications due to extending the deadline, as a result of the ongoing PHE for COVID-19 at the time, for submitting the reweighting applications for the CY 2022 performance period/2024 MIPS payment year to March 3rd, 2023.

Consistent with our assumptions in the CY 2023 PFS final rule (87 FR 70160 through 70162), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the reweighting application. In Table 92, we estimate an annual burden of 7,307 hours (29,227 applications x 0.25 hr/application) at a cost of \$755,518 (29,227 applications x \$25.85/application).

TABLE 92: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	Burden Estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	29,216
# APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)	11
Total Applications Submitted (c)	29,227
Annual Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e) = (c) * (d)	7,307
Cost to Submit a Reweighting Application @ computer systems analyst's labor rate of \$103.40/hr (f) = (d) * \$103.40/hr	\$25.85
Total Annual Cost (g) = (e) * (f)	\$755,518

In Table 93, we illustrate the proposed net change in estimated burden for submission of reweighting applications for Promoting Interoperability and other performance categories using the currently approved burden in the CY 2023 PFS final rule (87 FR 70160 through 70162). The proposed adjustment in the estimated number of respondents, from 5,439 to 29,227 respondents, results in an increase of 23,788 respondents. In aggregate, using our currently approved per response time estimate, as shown in Table 93, the proposed increase in 23,788 respondents results in an increase of 5,947 hours (+23,788 responses x 0.25 hr/response) and \$614,920 (+5,947 hr x \$103.40/hr) for the CY 2024 performance period/2026 MIPS payment year.

TABLE 93: Change in Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours in CY 2023 PFS final rule (a)	1,360
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 92, row (c))	7,307
Difference (c) = (b) - (a)	+5,947
Total Currently Approved Annual Cost in CY 2023 PFS final rule (d)	\$140,598
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 92, row (e))	\$755,518
Difference (f) = (e) - (d)	+\$614,920

(3) Submitting Promoting Interoperability Data

We are not proposing any new or revised collection of information requirements or burden related to the submission of Promoting Interoperability performance category data. We note the policy proposals in section IV.A.4.f.(4) of this rule related to the submission of Promoting Interoperability data do not impact the currently approved estimated burden for this ICR. We discuss in detail below the proposed policies and our reasons for not changing our currently approved burden for submission of Promoting Interoperability data. The submission of Promoting Interoperability data requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any submission of Promoting Interoperability changes under that control number.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77509 through 77511, and 82 FR 53919 through 53920, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60013 through 60014, 84 FR 63135 through 63137, 85 FR 84985 through 84987, 86 FR 65598 through 65600, and 87 FR 70162 through 70164, respectively) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

In section IV.A.4.f.(4)(b) of this proposed rule, we are proposing that for the CY 2026 MIPS payment year, the performance period for the Promoting Interoperability performance

category is a minimum of any continuous 180-day period within CY 2024, up to and including the full CY 2024 (January 1, 2024, through December 31, 2024). We are proposing to modify the Promoting Interoperability performance category performance period that we established under § 414.1320(h)(1) to remove subsequent years, include the 2025 MIPS payment year, and add § 414.1320(i)(1) to reflect our proposal. We assume MIPS eligible clinicians and groups that currently submit data for the Promoting Interoperability performance category would utilize the CEHRT for an entire calendar year performance period and therefore, the proposed increase in the length of the performance period for the Promoting Interoperability performance category from 90 to 180 days would not create additional burden for MIPS eligible clinicians and groups that would submit data for the Promoting Interoperability performance category. We note that this is consistent with the discussion of burden for the above policy in the FY 2022 IPPS final rule (86 FR 45515).

In section IV.A.4.f.(4)(d)(i) of this rule, we are proposing changes to the Query of Prescription Drug Monitoring Program Measure under the Electronic Prescribing Objective. Specifically, we are proposing to modify the second exclusion criterion to state that any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period can claim the second exclusion. The proposed changes would not affect the requirements for MIPS eligible clinicians and groups that submit data for the Promoting Interoperability performance category since the revision is meant to revise the previously finalized second exclusion in the CY 2018 Quality Payment Program final rule (82 FR 53679). Therefore, we are not making any adjustments to our currently approved estimated burden for this ICR.

In section IV.A.4.f.(4)(d)(ii) of this rule, we are proposing to revise the e-Prescribing measure description in Table 45 to read “At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT” and the numerator will be

updated to read to indicate “Number of prescriptions in the denominator generated and transmitted electronically” to reflect the removal of the health IT certification criterion “drug-formulary and preferred drug list checks.” These proposed revisions would not affect the requirements for MIPS eligible clinicians and groups that submit data for the Promoting Interoperability performance category since these changes provide technical updates to the e-prescribing measure. Therefore, we are not making any adjustments to our currently approved estimated burden for this ICR.

In section IV.A.4.f.(4)(d)(iii) of this rule, we are proposing to modify our requirements for the SAFER Guides measure beginning with the CY 2024 performance period/2026 MIPS payment year and subsequent years, to require MIPS eligible clinicians conduct, and therefore attest “yes” an annual self-assessment of the CEHRT using the High Priority Practices SAFER Guide (*available at <https://www.healthit.gov/topic/safety/safer-guides>*), at any point during the calendar year in which the performance period occurs. We note we have captured the estimated burden for reporting this measure in the CY 2022 PFS final rule (86 FR 65599) and the proposed revision would not affect the data collection and submission requirements for MIPS eligible clinicians and groups that submit data for the Promoting Interoperability performance category. Therefore, we are not making any adjustments to our currently approved estimated burden for this ICR.

h. ICRs Regarding the Nomination of Promoting Interoperability Measures

The following proposed changes associated with the information collection related to the nomination of Promoting Interoperability measures will be submitted to OMB for review to remove the information collection relevant to the nomination of Promoting Interoperability measures under control number 0938-1314 (CMS 10621). This rule does not create any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability performance category measures. Due to a consistent decline in the number of

submissions received for the Promoting Interoperability performance category measures, we estimate to receive fewer than 10 responses for this ICR. Therefore, we are proposing to remove the ICR for nomination of Promoting Interoperability performance category measures.

As shown in Table 94, we estimate an annual burden of zero hours at a cost of \$0 for the CY 2024 performance period/2026 MIPS payment year.

TABLE 94: Estimated Burden for Call for Promoting Interoperability Measures

Burden and Respondent Descriptions	Burden Estimate
# of Organizations Nominating New Promoting Interoperability Measures (a)	0
# of Hours Per Medical and health services manager to Identify and Propose Measure (b)	0.30
# of Hours Per Clinician to Identify Measure (c)	0.20
Annual Hours Per Respondent (d) = (b) + (c)	0.50
Total Annual Hours (e) = (a) [x] (d)	0
Cost to Identify and Submit Measure (@ medical and health services manager's labor rate of \$123.06/hr.) (f) = (b) [x] \$123.06/hr	\$36.92
Cost to Identify Improvement Measure (@ physician's labor rate of \$274.44/hr.) (g) = (c) [x] \$274.44/hr	\$54.89
Total Annual Cost Per Respondent (h) = (f) + (g)	\$91.81
Total Annual Cost (i) = (a) [x] (h)	\$0

In Table 95, we illustrate the proposed net change in estimated burden for nomination of Promoting Interoperability measures using the currently approved burden in the CY 2023 PFS final rule (87 FR 70163). The proposed removal of the ICR for nomination of Promoting Interoperability measures results in a decrease of 5 hours (-10 responses x 0.5 hr/response) and a decrease of \$918 for the CY 2024 performance period/2026 MIPS payment year.

TABLE 95: Change in Estimated Burden for Nomination of Promoting Interoperability Measures

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Hours in CY 2023 PFS final rule (a)	5
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 94, row (c))	0
Difference (c) = (b) - (a)	-5
Total Currently Approved Annual Cost in CY 2023 PFS final rule (d)	\$918
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 94, row (e))	0
Difference (f) = (e) - (d)	-\$918

i. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

We are not proposing any new or revised collection of information requirements or burden related to the submission of improvement activity data. We note that the policy proposal in section IV.A.4.f.(3) of this proposed rule related to the improvement activities submission does not impact our currently estimated burden for this ICR. We discuss in detail below the proposed policy and reasons that it does not change our currently approved burden for improvement activities submission. The improvement activity submission requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not proposing any improvement activity submission changes under that control number.

In section IV.A.4.f.(3)(b)(ii) of this proposed rule, we are proposing changes to the improvement activities inventory for the CY 2024 performance period/2026 MIPS payment year and future years as follows: adding five new improvement activities; modifying one existing improvement activity; and removing four previously adopted improvement activities. We do not believe the changes will impact our currently approved time for interested parties to submit information because MIPS eligible clinicians are still required to submit the same number of activities and the estimated per response time for each activity is uniform. Therefore, we are not proposing to adjust our currently approved burden for improvement activities submission as a result of this proposal.

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The proposed changes associated with data submission will be submitted to OMB for review under control number 0938-1314 (CMS 10621).

In this rule, based on the actual number of respondents that submitted improvement activity nominations, we are proposing to adjust the estimated number of improvement activity

nominations that were previously approved in the CY 2022 PFS final rule (86 FR 65603 through 65605). We estimate that we will receive approximately 15 improvement activity nominations for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 16 improvement activity nominations from our currently approved estimate of 31 nominations in the CY 2022 PFS final rule (86 FR 65605). In Table 96, for the CY 2024 performance period/ 2026 MIPS payment year, we continue to estimate that the per response time is 4.4 hours. This will result in an estimated annual burden of 66 hours (15 nominations x 4.4 hr/nomination) at a cost of \$11,755 (15 x [(2.8 hr x \$123.06/hr for a medical and health services manager) + (1.6 hr x \$274.44/hr for a physician)]).

TABLE 96: Estimated Burden for Nomination of Improvement Activities

Burden and Respondent Descriptions	Burden Estimate
# of Nominations of New IAs (a)	15
# of Hours Per Medical and Health Services Manager (b)	2.8
# of Hours Per Physician (c)	1.6
Annual Hours Per Respondent (d)= (b) + (c)	4.4
Total Annual Hours (e) = (a) * (d)	66
Cost to Nominate an IA (@ medical and health services manager's labor rate of \$123.06/hr) (f) = (b) x \$123.06/hr	\$344.57
Cost to Nominate an IA (@ physician's labor rate of \$274.44/hr) (g) = (c) x \$274.44/hr	\$439.10
Total Annual Cost Per Respondent (h) = (f) + (g)	\$783.67
Total Annual Cost (i) = (a) * (h)	\$11,755

In Table 97, we illustrate the proposed net change in estimated burden for nomination of improvement activities using the currently approved burden in the CY 2022 PFS final rule (86 FR 65605). In aggregate, using our currently approved per response time estimate, the proposed decrease in the number of respondents submitting improvement activity nominations results in a total annual adjustment of -70 hours (-16 responses x 4.4 hr/nomination) at a cost of -\$12,539 (-16 x [(2.8 hr x \$123.06/hr) + (1.6 hr x \$274.44/hr)]) for the CY 2024 performance period/2026 MIPS payment year.

TABLE 97: Change in Estimated Burden for Nomination of Improvement Activities

Burden and Respondent Descriptions	CY 2024 Performance Period
Total Currently Approved Annual Hours (a)	136
Total Annual Hours for Respondents in CY 2024 PFS proposed rule (b) (See Table 94, row (d))	66
Difference (c) = (b) - (a)	-70
Total Currently Approved Annual Cost (d)	\$24,294
Total Annual Cost for Respondents in CY 2024 PFS proposed rule (e) (See Table 94, row (i))	\$11,755
Difference (f) = (e) - (d)	-\$12,539

k. Nomination of MVPs

This rule does not propose any new or revised collection of information requirements or burden related to the nomination of MVPs. The requirements and burden for nomination of MVPs are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes to the nomination of MVPs under that control number.

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938-1197; CMS-1500 and CMS-1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the policies in this rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not making any changes under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule is not proposing any new or revised collection of information requirements or burden related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. The requirements and burden for Partial QP Elections are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes to Partial QP Elections under that control number.

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician -Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements related to Other Payer Advanced APM determinations.

(1) Payer-Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements related to the Payer-Initiated Process. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the Payer- Initiated process under that control number.

(2) Eligible Clinician-Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements or burden related to the Eligible Clinician-Initiated Process. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not proposing any changes to the Eligible Clinician-Initiated Process under that control number.

(3) Submission of Data for QP Determinations under the All-Payer Combination Option (§ 414.1440)

This rule is not proposing any new or revised collection of information requirements or burden related to the Submission of Data for QP Determinations under the All-Payer Combination Option. The requirements and burden for the All-Payer Combination option are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes under that control number.

o. ICRs Regarding Voluntary Participants Election to Opt-Out of Performance Data Display on Compare Tools (§ 414.1395)

This rule is not proposing any new or revised collection of information requirements or burden related to the election by voluntary participants to opt-out of public reporting on Compare Tools. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes to the election of voluntary participants to opt-out of performance data display on Compare Tools under that control number.

p. Summary of Annual Quality Payment Program Burden Estimates

Table 99 summarizes this proposed rule's total burden estimates for the Quality Payment Program for the CY 2024 performance period/2026 MIPS payment year.

In the CY 2023 PFS final rule, the total estimated burden for the CY 2024 performance period/2026 MIPS payment year (see Table 99, row a) was 710,644 hours at a cost of \$75,687,130 (87 FR 70169). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2023 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2023 PFS final rule into the CY 2024 performance period/2026 MIPS payment year is 626,007 hours at a cost of \$70,778,884 (see Table 99, row b). These represent a decrease of 84,637 hours and a decrease of \$4,908,246. To understand the burden implications of the policies in this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2023 PFS final rule into the CY 2024 performance period/2026 MIPS payment year. This burden estimate of 630,570 hours at a cost of \$71,317,983 (see Table 99, row c) reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and more accurately reflects the exclusion of QPs from all MIPS performance categories, an increase of 4,563 hours and \$539,099 (see Table 99, row d). This burden estimate is higher than the burden approved for information collection related to the CY 2023 PFS final rule due to updated data and assumptions. Our total

burden estimate for the CY 2024 performance period/2026 MIPS payment year is 626,568 hours and \$70,858,430 (see Table 99, row e), which represents an increase of 561 hours and \$79,546 from the CY 2023 PFS final rule (see Table 99, row f). The difference of -4,002 hours (561 hours – 4,563 hours) and -\$459,553 (\$79,546 – \$539,099) (see Table 99, row g) between this estimate and the total burden shown in Table 99 is the decrease in burden associated with impacts of the policies for the CY 2024 performance period/2026 MIPS payment year.

TABLE 98: Summary of Burden Estimates and Requirements from the CY 2024 PFS Proposed Rule

CY 2024 Performance Period/2026 MIPS Payment Year		
Burden Estimate Description	Time (Hours)	Cost
Currently approved burden in CY 2023 PFS Final Rule (a)	710,644	\$75,687,130
CY 2023 PFS Final Rule w/ updated wage rates and ICRs (b)	626,007	\$70,778,884
CY 2023 PFS Final Rule w/ updated data and assumptions (c)	630,570	\$71,317,983
Change in burden due to updated data and assumptions (d) = (c) – (b)	4,563	\$539,099
CY 2024 PFS Proposed Rule Total Burden (e)	626,568	\$70,858,430
Total change in burden (as shown in Table D-A43) (f) = (e) – (b)	561	\$79,546
Change in burden associated with policies (g) = (f) – (d)	-4,002	-\$459,553

Table 100 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this proposed rule. We have divided the

reasons for our change in burden into those related to proposed policies in the CY 2024 PFS rule and those related to adjustments in burden continued from the CY 2023 PFS final rule policies that reflect updated data and revised methods.

TABLE 100: Reasons for Proposed Change in Burden Compared to the Currently Approved CY 2023 Information Collection Burden

ICR Title	Changes in burden due to CY 2024 proposed rule policies	Adjustments in burden continued from CY 2023 PFS final rule policies due to revised methods or updated data
QCDR Simplified Self-Nomination and other Requirements (See Table 61)	None	Proposed addition of a new ICR.
QCDR Full Self-Nomination and other Requirements (See Table 63)	None	Decrease in number of respondents due to updated assumptions. Decrease in the total number of hours due to restructuring the ICR.
Qualified Registry Simplified Self-Nomination and other Requirements (See Table 65)	None	Proposed addition of a new ICR.
Qualified Registry Full Self-Nomination and other Requirements (See Table 67)	None	Decrease in number of respondents due to updated assumptions. Decrease in the total number of hours due to restructuring the ICR.
Third Party Intermediary Plan Audits (see Table 70)	None	New ICR. Increase in number of respondents and hours due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
Survey Vendor Requirements (see Table 72)	None	Decrease in number of respondents due to updated assumptions.
Quality Performance Category: Medicare Part B Claims Collection Type (see Table 77)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the claims collection type.	None
Quality Performance Category: QCDR/ MIPS CQM Collection Type (see Table 79)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the QCDR and MIPS CQM collection type.	None
Quality Performance Category: eCQM Collection Type (see Table 81)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the eCQM collection type.	None
MVP Registration (see Table	Increase in number of	None

D. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule to OMB for its review of the rule’s information collection requirements. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed in this section, please visit the CMS Web site at <https://www.cms.gov/regulations-and-guidance/legislation/paperworkreductionactof1995/pralisting>, or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please submit your comments electronically as specified in the DATES and ADDRESSES section of this proposed rule and identify the rule (CMS-1784-P) the ICR’s CFR citation, and OMB control number.

VI. Response to Comments

Because of the large number of public comments, we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the "DATES" section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

In this proposed rule, we are proposing payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2021 (CAA, 2021); sections 301, 302, 303, 304, and 305 under the Consolidated Appropriations Act, 2022 (CAA, 2022); sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018, sections 4113, 4114, and 4121 under the Consolidated Appropriations Act of 2023 (CAA, 2023), section 90004 of the Infrastructure Investment and Jobs Act, section 6 of the Sustaining Excellence in Medicaid Act of 2019, and sections 11101, 11402, 11403, 11407 under the Inflation Reduction Act (IRA). Our policies in this rule specifically address: changes to the PFS; other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; updates and refinements to Medicare Shared Savings Program (Shared Savings Program) requirements; updates to the Quality Payment Program; updates to the Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare provider enrollment policies; updates to electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan (section 2003 of the SUPPORT Act); changes to the regulations associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System; and changes to release Medicare

Advantage risk adjustment data early for use with Care Compare websites. The policies reflect CMS' stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Extension of Certain Medicare Telehealth Flexibilities, Under Section 1834(m) of the Act, as Amended by the CAA, 2023

Section II.D.1.e. of this proposed rule implements section 4113, of the CAA, 2023, which extended through CY 2024 several temporary flexibilities for Medicare telehealth services adopted during the PHE for COVID-19. Specifically, section 4113 extended the temporary inapplicability of geographic and location restrictions, extended the temporary expansion of practitioner types who can be paid for Medicare telehealth services, delayed the in-person visit requirements for mental health services furnished via telehealth, and extended audio-only flexibilities for certain telehealth services. This provision is necessary to fulfill the statutory requirement to implement this extension through December 31, 2024.

b. Drugs and Biological Products Paid Under Medicare Part B

Section III.A.1. of this proposed rule proposes regulations text changes to implement provisions of the Inflation Reduction Act of 2022 that affect payment amounts or patient out-of-pocket costs for certain drugs and biologicals payable under Part B. Two provisions affect payment amounts for biosimilar biological products. Section 11402 of the IRA amends the payment limit for new biosimilars furnished on or after July 1, 2024 during the initial period when ASP data is not available. Section 11403 makes changes to the payment limit for certain biosimilar products with an ASP that is not more than the ASP of the reference biological for a period of 5 years. Two other provisions make statutory changes to patient out-of-pocket costs for certain drugs payable under Medicare Part B. Section 11101 of the IRA requires that beneficiary coinsurance for a Part B rebatable drug is to be based on the inflation-adjusted payment amount

if the Medicare payment amount for a calendar quarter exceeds the inflation-adjusted payment amount, beginning on April 1, 2023. Section 11407 makes statutory changes to waive the deductible for insulin that is furnished through a covered item of durable medical equipment (DME) and establishes a \$35 cap on cost sharing for a month's supply of insulin furnished through a covered item of DME, both beginning July 1, 2023.

Section III.A.3 of this proposed rule proposes policies to implement section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) (IIJA) which requires drug manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. These provisions are necessary to fulfill the statutory requirement to implement this policy effective January 1, 2023 and reduce unnecessary Medicare spending for discarded drug.

c. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

Section III.B.2. of this proposed rule implements sections 4113, 4121, and 4124 of the CAA, 2023. Section 4113 of the CAA, 2023 amends section 1834(m)(8) of the Act to extend payment for telehealth services furnished by RHCs and FQHCs for the limited period beginning on the first day after the end of the PHE for COVID-19 and ending on December 31, 2024. Section 4113 also delays the in-person requirements under Medicare for mental health visits furnished by RHCs and FQHCs via telecommunications technology until January 1, 2025.

Section 4121 of the CAA, 2023 amends section 1861(aa)(1)(B) of the Act by adding marriage and family therapists (MFT) and mental health counselors (MHC) as eligible practitioners of RHCs and FQHCs beginning January 1, 2024. Section 4121 allows MFTs and MHCs to bill directly and be paid as an RHC and FQHC practitioner under the RHC AIR an FQHC PPS.

Section 4124 of the CAA, 2023 establishes an Intensive Outpatient benefit in RHCs and FQHCs. Proposals related to implementation of IOP for RHCs and FQHCs are discussed in the CY 2024 OPPTS proposed rule.

d. Clinical Laboratory Fee Schedule (CLFS) – Proposed Revisions Consistent with Recent Statutory Changes

Section III.D.5. of this rule proposes conforming regulations text changes for CLFS data reporting requirements due to the enactment of section 4114 of the CAA, 2023. For clinical diagnostic laboratory tests (CDLTs) that are not advanced diagnostic laboratory tests (ADLTs), the CAA, 2023 delays the next data reporting period by one year. Instead of taking place from January 1, 2023 through March 31, 2023, data reporting will now take place from January 1, 2024 through March 31, 2024, based on the original data collection period of January 1, 2019 through June 30, 2019. Data reporting for these tests then resumes on a 3-year cycle (2027, 2030, etc.). Additionally, the CAA, 2023 amends the statutory provisions for the phase-in of payment reductions resulting from private payor rate implementation to specify that the applicable percent in CY 2023 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2023 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2022. The CAA, 2023 further amends the statutory phase-in provisions to provide that for CYs 2024 through 2026, the payment amount for a CDLT may not be reduced by more than 15 percent as compared to the payment amount for that test established in the preceding year.

e. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (Section 2003 of the SUPPORT Act)

In this rule, we are proposing changes to the electronic prescribing for controlled substances (EPCS) requirement specified in section 2003 of the SUPPORT Act (referred to as the CMS EPCS Program). The proposals specify the basis for the evaluation of compliance by

describing how prescriptions are calculated, remove the same entity exception while conditioning the electronic prescribing requirement as subject to the exemption in § 423.160(a)(3)(iii), identify non-compliance actions for subsequent measurement years, and update other CMS EPCS Program exceptions. Previously finalized policies did not include actions for non-compliance after the 2024 measurement year, and we need to identify actions for non-compliance in subsequent measurement years.

f. Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System

Section 4103 of the CAA amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons set forth in those subsections through December 31, 2024. The ambulance extender provisions are enacted through legislation that is self-implementing. We are proposing only to revise the dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

Section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. In this proposed rule, we are proposing revisions to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

g. Quality Payment Program

This proposed rule is also necessary to make changes to the Quality Payment Program to move the program forward to focus more on measurement efforts, refine how clinicians will be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and highlight the value of participating in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS

eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. Currently, reporting for traditional MIPS is seen as siloed across the performance categories. These policy proposals are intended to promote better quality reporting to improve patient health outcomes by coordinating reporting for MIPS across performance categories, and make changes to scoring that will provide a better picture of clinicians' performance.

2. Discretionary Provisions

a. Drugs and Biological Products Paid Under Medicare Part B

In section III.A. of this proposed rule, as part of our continued implementation, section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) (IIJA) which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. We are proposing the date of the initial report to manufacturers, the date for subsequent reports, method of calculation when there are multiple manufacturers for a refundable drug, increased applicable percentages for drugs with unique circumstances, and a future application process by which manufacturers may apply for an increased applicable percentage for a drug.

b. RHCs and FQHCs

In section III.B.2. of this proposed rule, we are proposing to continue to define "immediate availability" as including real-time audio and visual interactive telecommunications for the direct supervision of services and supplies furnished incident to a physician's service through December 31, 2024 for RHCs and FQHCs.

In section III.B.3. of this proposed rule, we are proposing to change the required level of supervision for behavioral health services furnished "incident to" a physician or non-physician practitioner's services at RHCs and FQHCs to allow general supervision, rather than direct supervision, consistent with the policies finalized under the PFS for CY 2023.

In section III.B.4. of this proposed rule, we are proposing a policy to include Remote Patient Monitoring (RPM), Remote Therapeutic Monitoring (RTM), Community Health Integration (CHI), and Principal Illness Navigation (PIN) services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. We are proposing to revise the calculation for G0511 to include the weighted average of these services using the CY 2021 PFS non-facility utilization. These provisions are necessary in that we evaluate coding provisions in this rule and their applicability to RHCs and FQHCs.

Also, in section III.B.4. of this proposed rule, we are proposing to remove the direct supervision requirement for obtaining consent for CCM services and virtual communication services furnished in RHCs and FQHCs.

c. Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR) Expansion of Supervising Practitioners

In section III.E. of this proposed rule, we are proposing revisions to §§ 410.47 (PR) and 410.49 (CR/ICR) to add to the types of practitioners who may supervise PR, CR and ICR programs to also include a physician assistant (PA), nurse practitioner (NP) or clinical nurse specialist (CNS). These provisions are necessary to fulfill the statutory requirement to implement these changes made in section 51008 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123, enacted February 9, 2018) (BBA of 2018) effective January 1, 2024.

d. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.F. of this proposed rule, we are proposing to allow periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary through the end of CY 2024, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and all other applicable requirements are met. We believe this modification is needed because extending

these audio-only flexibilities for an additional year may minimize disruptions associated with the conclusion of the PHE, and evidence has shown that Medicare beneficiaries from historically underserved populations are more likely to be offered and use audio-only telemedicine services than audio-video services.³³⁵ Therefore, minimizing disruptions to care for audio-only periodic assessments may further promote health equity and minimize disparities in access to care.

e. Medicare Shared Savings Program

In section III. G. of this proposed rule, we are proposing modifications to the Shared Savings Program to further advance Medicare's overall value-based care strategy of growth, alignment, and equity, and to respond to concerns raised by ACOs and other interested parties. The proposed changes to the Shared Savings Program include the following: modifications to the quality performance standard and reporting requirements under the APP that would continue to move ACOs toward digital measurement of quality and to align with QPP; modifications to the step-wise beneficiary assignment methodology to add a new third step and related changes to how we identify the assignable beneficiary population; updates to the definition of primary care services used for purposes of beneficiary assignment to remain consistent with billing and coding guidelines; refinements to the financial benchmarking methodology for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years to (1) cap the risk score growth in an ACO's regional service area when calculating regional trends used to update the historical benchmark at the time of financial reconciliation for symmetry with the cap on ACO risk score growth, (2) apply the same CMS-HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year, (3) further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring for medically complex, high cost beneficiaries, and (4) specify the circumstances in which CMS would recalculate the

³³⁵ <https://pubmed.ncbi.nlm.nih.gov/33471458/>.

prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year following a reopening of ACO shared savings and shared losses calculations; refine newly established AIP policies; make updates to other programmatic areas including the program's eligibility requirements; and make timely technical changes to the regulations for clarity and consistency.

f. Medicare Part B Payment for Preventive Vaccine Administration Services

Section III.H.3 of this proposed rule discusses the implementation of policies that impact the payment amount for administration of preventive vaccines paid under the Part B vaccine benefit, specifically the proposed in-home additional payment for Part B vaccine administration. Section III.H.4. of this proposed rule codifies other amendments to the regulation text for Part B preventive vaccine administration. These provisions are necessary to provide stable payment for preventive vaccine administration and to allow predictability for providers and suppliers to rely on for building and sustaining robust vaccination programs.

g. Appropriate Use Criteria (AUC) for Advanced Diagnostic Imaging

In section III.J. of this proposed rule, we are proposing to pause implementation of the AUC program for reevaluation and to rescind the current AUC program regulations at § 414.94. These provisions are necessary because we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization.

h. Medicare and Medicaid Provider Enrollment

This proposed rule also proposes several regulatory enhancements to our Medicare and Medicaid provider enrollment policies. These provisions focus on, but are not limited to: (1)

expanding the bases for denying or revoking a provider's or supplier's Medicare enrollment; (2) revising the effective dates of certain Medicare revocations; and (3) revising certain policies regarding Medicaid terminations. These changes are necessary to help ensure that payments are made only to qualified providers and suppliers and/or to increase the efficiency of the Medicare and Medicaid provider enrollment processes. We believe that fulfilling these objectives would assist in protecting the Trust Funds and Medicare beneficiaries.

i. Expand Diabetes Screening and Diabetes Definitions

In section III.L. of this proposed rule, we are proposing to (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test, (2) expand and simplify the frequency limitations for diabetes screening, and (3) simplify the regulatory definition of "diabetes" for diabetes screening, Medical Nutrition Therapy (MNT) and Diabetes Outpatient Self-Management Training Services (DSMT). Diabetes is a chronic disease that affects how the body turns food into energy and includes three main types: Type 1, Type 2 and gestational diabetes. The Centers for Disease Control and Prevention (CDC) reports that approximately 37.3 million Americans are living with diabetes and an additional 96 million Americans are living with prediabetes.³³⁶ CDC reports that 326,000 persons age 65 years and older are newly diagnosed with diabetes each year. CDC also estimates that among persons age 65 years and older, 21 percent have been diagnosed with diabetes while 5 percent have undiagnosed diabetes.³³⁷ Diabetes is the leading cause of kidney failure and new cases of blindness among adults, and the sixth leading cause of death among adults age 65 years and older in the US.³³⁸ Screening is performed on persons who may not exhibit symptoms to identify persons with either prediabetes or diabetes, who can then be referred for appropriate prevention

³³⁶ CDC Website on diabetes at <https://www.cdc.gov/diabetes/basics/index.html>.

³³⁸ Heron M. Deaths: Leading causes for 2019. National Vital Statistics Reports; vol 70 no 9. Hyattsville, MD: National Center for Health Statistics. 2021. DOI: <https://dx.doi.org/10.15620/cdc:107021>.

or treatment, with the intention of improving health outcomes.

j. Basic Health Program Provisions

Section 1331 of the ACA requires the Secretary to establish a BHP, and section 1331(c)(4) of the ACA specifically provides that a State shall coordinate the administration of, and provision of benefits under the BHP with other State programs. Additionally, section 1331(f) of the ACA requires the Secretary to review each State's BHP on an annual basis. These proposed regulations build from previous BHP regulations to provide for options for BHP implementation and operations as well as oversight of the BHP program, beginning with program year 2024.

k. A Social Determinants of Health Risk Assessment in the Annual Wellness Visit

In section III.S. of this proposed rule, we are proposing to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the Annual Wellness Visit (AWV) by adding a new Social Determinants of Health (SDOH) Risk Assessment as an optional, additional element with an additional payment. We propose that the SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWV. The AWV includes the establishment (or update) of the patient's medical and family history, application of a health risk assessment and the establishment (or update) of a personalized prevention plan. The AWV also provides an optional Advance Care Planning (ACP) service. The AWV is covered for eligible beneficiaries who are no longer within 12 months of the effective date of their first Medicare Part B coverage period and who have not received either an Initial Preventive Physical Examination (IPPE) or AWV within the past 12 months. The goals of AWV are health promotion, disease prevention and detection and include education, counseling, a health risk assessment, referrals for prevention services, and a review of opioid use. Additional information about the AWV can be found on the CMS website at

(<https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/preventive-services/medicare-wellness-visits.html>).

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094 entitled “Modernizing Regulatory Review” (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), and Executive Order 13132 on Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). The Executive Order 14094 entitled “Modernizing Regulatory Review” (hereinafter, the Modernizing E.O.) amends section 3(f)(1) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) having an annual effect on the economy of \$200 million or more in any 1 year (adjusted every 3 years by the Administrator of OIRA for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review

would meaningfully further the President's priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with significant effects as per section 3(f)(1) (\$200 million or more in any 1 year). Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1)) as measured by the \$200 million or more in any 1 year. Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at <https://www.sba.gov/document/support-table-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this

section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately \$177 million. This rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this rule does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives;

and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and to implement provisions of the statute. We provide information for each of the policy changes in the relevant sections of this proposed rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives we considered, if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2023 with payment rates for CY 2024 using CY 2022 Medicare utilization. The payment impacts described in this proposed rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2024, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, the CAA, 2023 provided a one-time 2.50 percent increase in PFS payment amounts for services furnished on or after January 1, 2023, and a one-time 1.25 percent increase in PFS payment amounts for services furnished on or after January 1, 2024, and required that the supplementary increases shall not be taken into account in determining PFS payment rates for subsequent years.

To calculate the CY 2024 PFS conversion factor (CF), we took the CY 2023 conversion factor without the one-year 2.50 percent payment increase provided by the CAA, 2023 for CY 2023 and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs and the 1.25 percent PFS payment increase provided by the CAA, 2023 for CY 2024. We estimate the CY 2024 PFS CF to be 32.7476 which reflects the -2.17 percent budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the 1.25 percent payment increase for services furnished in CY 2024, as provided in the CAA, 2023. We estimate the CY 2024 anesthesia CF to be 20.4370 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 102: Calculation of the CY 2024 PFS Conversion Factor

CY 2023 Conversion Factor		33.8872
Conversion Factor without the CAA, 2023 (2.5 Percent Increase for CY 2023)		33.0607
CY 2024 RVU Budget Neutrality Adjustment	-2.17 percent (0.9783)	
CY 2024 1.25 Percent Increase Provided by the CAA, 2023	1.25 percent (1.0125)	
CY 2024 Conversion Factor		32.7476

TABLE 103: Calculation of the CY 2024 Anesthesia Conversion Factor

CY 2023 National Average Anesthesia Conversion Factor		21.1249
Conversion Factor without the CAA, 2023 (2.5 Percent Increase for CY 2023)		20.6097
CY 2024 RVU Budget Neutrality Adjustment	-2.17 percent (0.9783)	
CY 2024 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.11 percent (1.0011)	
CY 2024 1.25 Percent Increase Provided by the CAA, 2023	1.25 percent (1.0125)	
CY 2024 Conversion Factor		20.4370

Table 104 shows the payment impact of the policies contained in this proposed rule on PFS services. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 104 (CY 2023 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 104.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2022 utilization and CY 2023 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2024 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- Column D (Impact of PE RVU Changes): This column shows the estimated CY 2024 impact on total allowed charges of the changes in the PE RVUs.
- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2024 impact on total allowed charges of the changes in the MP RVUs.

- Column F (Combined Impact): This column shows the estimated CY 2024 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

* Column F may not equal the sum of columns C, D, and E due to rounding.

In recent years, we have received requests from interested parties for CMS to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented high-level information to CMS suggesting that Medicare payment policies are directly responsible for the consolidation of privately-owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in the delivery of health care, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in last year's final rule (87 FR 69429 through 69438). As part of our holistic review of how best to update our data and offer interested parties additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This

file is available on the CMS website under downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

For this rulemaking cycle, we are providing an additional impact table that includes a facility/non-facility breakout of payment changes. The following is an explanation of the information represented in Table 105.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.
- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2022 utilization and CY 2023 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column D (Combined Impact): This column shows the estimated CY 2024 combined impact on total allowed charges.

2. CY 2024 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including family practice, endocrinology, nurse practitioner, physician assistant, clinical social worker, psychiatry, clinical psychologist, and general practice, reflect increases relative to other physician specialties. These increases can largely be attributed to proposed implementation of the separate payment for the O/O E/M visit inherent complexity add-on code, the Year 3 update to clinical labor pricing, and/or the proposed adjustment to certain behavioral health services.

Approximately 90 percent of the budget neutrality adjustment is attributable to the O/O E/M visit inherent complexity add-on code with all other proposed valuation changes making up the other

10 percent. The services that make up these specialties rely primarily on E/M services, behavioral health care, or on clinical labor for their practice expense costs. These increases are also due to increases in value for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from updates to supply and equipment pricing.

The estimated impacts for several specialties, including anesthesiology, interventional radiology, radiology, vascular and thoracic surgery, physical/occupational therapy, and audiologists reflect decreases in payments relative to payment to other physician specialties, largely resulting from the redistributive effects of the implementation of separate payment for the O/O E/M visit inherent complexity add-on code, the Year 3 update to clinical labor pricing, and/or the proposed adjustment to certain behavioral health services. The services that make up these specialties were negatively affected by the redistributive effects of increases in work RVUs for other codes, and/or rely primarily on supply/equipment items for their practice expense costs and therefore were affected negatively by the updated Year 3 clinical labor pricing under budget neutrality. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 104), including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level,

typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 104 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty.

As discussed above, we have reviewed our suite of public use files and have worked on new ways to offer interested parties additional information that addresses some of the concerns raised about lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2022 utilization data, Total RVUs change between -1 percent and 1 percent for more than 15 percent of practitioners, representing approximately 26 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Specialties, such as gastroenterology, exhibit little variation in changes in total RVUs per practitioner. Table 104 (CY 2024 PFS Estimated Impact on Total Allowed Charges by Specialty) indicates an overall change of 0 percent for this specialty, and the practitioner-level distribution shows that 89 percent of these practitioners will experience a change in Total RVUs between -2 percent and 2 percent. The specific service mix within a specialty may vary by practitioner, so individual practitioners may experience different changes in total RVUs. For example, Table 104 indicates a 1 percent increase in RVUs for the internal medicine specialty as a whole, however, 49 percent of internal medicine specialty practitioners—representing over 41 percent of Total RVUs for the specialty—will experience a 1 percent or more decrease in Total RVUs. Meanwhile, 40 percent of internal medicine specialty practitioners will experience 2 percent or more increases in Total RVUs, and these practitioners account for a similar 41 of Total RVUs for this specialty. We also

note the code level RVU changes are available in the Addendum B public use file that we make available with each rule.

The specialty impacts displayed in Table 104 reflect changes that take place within the pool of total RVUs. The specialty impacts table therefore includes any changes in spending which result from finalized policies within BN (such as the updated proposals associated with the complexity add-on code G2211 in CY 2024 or the clinical labor pricing update that began in CY 2022) but does not include any changes in spending which result from finalized policies that are not subject to BN adjustment, and therefore, have a neutral impact across all specialties. The 2.50 and 1.25 percent payment supplements for CY 2023 and CY 2024, respectively, are statutory changes that take place outside of BN, and therefore, are not captured in the specialty impacts displayed in Table 104.

b. Impact

Column F of Table 104 displays the estimated CY 2024 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2024 PFS proposed rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

3. Health Equity

Advancing health equity is the first pillar of CMS’s 2022 Strategic Framework.³³⁹ As part of our efforts to gain insight into how the PFS policies could affect health equity, we are

³³⁹ Available at <https://www.cms.gov/files/document/2022-cms-strategic-framework.pdf>.

considering adding elements to our impact analysis which would detail how policies impact particular patient populations. Patient populations that have been disadvantaged or underserved by the healthcare system may include patients with the following characteristics, among others: members of racial and ethnic minorities; members of federally recognized Tribes, people with disabilities; members of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; individuals with limited English proficiency, members of rural communities, and persons otherwise adversely affected by persistent poverty or inequality.

In the FY 2024 IPPS/LTCH PPS proposed rule, (88 FR 27261 through 27266), we included a table that details providers in terms of the beneficiaries they serve, as well as differences in estimated average payments per case and changes in estimated average payments per case relative to other providers. Because we do not have data for all characteristics that may identify disadvantaged or underserved patient populations, we use several proxies to capture these characteristics, including elements from claims data and Medicare enrollment data. The characteristics included in the table in the IPPS/LTCH PPS proposed rule, described in further detail below, include race/ethnicity, dual eligibility for Medicaid and Medicare, Medicare low income subsidy (LIS) enrollment, a joint indicator for dual or LIS enrollment, presence of an ICD-10-CM Z code indicating a “social determinant of health” (SDOH), presence of a behavioral health diagnosis code, receiving end-stage renal disease (ESRD) Medicare coverage, qualifying for Medicare due to disability, living in a rural area, and living in an area with an area deprivation index (ADI) greater than or equal to 85.

a. Race and Ethnicity

The first health equity-relevant grouping is race/ethnicity. To assign the race/ethnicity variables, we utilized the Medicare Bayesian Improved Surname Geocoding (MBISG) data in conjunction with the claims data. The method used to develop the MBISG data involves estimating a set of six racial and ethnic probabilities (White, Black, Hispanic, American Indian

or Alaska Native, Asian or Pacific Islander, and multiracial) from the surname and address of beneficiaries by using previous self-reported data from a national survey of Medicare beneficiaries, post-stratified to CMS enrollment files. The MBISG method is used by the CMS Office of Minority Health in its reports analyzing Medicare Advantage plan performance on Healthcare Effectiveness Data and Information Set (HEDIS) measures, and is being considered by CMS for use in other CMS programs. In the 2024 IPPS/LTCH proposed rule (88 FR 27261 through 27266), we estimated the percentage of discharges for each specified racial/ethnic category for each hospital by taking, the sum of the probabilities for that category for that hospital and dividing by the hospital's total number of discharges.

b. Income

The two main proxies for income available in the Medicare claims and enrollment data are dual eligibility for Medicare and Medicaid and Medicare LIS status. Dual-enrollment status is a powerful predictor of poor outcomes on some quality and resource use measures even after accounting for additional social and functional risk factors.³⁴⁰ Medicare LIS enrollment refers to a beneficiary's enrollment in the low-income subsidy program for the Part D prescription drug benefit. This program covers all or part of the Part D premium for qualifying Medicare beneficiaries and gives them access to reduced copays for Part D drugs. (We note that beginning on January 1, 2024, eligibility for the full low-income subsidy will be expanded to include individuals currently eligible for the partial low-income subsidy.) Because Medicaid eligibility rules and benefits vary by State/territory, Medicare LIS enrollment identifies beneficiaries who are likely to have low income but may not be eligible for Medicaid. Not all beneficiaries who qualify for the duals or LIS programs actually enroll. Due to differences in the dual eligibility and LIS qualification criteria and less than complete participation in these programs, sometimes

³⁴⁰ https://aspe.hhs.gov/sites/default/files/migrated_legacy_files//195046/Social-Risk-in-Medicare%E2%80%99s-VBP-2nd-Report-Executive-Summary.pdf.

beneficiaries were flagged as dual but not LIS or vice versa. Hence this analysis also used a “dual or LIS” flag as a third proxy for low income. The dual and LIS flags were constructed based on enrollment/eligibility status in the CMS Chronic Conditions Data Warehouse (CCW) during the month of the hospital discharge.

c. Social Determinants of Health (SDOH)

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.³⁴¹ These circumstances or determinants influence an individual’s health status and can contribute to wide health disparities and inequities. ICD-10-CM contains Z-codes that describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation. The presence of ICD-10-CM Z-codes in the range Z55-Z65 identifies beneficiaries with these SDOH characteristics. The SDOH flag used for this analysis was turned on if one of these Z-codes was recorded on the claim for the physician service itself (that is, the beneficiary’s prior claims were not examined for additional Z-codes). Analysis of Z-codes in Medicare claims data from 2019 suggests that Z-codes are used inconsistently across provider types and population groups, and are generally underreported.³⁴² Therefore, we believe Z-codes do not reflect the actual rates of SDOH.

d. Behavioral Health

³⁴¹ Available at: <https://health.gov/healthypeople/priority-areas/social-determinants-health>.

³⁴² Maksut JL, Hodge C, Van CD, Razmi, A, & Khau MT. Utilization of Z Codes for Social Determinants of Health among Medicare Fee-For-Service Beneficiaries, 2019. Office of Minority Health (OMH) Data Highlight No. 24. Centers for Medicare and Medicaid Services (CMS), Baltimore, MD, 2021. Available at <https://www.cms.gov/files/document/z-codes-data-highlight.pdf>.

Beneficiaries with behavioral health diagnoses often face co-occurring physical illnesses, but often experience difficulty accessing care.³⁴³ The combination of physical and behavioral health conditions can exacerbate both conditions and result in poorer outcomes than one condition alone.³⁴⁴ Additionally, the intersection of behavioral health and health inequities is a core aspect of CMS' Behavioral Health Strategy.³⁴⁵ We used the presence of one or more ICD-10-CM codes in the range of F01- F99 to identify beneficiaries with a behavioral health diagnosis.

e. Disability

Individuals under age 65 who are determined eligible for social security disability benefits may also be eligible for Medicare coverage.³⁴⁶ Individuals may qualify for social security disability benefits on the basis of a medically determinable physical or mental impairment(s) that has lasted or is expected to last for a continuous period of at least 12 months or is expected to result in death³⁴⁷. Disabled beneficiaries often have complex healthcare needs and difficulty accessing care. Compared to people without disabilities, people with disabilities generally have less access to health care, have more depression and anxiety, engage more often in risky health behaviors such as smoking, and are less physically active.³⁴⁸ Beneficiaries were classified as disabled for the purposes of this analysis if their original reason for qualifying for Medicare was disability; this information was obtained from Medicare's CCW enrollment data. We note that this is likely an underestimation of disability, because it does not account for beneficiaries who became disabled after becoming entitled to Medicare.

³⁴³ Viron M, Zioto K, Schweitzer J, Levine G. Behavioral Health Homes: an opportunity to address healthcare inequities in people with serious mental illness. *Asian J Psychiatr*. 2014 Aug;10:10-6. doi: 10.1016/j.ajp.2014.03.009.

³⁴⁶ Medicare eligibility on the basis of disability is discussed in 42 CFR § 406.12.

³⁴⁷ <https://www.ssa.gov/disability/professionals/bluebook/general-info.htm>.

³⁴⁸ <https://www.cdc.gov/ncbddd/humandevlopment/health-equity.html#ref>.

f. End-Stage Renal Disease (ESRD)

Beneficiaries with ESRD have high healthcare needs and high medical spending, and often experience comorbid conditions and poor mental health. Beneficiaries with ESRD also experience significant disparities, such as a limited life expectancy³⁴⁹. Beneficiaries were classified as ESRD for the purposes of this analysis if they were receiving Medicare ESRD coverage during the month of the discharge; this information was obtained from the CCW enrollment data.

g. Geography

Beneficiaries in some geographic areas – particularly rural areas or areas with concentrated poverty – often have difficulty accessing care.^{350,351} For this analysis, beneficiaries were classified on two dimensions: from a rural area and from an area with an area deprivation index (ADI) greater than or equal to 85.

Rural status is defined for purposes of this analysis using the primary Rural-Urban Commuting Area (RUCA) codes 4 – 10 (including micropolitan, small town, and rural areas) corresponding to each beneficiary's zip code. RUCA codes are defined at the census tract level based on measures of population density, urbanization, and daily commuting. The ADI is obtained from a publicly available dataset designed to capture socioeconomic disadvantage at the neighborhood level³⁵². It utilizes data on income, education, employment, housing quality, and 13 other factors from the American Community Survey (ACS) and combines them into a single raw score, which is then used to rank neighborhoods (defined at various levels), with higher scores reflecting

³⁵² <https://www.neighborhoodatlas.medicine.wisc.edu/>.

greater deprivation. The version of the ADI used for this analysis is at the Census Block Group level and the ADI corresponds to the Census Block Group's percentile nationally. Living in an area with an ADI score of 85 or above, a validated measure of neighborhood disadvantage, is shown to be a predictor of 30-day readmission rates, lower rates of cancer survival, poor end of life care for patients with heart failure, and longer lengths of stay and fewer home discharges post-knee surgery even after accounting for individual social and economic risk factors.^{353,354,355,356,357} The MedPAR discharge data was linked to the ADI data available in the CCW. Beneficiaries with no recorded ADI were treated as being from an urban area and as having an ADI less than 85.

In examining how we might expand our PFS impact analysis, we considered what framework might accurately provide insight into the relationship between PFS policies and health equity. Rather than examining changes in estimated average payments, we believe that illuminating the baseline is a necessary first step toward advancing our goal of measuring the impact of PFS policies on health equity. Table 107 displays the share of utilization for each of the health-equity relevant characteristics listed above. First, we list the share of enrollees with each characteristic. Next, we list the share of utilization by beneficiaries (that is, enrollees with at

least one claim for a physician service in CY 2022) with each characteristic by provider specialty. The information contained in Table 107 is provided solely to demonstrate beneficiary utilization of services by provider specialty impact across a number of health equity dimensions and does not form the basis or rationale for the proposed policies.

In consideration of the differences between IPPS/LTCH and the PFS discussed below, we are seeking comment from interested parties about how we might structure a PFS impact analysis that addresses these and other considerations to examine how changes in the PFS would impact beneficiaries of particular groups. We are also seeking comment about how such a framework would allow us to consider developing policies that enhance health equity under our existing statutory authority. We welcome suggestions about alternative measures of health equity in our impact analysis, in particular with regard to the ADI as a proxy for disparities related to geographic variation. Finally, we seek feedback about additional categories beyond those described previously that should be considered in our analysis, along with potential data sources.

Nature of a service. In the table that details providers in terms of the beneficiaries they serve in the IPPS/LTCH PPS proposed rule, the unit of measurement we used was a hospital discharge. A discharge includes all resources involved in the hospital's caring for a beneficiary during the hospital stay. There is no parallel construct under the PFS. While the resources involved in furnishing a given discharge can and do vary under the IPPS, a discharge consists of a somewhat predictable set of resources that occur across a number of cost centers. On the other hand, a service unit under the PFS can range from very discrete services, such as a single pulse oximetry measurement (CPT code 94760) with total RVUs of 0.07 to complex services that include several visits during a global period, such as a liver transplant (CPT code 47135) with total RVUs of 160.44. As an illustration, based on the MS-DRGs reported in the claims data, the standard deviation of the mean IPPS relative weight is of similar magnitude to the mean. In

contrast, based on the PFS services reported in the claims data, the standard deviation of the mean PFS RVU service is vastly larger than the mean.

TABLE 106: Differences in Claim-level Relative Weights between IPPS and PFS

	IPPS Relative Weight ³⁵⁸ on claim	PFS RVU on claim
Mean	1.95	2.62
Standard Deviation	1.72	1,241

In addition, under the PFS, some services furnished during a single encounter are billed in multiple units. These services could range from allergy testing (CPT codes 95004 through 95078) to anesthesia services (CPT codes 00100 through 01860). The average total RVUs for services billed in multiple units are not comparable to services billed in a single unit per encounter.

Number of practitioners serving a beneficiary and associated spending. Under the IPPS, most beneficiaries who had one or more IPPS claims during fiscal year 2022 were served by 1 or 2 providers, which accounts for most of the spending under the IPPS. The share of beneficiaries served by a given number of providers is consistent with the share of spending incurred for these discharges. Less than 10 percent of beneficiaries were served by 5 or more providers. Under the PFS, during CY 2022, most beneficiaries with one or more PFS claims saw 5 or more practitioners. In contrast to the pattern under the IPPS, PFS spending for beneficiaries who saw 10 or more practitioners accounted for a disproportionate share of total spending. Under the IPPS, examining providers in terms of beneficiary characteristics reflects the care of most beneficiaries with one or more discharges under the IPPS. Under the PFS, the same framework would be mostly describing the forty percent of beneficiaries with one or more PFS services who account for close to 80 percent of total spending.

³⁵⁸ The IPPS relative weights are not fully comparable to PFS RVUs because IPPS payments may include outliers. Even considering outliers, however, the standard deviation on IPPS payments is only slightly higher relative to the mean(\$17,104+/- \$21,825).

Utilization of services by beneficiary characteristic. As shown in Table 107, the specialty-level services utilized by beneficiaries with particular characteristics varies widely. Beneficiaries with the characteristics in Table 107 do not access services consistent with the share of enrollees with that characteristic. As a result, comparing across deciles, for example, of practitioners serving beneficiaries of one race, would often be comparing very different service mixes. How discrete a service is, the setting it is furnished in, and the associated inputs may result in services that have very different baseline allowed charges.

A significant body of literature has examined the reasons for differential access to physician services by beneficiary characteristic. Some of the explanations of the differential utilization of services include:

- Patient preferences and willingness to undergo procedures, such as due to decreased belief in treatment efficacy and concerns about surgical risks^{359,360,361,362}
- Geographic location: specialists and sub-specialists are sometimes clustered in urban areas due to higher demand for services³⁶³
- Differences in referral patterns³⁶⁴ from primary care physicians and following hospitalizations

D. Impact of Proposed Changes Related to Telehealth Services

We are proposing to implement the provisions of the CAA, 2023 that amended section 1834(m) of the Act) to extend the application of certain Medicare telehealth flexibilities through December 31, 2024, including allowing Medicare telehealth services to be furnished to patients located anywhere within the U.S.; continuing the expanded scope of telehealth practitioners to include occupational therapists, physical therapists, speech-language pathologists, and audiologists; extending payment for telehealth services furnished by FQHCs and RHCs; and delaying the requirement that there be an in-person visit with the physician or practitioner within 6 months before an initial mental health telehealth service.

In this proposed rule, we are proposing a refined process for considering requests received for addition of services to the Medicare Telehealth Services List, which would include a decision on whether the services should be proposed for inclusion on the list on either a permanent or provisional basis. Because the underlying criteria for adding services to the Medicare Telehealth Services List are not changing, we do not expect this proposal to have an impact on the utilization of Medicare Telehealth services beginning in CY 2024 but we will continue to monitor utilization of these services. We are proposing that, beginning in CY 2024, claims billed with POS 10 (Telehealth Provided in Patient's Home) would be paid at the non-facility PFS rate. Claims billed with POS 02 (Telehealth Provided Other than in Patient's Home) will continue to be paid at the PFS facility rate. As we are currently paying for the majority of services that will be billed with POS 10 at the PFS non-facility rate under the PHE-specific policy of paying the place of service code had the service been furnished in person, we believe that these services furnished via telehealth will largely be paid as they are currently. Therefore, we believe the impact of this proposal will roughly neutral even if utilization remains at current levels for these services. We anticipate that these provisions will result in continued utilization

of Medicare telehealth services during CY 2024 at levels comparable to observed utilization of these services during the PHE for COVID-19.

E. Other Provisions of the Regulation

1. Impact of Proposals for Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Medical Services

In section II.K.2. of this proposed rule, we are: (1) proposing to allow payment for dental examinations, diagnostic, and treatment services prior to and during certain treatments for cancer (chemotherapy and CAR-T cell therapy); (2) proposing to allow payment for dental examinations, diagnostic, and treatment services prior to and during antiresorptive and/or antiangiogenic drug therapy associated with the treatment for cancer; and (3) requesting comments on other types of cardiovascular interventions (analogous to cardiac valve replacements and valvuloplasty procedures) where dental services may be inextricably linked to, and substantially related and integral to the clinical success of, other cardiovascular covered medical services.

If we were to finalize the proposal that Medicare Part A and Part B payment can be made for oral or dental examination, and necessary treatment, performed prior to and during certain cancer treatments or drug therapies associated with managing cancer related care, we do not anticipate any significant increase in utilization or payment impact for additional dental services given the historically low utilization of these therapies. Although, we acknowledge that the observed utilization of these services might have been low because of the size of the population of patients whose treatment would include such dental services and also because the dental services have been viewed as subject to the payment preclusion under section 1862(a)(12).

Based on an analysis of 2018-2022 incurred claims experience, we estimate that there are potentially 155,000 additional beneficiaries who might receive dental services for which Medicare payment could be made, relative to the current number of beneficiaries that received

dental services. These are beneficiaries who would receive any of the treatments identified in our proposals for CY 2024 (that is, chemotherapy/CAR T/bone-modifying agent therapies used in the treatment of cancer) who would likely require dental services, and could utilize dental services for which services Medicare could pay in CY 2024, if these proposals are finalized. The estimated average cost for these additional dental services is about \$525 per person. This assumption is based on an analysis of 2019 incurred claims, but we believe results using more recent data would not be likely to change, due to the limited claims involving these services. Based on this same analysis, the effective rate of coverage was less than 0.2 percent. We do acknowledge that the actual take-up rate of services could be higher due to the proposed additional examples of medical services to which dental services are inextricably linked, which may raise awareness that payment is available. Therefore, we prepared impact estimates under the utilization assumptions of 0.2 percent and between 1-3 percent. We then applied these utilization ratios to estimate projected payments for dental exams and treatments in connection with cancer therapies. We found that the estimated yearly impact beginning in CY 2024 to be roughly \$162,000 per year with a 0.2 percent utilization assumption, and roughly \$800,000 to 2 million per year for the utilization assumptions of 1-3 percent. Therefore, we do not anticipate a significant payment impact for these provisions. We note, however, that if we were to finalize, as discussed in section II.K. of this proposed rule, payment in other clinical scenarios for dental services inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services, we may adjust this estimate for the final rule.

We continue to believe that because we are updating existing Medicare payment policies by proposing additional examples of clinical scenarios where dental services are inextricably linked to covered medical services, as stated in the CY 2023 PFS final rule, it is not appropriate to incorporate these budget neutrality adjustments into the conversion factor. Additionally, while the impact of access to these services to some individuals enrolled in Medicare could be very

significant, we do not anticipate a significant impact in the context of overall spending and utilization under the PFS nor do we anticipate significant utilization and spending impact of these policies finalized in section II.K.2. of this proposed rule.

We acknowledge that the actual take-up rate of services could be higher than the utilization assumptions included within our current estimates. We continue to be open to updating and conducting further impact analysis once we have additional data and input from interested parties.

2. Impact of Proposal to Implement Separate Payment for the Office/Outpatient (O/O) E/M Visit Inherent Complexity Add-on Code (HCPCS G2211)

In recent years, the AMA's CPT Editorial Committee has restructured the E/M visit code sets largely to acknowledge changes in medical practice. The AMA RUC has reviewed and provided us recommendations for the revised E/M visit code sets in the context of the generally recognized need to better recognize resources involved in furnishing different types of services within the broader PFS. While we adopted the RUC-recommended values for the O/O E/M visit code family in the CY 2021 final rule, recognizing that those values generally reflect the resources involved in furnishing those services, we did not believe those valuations appropriately reflected the resource costs involved in furnishing primary and other similarly longitudinal medical care for a serious or complex condition in office settings. To address this concern, effective beginning in CY 2021, we finalized an add-on code to separately pay for visit complexity inherent to O/O E/M visits for primary care and other medical care services that are part of ongoing care related to a patient's single, serious, or complex condition in the office setting (the O/O E/M visit inherent complexity add-on). After we finalized the CY 2021 payment changes for O/O E/M visits, in the CAA of 2021, Congress imposed a statutory moratorium on Medicare payment for the O/O E/M visit inherent complexity add-on code until January 1, 2024.

We propose to implement payment for the O/O E/M visit inherent complexity add-on, HCPCS code G2211, with significant refinements to target improved payment for primary and other similar longitudinal care for serious or complex conditions. Specifically, we are proposing that the O/O E/M visit complexity add-on code cannot be billed with visits reported using Modifier 25 which is used to indicate that the service is billed on the same day as a minor procedure or another E/M visit. (Previously, in the CY 2021 final rule, we stated we would not expect such billing; but as there was no explicit prohibition, these visits were included in the budget neutrality adjustment (85 FR 84572)). We also propose to set PFS rates with a refined, more specific utilization assumption that better recognizes likely uptake of the code, differential use among specialties, and new and established patient visits, among other changes. These refined assumptions were developed, taking into consideration perspectives and information provided by interested parties. The resulting estimate reflects that the O/O E/M visit inherent complexity add-on code would likely be reported with approximately 38 percent of all O/O E/M visits for CY 2024. As discussed previously and shown below, we estimate the specific portion of the total budget neutrality adjustment attributable to the proposal to make payment for the O/O E/M inherent complexity add-on code to be approximately 2.00 percent compared to an attributable budget neutrality adjustment of 3.20 percent as calculated in CY 2021 rulemaking.

3. Advancing Access to Behavioral Health

a. Impact of Proposed Payment for Marriage and Family Therapist (MFT) Services and Mental Health Counselor (MHC) Services

As discussed in section II.J. of this proposed rule, section 4121 of CAA, 2023 added section 1861(s)(2)(II) to establish a new Medicare benefit category for MFT services and MHC services furnished and billed by MFTs and MHCs, respectively. MFT and MHC services are defined in section 1861(III)(2) and 1861(III)(4), respectively, as services for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital). An

MFT or MHC is defined as an individual who possesses a master's or doctor's degree, is licensed or certified by the State in which they furnish services, who has performed at least 2 years of clinical supervised experience, and meets other requirements as the Secretary determines appropriate. Section 1833(a)(1)(FF) of the statute requires that MFT and MHC services be paid at 75 percent of the amount determined for payment of a clinical psychologist. MFT and MHC services are excluded from consolidated billing requirements under the skilled nursing facility prospective payment system. Services furnished by an MFT and MHC are covered when furnished in a rural health clinic and federally qualified health center. In addition, the hospice interdisciplinary team is required to include at least one social worker, MFT or MHC. Expenditures associated with payment for services furnished by MFTs and MHCs in CY 2024 will be incorporated into budget neutrality for PFS ratesetting in future years.

4. Drugs and Biological Products Paid Under Medicare Part B

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023 final rule, we finalized several policies to implement the provision, including: reporting requirements for the JW and JZ modifiers; the date upon which we will begin to edit claims for appropriate use of the JW and JZ modifiers, October 1, 2023; the definition of “refundable single-dose container or single-use package drug”; the manner in which refund amounts will be calculated; the annual basis we will send reports to manufacturers; the dispute resolution process; and enforcement

provisions. In section III.A of this proposed rule, we are proposing the date of the initial report to manufacturers, the date for subsequent reports, method of calculation when there are multiple manufacturers for a refundable drug, increased applicable percentages for drugs with unique circumstances, and a future application process by which manufacturers may apply for an increased applicable percentage for a drug.

For this proposed rule, we reanalyzed JW modifier data from 2021 as if the data represented dates of service on or after the effective date of section 90004 of the Infrastructure Act (that is, January 1, 2023).³⁶⁸ That is, to assess if there was a change in the status of the billing and payment codes that were identified in the proposed rule as met the definition of refundable single-dose container or single-use package drug and have 10 percent or more discarded units, except for five drugs with higher applicable percentages finalized in the CY 2023 final rule or as proposed under this proposed rule.

Overall in the 2021 calendar year, Medicare paid nearly \$1.56 billion for discarded amounts of drugs from a single-dose container or single-use package paid under Part B. In that year, there were 51 billing and payment codes with 10 percent or more discarded units based on JW modifier data. Of these, 11 did not meet the definition of refundable single-dose container or single-use package drug in section 1847A(h)(8) of the Act because they are multiple source drug codes; 5 were excluded from the definition of refundable single-dose container or single-use package drug (as specified in section 1847A(h)(8)(B) of the Act) because they are identified as radiopharmaceuticals or imaging agents in FDA-approved labeling; and 3 are products referred to as skin substitutes, which were removed because we anticipate making changes to coding and payment policies regarding those products in future rulemaking. After these exclusions, there were 31 billing and payment codes that met the definition of refundable single-dose container or

³⁶⁸ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>.

single-use package drug and have discarded units above the relevant finalized applicable percentage. Of these, three have discarded units that would fall below increased applicable percentages proposed in this proposed rule.

We estimated refund amounts as described in section 1847A(h)(3) of the Act were calculated based on this data by subtracting the percent units discarded by 10 percent (the applicable percentage), except for drugs with higher applicable percentages finalized in the CY 2023 final rule or as proposed under this proposed rule. Then, we multiplied the appropriate percentage by the CY 2021 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. Based on this data, there would be approximately \$83.1 million in refunds due from manufacturers for the calendar year of 2021 (\$20.8 million each calendar quarter). See Table 108.

TABLE 108: Estimated Refund Amounts Based on CY 2021 JW Modifier Data³⁶⁹

					TOTAL	\$82,883,368.59	\$20,720,842.15

There are several limitations to this analysis that could substantially affect the total quarterly refund. Since new drugs are continually being approved, this estimate does not consider newer drugs that will meet the definition of refundable single-dose container or single-use package drug on or after the effective date of January 1, 2023. Since section 1847A(h)(8)(B)(iii) of the Act excludes drugs approved by FDA on or after November 15, 2021 and for which payment has been made under Part B for fewer than 18 months from this definition, we expect an impact on refund amounts after the 18-month exclusion has ended if the drug otherwise meets the definition. We also note that this estimate is based on CY 2021 data for discarded drug amounts, which, for reasons discussed in the CY 2023 final rule (87 FR 69716), we believe to be an underestimate due to the frequent omission of the JW modifier. Once we begin to edit claims for both the JW and JZ modifiers, reported discarded drug amounts will likely increase. Other substantial changes to this estimate may occur if a billing and payment code no longer meets this definition. For example, if a generic version of one of these drugs is marketed, the billing and payment code will become a multiple source drug code and will no longer meet the definition of refundable single-dose container or single-use package drug. Subsequently, the manufacturers will not be responsible for refunds under this provision. There may be changes in the percent discarded units for a given refundable single-dose container or single-use package drug if the manufacturer introduces additional vial sizes or modifies the vial size to reduce the amount discarded. Lastly, since data from the CMS website only includes billing and payment codes on the ASP drug pricing file³⁷⁰ and implementation of section 90004 of the Infrastructure Act is not restricted to billing and payment codes included on the file, there may be other applicable data that was not assessed as part of this estimate.

a. Impacts Related to the Issuance of the Initial Report

³⁷⁰ <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice>.

In section III.A.3.b. of this proposed rule, we propose to issue the initial refund report to manufacturers, to include all calendar quarters for 2023, no later than December 31, 2024. Accordingly, as discussed in section III.A.3.c., we propose to require that the refund amounts specified in the initial refund report be paid no later than February 28, 2025, except in circumstances where a report is under dispute.

Delaying the receipt of the rebate, that is in 2025 instead of 2024, only represents a cost to the extent the SMI trust fund receives less interest revenue. Only a portion of SMI trust fund revenue ends up invested in the bond portfolio. Based on current SMI trust fund operation patterns a delay in rebate collection as described in the rule would represent a cost less than \$2 million dollars in any given year and therefore would be negligible to SMI trust fund operations.

b. Impacts Related to the Application for Consideration

As described in section VII.B.1. of this proposed rule, the information collection requirements, we estimate the annual burden per applicant to be 5 hours. If we anticipate no more than 25 applications per year, the total annual drafting and submitting burden would be 125 hours (25 applications per year x 5 hours per applicant). We estimate an annual cost of this burden to be \$4,937.50 (\$39.50/hour x 125 hours).

5. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this proposed rule, we are proposing to include Remote Patient Monitoring (RPM) and Remote Therapeutic Monitoring (RTM) services, and the proposed Community Health Integration (CHI) and Principal Illness Navigation (PIN) services if finalized, in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Due to the growing number of services in the code, we are also proposing to revise the calculation for G0511 to include the weighted average of these services based on utilization under the PFS as this may provide a more complete and accurate payment amount.

In terms of estimated impacts to the Medicare program, expanding use of General Care Management HCPCS code G0511 to include RPM, RTM, CHI, and PIN may result in an increase in spending. Prior updates to G0511 have resulted in negligible increases.

6. RHC and FQHC CfC changes: Permitting MFTs and MHCs to furnish services

Section 4121 of the CAA, 2023 amends section 1861(aa)(1)(B) of the Act by adding MFTs and MHCs as eligible practitioners of RHCs and FQHCs beginning January 1, 2024. We are proposing regulation text changes to permit MFT and MHCs to provide services furnished at RHCs and FQHCs. These changes would include MFTs and MHCs as members of the staff who may be the owner or an employee of the clinic or center, or furnish services under contract to the clinic or center. Along with other permitted physicians and nonphysician practitioners, MFT and MHCs may be available to furnish patient care services at all times the clinic or center operates.

At § 491.9(b)(3) RHCs and FQHCs must have patient care policies that include: (1) a description of the services the clinic or center furnishes directly or through agreement or arrangement; (2) guidelines for medical management of health problems; and (3) rules for storage, handling, and administration of drugs and biologicals. Additionally, § 491.9(b)(4) states that the RHC and FQHC patient policies must regularly be reviewed at least once every 2 years by a group of professional personnel that includes one or more physicians, one or more physician assistants (PAs) or nurse practitioners (NPs), and at least one person who is not a member of the clinic or center staff. If an RHC or FQHC provides services furnished by an MHC or MFT they must update their patient care policies with a description of the services they will provide.

The most recently published collection of information for RHCs and FQHCs (OMB control number 0938-0334), estimates that an annual review of the patient care policies may take approximately 2 hours. Therefore, we assume, it would take each medical professional (at least one physician and at least one PA or NP) 1 hour to review all policies and procedures, annually. Based on the prior analysis, we estimate it will take 15 minutes to add the description of MFT

and MHC services. We also assume that only half of the RHCs and half of the FQHCs would have this burden applied to them, for a total burden estimate of \$361,891.05. We note that there would be variations in how many clinics or centers employ or contract with an MFT and MHC based on their ability to expand their services. We also recognize that some RHCs and FQHCs may already provide these services as some States provide reimbursement under the Medicaid program; however, we do not know the exact number of clinics or centers that already have these practitioners on staff and would not incur the burden.

While this proposed rule does have a 1-time burden, there is evidence to suggest there are long-term financial savings in integrating mental health in medical care. Effectively integrating mental and medical care can save upwards of \$52 billion annually due to the existing Medicare mental health coverage gap.³⁷¹ Though this total encompasses all facility types, expanding access to MFT and MHC services in RHCs and FQHCs will have individual and societal cost savings. Older adults with mental health conditions have poorer health outcomes, higher hospitalization rates, and emergency room visits.³⁷² While there is an increasing need for mental health services, one barrier to effective treatment is access to mental health services.³⁷³ Ensuring access to mental health care in rural communities is challenging as there are fewer mental health providers per capita in nonmetropolitan counties.³⁷⁴ This coincides with HRSA's second quarter of the fiscal year 2023 designated health professional shortage area (HPSA) quarterly summary, which breaks down the number of HPSAs by primary medical care, dental, and mental health HPSAs based on four categories (rural, non-rural, partial rural, and unknown); and as population HPSAs, geographic HPSAs, or Facility HPSAs. The report does not provide accumulative

³⁷¹ https://onlinelibrary.wiley.com/doi/full/10.1002/jcad.12409?casa_token=z412GCn3OuYAAAAA%3AHO3p-cHeiVrLww0dZjTkIcuCbwMxvYtRUo4aj8AwB-tq2w_ZJV11gGpWW-oxilDK3awU0xIc2XKMnKhtAQ#jcad12409-bib-0003.

³⁷² https://onlinelibrary.wiley.com/doi/full/10.1002/jcad.12409?casa_token=z412GCn3OuYAAAAA%3AHO3p-cHeiVrLww0dZjTkIcuCbwMxvYtRUo4aj8AwB-tq2w_ZJV11gGpWW-oxilDK3awU0xIc2XKMnKhtAQ#jcad12409-bib-0005.

³⁷³ <https://psycnet.apa.org/fulltext/2020-75725-002.html>.

³⁷⁴ <https://psycnet.apa.org/record/2018-25164-007>.

HPSAs by the four categories.³⁷⁵ Approximately 65 percent of federally designated health professional shortage areas are located in rural areas, and about 30 percent are located in non-rural areas.³⁷⁶ The shortage of professionals in rural areas is severe, and the shortage of qualified professionals in combination with geographic limitations only exacerbates the mental health crisis in older adults.³⁷⁷ While there are disparities in the availability of the behavioral workforce between rural and nonrural areas, counselors are integral to providing care in rural areas.³⁷⁸

7. Clinical Laboratory Fee Schedule

In section III.D of this proposed rule, we discuss statutory revisions to the data reporting period and phase-in of payment reductions under the CLFS. In accordance with section 4114 of the CAA, 2023, we are proposing certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for CDLTs that are not ADLTs, we are proposing to update certain definitions and revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 2024. The CAA, 2023 delays the next data reporting period under the CLFS for CDLTs that are not ADLTs by 1 year, that is, it requires the next data reporting period for these tests to take place during the period of January 1, 2024 through March 31, 2024. Subsequently, the next private payor rate-based CLFS update for these tests will be effective January 1, 2025, instead of January 1, 2024. In addition, we are proposing to make conforming changes to our requirements for the phase-in of payment reductions to reflect the CAA, 2023 amendments. Specifically, we are proposing to revise § 414.507(d) to indicate that for CY 2023, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2022, and for CYs 2024 through 2026, payment may not be reduced by more than 15 percent as compared to the amount

³⁷⁵ <https://data.hrsa.gov/topics/health-workforce/shortage-areas>.

³⁷⁶ <https://data.hrsa.gov/Default/GenerateHPSAQuarterlyReport>.

³⁷⁷ <https://psycnet.apa.org/fulltext/2020-75725-002.html>.

³⁷⁸ chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://depts.washington.edu/fammed/rhrc/wp-content/uploads/sites/4/2016/09/RHRC_DB160_Larson.pdf.

established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the first data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017 through March 31, 2017). In addition, as discussed in section III.D. of this proposed rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill. As such, the CAA, 2023 amendments to the data reporting period will delay using updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to unforeseen changes in private payor rates due to shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor rates, it is uncertain whether the delay in data reporting will result in a measurable budgetary impact. In other words, to assess the impact of delayed reporting and subsequent implementation of updated CLFS rates, we will need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories, and calculating the updated CLFS rates.

Regarding the conforming changes to our requirements for the phase-in of payment reductions that we are proposing in this rule, we note that for CYs 2024 through 2026, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. Based on data reported in the 2017 data collection period, we estimate 14.8 percent (191) of tests on the CLFS may be subject to the full 15 percent phase-in reduction in CY 2024.

8. Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR) Expansion of Supervising Practitioners

As discussed in section III.E. of this proposed rule, we are proposing revisions to §§ 410.47 (PR) and 410.49 (CR/ICR) to codify the statutory changes made in section 51008 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123, enacted February 9, 2018) (BBA of 2018) which permit other specific types of practitioners to supervise these services effective January 1, 2024. The amendments add to the types of practitioners who may supervise PR, CR and ICR programs to also include a physician assistant (PA), nurse practitioner (NP) or clinical nurse specialist (CNS). Accordingly, we are proposing additions and revisions to the PR and CR/ICR regulations to reflect these statutory amendments.

To assess the potential impact from expanding the types of practitioners that may supervise PR/CR/ICR we searched the literature for articles that evaluated the utilization rates of PR, CR and ICR to determine the historical utilization trends of these services as well as known barriers to utilization. Based on historical utilization trends as well as barriers to utilization discussed in the literature, we do not expect the proposed changes to make a significant impact on the Medicare program.

Nishi et al. (2016) investigated the number of Medicare beneficiaries with COPD who received PR from January 1, 2003, to December 31, 2012. Their results included both individuals who had experienced hospitalizations for COPD and those who were outpatients only. The number of unique patients with COPD who initially participated in PR during the study period was 2.6 percent in 2003 (before conditions of coverage at § 410.47 were established) and 2.88 percent in 2012 (after conditions of coverage at § 410.47 were established).³⁷⁹ In 2019, *Spitzer, et al.* published an article based on Medicare claims data from 2012, finding that 2.7 percent of

eligible Medicare beneficiaries received PR within 12 months of hospitalization with COPD.³⁸⁰ Using claims data from fee-for-service Medicare beneficiaries hospitalized for COPD in 2014, *Lindenauer et al.* (2020) reported that only 3 percent initiated PR within 1 year of their hospital discharge.³⁸¹ Taken together, this data informs us that utilization of PR in the Medicare population is very low.

Million Hearts® 2027, a national initiative co-led by the Centers for Disease Control and Prevention (CDC) and CMS to prevent 1 million preventable cardiovascular disease (CVD) events in the next 5 years³⁸², includes a goal of increasing use of CR and states that CR participation rates remain low, ranging from 19 percent to 34 percent.³⁸³ Fleg and colleagues (2020) report that less than 25 percent “of eligible patients participate in CR” with a smaller proportion completing 36 sessions as recommended.³⁸⁴ In their 2022 article, Varghese and colleagues state that less than 30 percent of eligible patients participate in CR in the United States.³⁸⁵ *Husaini and colleagues* (2022) analyzed a sample of Medicare fee-for-service claims between 2012 and 2016 and reported that within 1 year of a qualifying event, 16 percent of patients completed one or more CR session and 0.1 percent of patients completed one or more ICR sessions. They observed an increase of combined CR and ICR utilization from 14 percent (patients with qualifying events in 2012) to 18 percent (patients with qualifying events in

2015).³⁸⁶ Taken together, this data informs us that utilization of CR and ICR is low, although not as low as PR.

Underutilization of PR, CR and ICR has been attributed to numerous factors as described by *Fleg et al.* “including a lack of referral or strong recommendation from a physician and inadequate follow-up or facilitation of enrollment after referral. Financial issues such as limited or absent health insurance coverage and the inability to afford copayments, even when insured, also limit CR/PR participation as do conflicting work and home responsibilities and distance and transportation difficulties. Social and cultural factors, including the lack of gender and racial diversity among CR/PR staff, language and cultural barriers, and lack of program availability and access are additional challenges... Many eligible patients are also commonly perceived as too frail...”³⁸⁷ *Husaini et al.* (2022) reinforce the impact of similar factors in CR underuse. They cite “lower reimbursements relative to cost and variability in access”, physician “skepticism over benefit and a primary emphasis on cardiac medications and procedures”, and patient “reluctance or inability to commit 3-6 hr/wk for 8-12 wk to CR, logistical (transportation, work, etc) or financial impediments, a preference for exercise/rehabilitation at home, fear of failure, and physical limitations.”³⁸⁸

While the expansion of supervision requirements to include nonphysician practitioners could offer greater flexibility for PR and CR programs to operate, the barriers to utilization as described by *Fleg and colleagues* (2020) and *Husiani and colleagues* (2022) are widespread and complex and low participation in PR, CR and ICR has remained steady for many years. We do

not believe the expansion of supervising practitioners is likely to address these barriers.

Therefore, we do not anticipate any significant increase in utilization of PR, CR and ICR services and subsequent impact to the Medicare program or interested parties.

9. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.F. of this proposed rule, we are proposing allowing periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary through the end of CY 2024, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and all other applicable requirements are met.

We believe the Part B cost impact of this flexibility for the use of telecommunications will be minimal because we do not expect that these flexibilities will increase the frequency with which medically necessary assessments are furnished.

10. Medicare Shared Savings Program

a. General Impacts

As of January 1, 2023, 10.9 million Medicare beneficiaries receive care from a health care provider in one of the 456 ACOs participating in the Shared Savings Program, the largest value-based care program in the country. The Shared Savings Program proposed policies advance Medicare's overall value-based care strategy of growth, alignment, and equity, with many proposals overlapping these categories. The proposed policies in this proposed rule are incremental refinements to the broader changes finalized in the CY 2023 PFS final rule (87 FR 69777 through 69968). Those changes were designed to reverse recent trends where program participation had plateaued, higher spending populations were increasingly underrepresented in the program since the change to regionally-adjusted benchmarks, and access to ACOs appeared inequitable as evidenced by data indicating underserved populations are less likely to be assigned

to a Shared Savings Program ACO, and to encourage growth of ACOs in underserved communities.

The changes to the Shared Savings Program regulations finalized with the CY 2023 PFS final rule were designed to increase program participation for new ACOs through the AIP option intended to promote health equity, and provide ACOs greater choice in the pace of progression to performance-based risk; sustain program participation by reducing the effect of ACO performance on benchmark updates and benchmark rebasing; mitigate the bias in regional expenditure calculations that benefits ACOs electing prospective assignment; strengthen incentives for ACOs serving high risk and high dual populations; improve the risk adjustment methodology to better account for medically complex, high cost beneficiaries while continuing to guard against coding initiatives; increase opportunities for low revenue ACOs in the BASIC track to share in savings by allowing ACOs that do not meet the minimum savings rate (MSR) requirement to share in savings at a lower rate; encourage ACOs to transition more quickly to all-payer quality measure reporting; update the ACO beneficiary assignment methodology; and reduce administrative burden on ACOs. The proposed changes to Shared Savings Program policies in this proposed rule include modifications designed to further these goals in concert with implementation of certain changes finalized in the CY 2023 PFS final rule, which are applicable for agreement periods beginning on January 1, 2024, and in subsequent years.

On average, updated benchmarks would marginally increase as a result of the proposal to modify the calculation of the regional component of the blended update factor used to update the historical benchmark between benchmark year (BY) 3 and the performance year (PY) by capping an ACO's regional service area risk score growth through use of an adjustment factor to provide more equitable treatment for ACOs and for symmetry with the cap on ACO risk score growth (section III.G.4.b of this proposed rule). This change is expected to increase the regional update factor amount in certain cases where an ACO may operate in a regional service area with

rapid change in the average prospective HCC risk score for the FFS assignable beneficiary population. The current methodology for calculating the regional update factor risk adjusts county-level FFS expenditures in an ACO's regional service area by Medicare enrollment type by dividing average county-level FFS expenditures for assignable beneficiaries in the county by the average prospective HCC risk score for both the performance year and BY3. The expenditure growth between BY3 and the performance year calculated using risk-adjusted regional expenditures could therefore be reduced by large increases in average prospective HCC risk scores in the ACO's regional service area that would only be partly offset by the increase in prospective HCC risk score growth for the ACO's assigned beneficiary population due to the cap on ACO assigned beneficiary prospective HCC risk score growth when updating the benchmark between BY3 and the performance year. The proposed adjustment, applicable for agreement periods beginning on January 1, 2024, and in subsequent years, would effectively strengthen the regional portion of the three-way blended update factor and help to limit losses ACOs may face when operating in regional service areas with high risk score growth and a beneficiary population that becomes more medically complex between BY3 and the performance year, increasing incentives for ACOs to form or continue participation in such areas. By utilizing a market share adjusted cap to account for ACO market share in the ACO's regional service area, the proposed adjustment would still retain a disincentive against coding intensity for ACOs that may have a high market share in their region and consequently have greater influence on regional service area risk score changes. For example, this feature of the proposal would help dissuade such ACOs from attempting to artificially increase their benchmark by selectively serving lower risk beneficiaries and increasing the intensity of diagnoses submitted for those beneficiaries.

Analyses described in the section III.G.4.b.(2) of this proposed rule, surrounding tables 33 and 34, provide the basis for estimating the impact for the proposal to cap regional service

area risk score growth. Analysis of average prospective HCC risk score changes at the Hospital Referral Region (HRR) level over an extended 2007 to 2021 historical period consistently indicated that risk score changes would be highly unlikely to exceed the proposed cap in the first two years of an ACO’s agreement period but would increase somewhat as the 5-year agreement period progresses. The analysis also notably showed that average prospective HCC risk score variation increased markedly in 2020 and 2021 with the COVID-19 PHE.³⁸⁹ The 11 percent of ACOs simulated to be impacted by the proposed adjustment in PY 2021 (a mix of ACOs with 2-year and 3-year gaps between their respective BY3 and the simulated PY 2021) is therefore anticipated to overstate variation expected in agreement periods that start on January 1, 2024 or later.

Based on the simulation in the context of the longer-run HRR data, we project that starting in 2024 the proposed adjustment would impact less than 1 percent of ACOs in PY1 of an agreement period, between 5 to 7 percent of ACOs by PY3, and up to 10 to 15 percent of ACOs by PY5. The adjustment for ACOs that are simulated to be impacted is relatively small, increasing updated benchmarks by about 0.2 percent up to 0.4 percent on average by PY5, but with the potential for up to a net adjustment of about 1.5 percent in extreme scenarios. The estimated cost from additional shared savings payments resulting from these adjustments totals \$370 million over 10 years as shown in Table 109.

TABLE 109: Projected Impact of Proposed Adjustment Factor to Apply Risk Score Cap to Regional Portion of Blended Update Factor Calculation (\$ Millions)

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	10	10	20	40	70	50	20	40	40	70	370
Estimate Range:											
Low Estimate	0	0	10	20	40	40	20	20	30	40	220
High Estimate	10	20	30	60	90	80	40	50	60	100	540

³⁸⁹ Public use data on Medicare Geographic Variation – by Hospital Referral Region, used for this analysis, is available at <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-geographic-comparisons/medicare-geographic-variation-by-hospital-referral-region>.

A material, albeit uncertain impact, is also estimated for the proposals to (a) use a rolling 3-year historical period instead of contemporary performance to calculate the 40th percentile of the MIPS Quality performance category scores starting in PY 2024 and (b) the proposal to use the higher of the ACO’s health equity adjusted quality performance score or the 40th percentile MIPS Quality performance category score across all MIPS Quality performance scores if measure suppression is required. It is likely that MIPS Quality performance will improve at least marginally over time and therefore the historical performance could produce a target that effectively is lower than the contemporary 40th percentile stipulated at baseline. The effective reduction in the threshold when using the historical MIPS scores, combined with the ‘higher of’ proposal when suppression is necessary, are assumed to effectively reduce the quality target by 0 to 5 percentage points (mode 1.5 percentage points), which would produce an estimated \$110 million in additional shared savings payments over 10 years, as shown in the Table 110.

TABLE 110: Projected Combined Impact of Quality Proposals to (a) Use Rolling 3-Year Historical Period to Calculate the 40th Percentile of the MIPS Quality Performance Category Scores and (b) Use the ‘Higher Of Value’ When Measures are Suppressed (\$ Millions)

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	0	10	10	10	10	10	10	10	20	20	110
Estimate Range:											
Low Estimate	0	0	0	0	0	0	0	0	0	0	0
High Estimate	0	30	30	30	40	40	30	40	40	40	320

The impact is also estimated to be material for the proposal to mitigate the impact of the negative regional adjustment on the benchmark. In the CY 2023 PFS final rule, CMS finalized changes applicable for agreement periods beginning on January 1, 2024, and in subsequent years, that would reduce the cap on negative regional adjustments from 5 percent to 1.5 percent and provide an offset factor to gradually decrease the negative regional adjustment amount as an ACO’s proportion of dually eligible Medicare and Medicaid beneficiaries increases or its weighted average prospective HCC risk score increases, or both. Removing the regional

adjustment entirely, when the ACO’s regional adjustment amount (expressed as a single per capita value) is negative, would incrementally increase benchmarks for higher spending ACOs (increasing shared savings payments) but would also improve the incentive for higher spending ACOs to join the Shared Savings Program and drive down unnecessary spending. For a high cost estimate we conservatively assume no new participation is generated in response to this change and estimate the higher benchmarks would generate about \$1.8 billion in additional shared savings payments partly offset by about \$1.6 billion in reduced spending in response to improved incentives. For a mean estimate we additionally assume 10 percent growth in participation from new high spending ACOs leading to about \$490 million net savings over 10 years.³⁹⁰ For a low cost estimate we instead assume 20 percent growth in participation from high spending ACOs leading to about \$1.2 billion in net savings over 10 years. Table 111 shows these estimates over the 2024-2033 window.

TABLE 111: Projected Impact of Proposal to Mitigate the Impact of Negative Regional Adjustment on Benchmarks (\$ Millions)

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total

The proposal to specify the use of the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the performance year to calculate a Medicare FFS beneficiary’s prospective HCC risk score for the performance year, and for each benchmark year

³⁹⁰ Elimination of overall negative regional adjustments, under the proposed approach, would likely generate participation growth from ACOs that will face significant negative adjustments despite the changes from the CY 2023 PFS final rule to reduce the impact of the negative regional adjustment, but also from other prospective high spending ACOs that may have difficulty estimating the relief they will ultimately receive from the offsets applicable to agreement periods beginning on January 1, 2024, and in subsequent years. Eliminating overall negative regional adjustment entirely would materially improve the business case for participation from ACOs in the former category and may at least optically improve the business case for ACOs in the latter category without actually incurring cost to the program by increasing their benchmarks.

of the ACO’s agreement period for agreement periods beginning January 1, 2024, and in subsequent years, is anticipated to remove a potential bias that may otherwise reduce benchmarks particularly for ACOs with beneficiaries exhibiting higher average renormalized risk scores at baseline. An increase in average shared savings payments to ACOs that would have participated regardless of this proposed modification is expected to ultimately be more than offset by additional savings from increased participation from ACOs serving high risk beneficiaries that would have otherwise dropped out or avoided entering the Shared Savings Program under the current approach to calculating prospective HCC risk scores. Net savings are expected to be greater at the end of the 10 year scoring window because residual savings from added participation would grow, whereas benchmarks would not be as impacted in the later part of the scoring window because there is lower likelihood that later agreement periods would have been impacted by changes in the CMS HCC risk adjustment methodology. Table 112 shows these estimates over the 2024-2033 window.

TABLE 112: Projected Impact of Proposal to Use Uniform Approach to Calculate Risk Scores in the Shared Savings Program Benchmark Calculations (\$ Millions)

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	10	20	60	100	140	-70	-130	-180	-160	-110	-320
Estimate Range:											
Low Estimate	10	-10	10	30	50	-120	-200	-270	-280	-260	-1,040
High Estimate	20	80	130	190	240	70	10	-50	-40	-20	630

An overall net impact is difficult to quantify for the proposed changes in section III.G.3.a of this proposed rule, to incorporate use of a new third step in the step-wise beneficiary assignment methodology and the proposed changes to identification of the assignable beneficiary population. These proposed changes are not currently estimated to have a net impact on program spending in either direction. Impacts on benchmark calculations for individual ACOs would likely be mixed and of relatively limited magnitude. The proposed changes could allow some ACOs to increase efficiency by utilizing more non-physician clinicians in delivering primary

care without jeopardizing assignment. On the other hand, they could marginally increase shared savings payments for efficiencies that currently would accrue entirely to the program as spillover effects on beneficiaries unable to be assigned. The overall impact is currently anticipated to be roughly neutral. We will continue to analyze data on the potential impact of these proposed changes on existing ACOs, and will monitor effects if the proposals are finalized and implemented in future agreement periods.

The remaining proposed changes to the Shared Savings Program regulations are not estimated to have an impact on program spending at the aggregate level. These proposed changes include modifying the definition of primary care services for purposes of determining beneficiary assignment, recalculating the prior savings adjustment for changes in the amount of savings earned by an ACO in a benchmark year due to compliance action taken to address avoidance of at-risk beneficiaries or changes in the amount of savings or losses for a benchmark year as a result of the issuance of a revised initial determination of financial performance, expanding quality reporting options to include Medicare CQMs, requiring reporting of MIPS PI performance category for all eligible clinicians participating in ACOs, and using beneficiary counts instead of person years in health equity adjustment calculations, as well as proposals to further refine AIP policies, revise program eligibility requirements, and make technical changes.

b. Compliance with Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the proposed new policies described in this proposed rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following proposals require the use of our authority under section 1899(i) of the Act: the proposed modifications to the calculation of regional component of the three-way blended update

factor to cap regional service area risk score growth for symmetry with the ACO risk score growth cap, as described in section III.G.4.b of this proposed rule and the refinements to AIP policies as described in section III.G.5. of this proposed rule. Further, certain existing policies adopted under the authority of section 1899(i)(3) of the Act that depend on use of the assigned population and assignable beneficiary populations, would be affected by the proposed addition of a new third step of the beneficiary assignment methodology and the proposed revisions to the definition of assignable beneficiary, described in section III.G.3. of this proposed rule, including the following: the amount of advance investment payments; factors used in determining shared losses for ACOs under two-sided models (including calculation of the variable MSR/MLR based on the ACO's number of assigned beneficiaries, and the applicability of the extreme and uncontrollable circumstances policy for mitigating shared losses for two-sided model ACOs); and calculation of the ACPT, regional and national components of the three-way blended benchmark update factor. When considered together these changes to the Shared Savings Program's payment methodology are expected to improve the quality and efficiency of items and services furnished under the Medicare program by improving the ability for ACOs to sustain effective participation in regions with changing populations and increasing the overall proportion of Medicare beneficiaries assigned to ACOs, and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule we estimated that the projected impact of the payment methodology that incorporates all finalized changes from that final rule would result in \$4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the policies that require section 1899(i)(3) of the Act authority (see 87 FR 70195

and 70196). The marginal impact of the proposed changes discussed in this proposed rule is estimated to be \$330 million lower net spending over the ten year window for all new proposals combined, including the proposal to cap an ACO's regional service area risk score growth and the proposals to add a new third step to the beneficiary assignment methodology and to revise the approach to identify the assignable beneficiary population. Therefore, we believe the requirements of section 1899(i)(3)(B) of the Act would not be violated by these relatively minor changes to program spending.

We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

11. Medicare Part B Payment for At-Home Preventive Vaccine Administration Services

In section III.H.3.c of this proposed rule, we propose to maintain the additional payment when a COVID-19 vaccine is administered in a beneficiary's home under certain circumstances, and to extend this payment to the administration of a pneumococcal, hepatitis B or influenza vaccines.

We estimated the impact of the proposal to maintain the additional payment for in-home COVID-19 vaccine administrations and to expand the policy to the administration of all Part B preventive vaccines. For this estimate, we analyzed CY 2021-2022 utilization of HCPCS code M0201 for the providers and suppliers that billed it, along with their utilization of the relevant preventive vaccine administration codes. During this period, the in-home additional payment was billed about 200,000 times by roughly 1,500 different providers and suppliers. For those

providers or suppliers who administered COVID-19 vaccine in the home in 2021-2022, HCPCS code M0201 was billed about 2 percent of the time they administered any COVID-19 vaccination. Total Medicare payments for this service in 2021 and 2022 were \$4 million and \$3 million, respectively.

While we expect that in-home administrations of COVID vaccines will continue into CY 2024, we note that the overall utilization of the COVID-19 vaccine was significantly lower in 2022 than in 2021, and future utilization is unknown. Further, if we apply the prevalence of the utilization of HCPCS code M0201 for in-home administration of the COVID-19 vaccine to the utilization of the other three Part B preventive vaccinations, it would result in higher spending of roughly \$1-2 million. Therefore, the overall estimated impact of this proposal is increased spending of less than \$5 million in 2024. We note that our analysis assumed that there would be no additional providers or suppliers who would decide to begin providing these vaccines at home for CY2024, given that COVID-19 PHE ended on May 11, 2023

12. Effects of Proposals Relating to the Medicare Diabetes Prevention Program Expanded Model

a. Effects on Beneficiaries

We propose to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) Extend the flexibilities allowed during the PHE for the COVID-191135 waiver event by 4 years (or until December 31, 2027), (2) update the MDPP payment structure to pay for beneficiary attendance on a fee-for-service basis while retaining the diabetes risk reduction performance payments, (3) remove the requirement for MDPP interim preliminary recognition and replace it with CDC preliminary recognition, and (4) remove most references to, and requirements of, the Ongoing Maintenance Sessions given that eligibility for these services will end on December 31, 2023. We anticipate that these proposed changes will have a positive impact on beneficiaries' access to MDPP services by increasing the number of MDPP eligible

organizations that enroll in Medicare as MDPP suppliers and, more importantly, increasing beneficiary access to the Set of MDPP services by allowing them continued access to MDPP through a live in-person or virtual classroom (or a combination of both modalities). The proposed changes would also remove barriers specific to attending these classes solely in-person, which may include a lack of MDPP suppliers in certain communities and challenges related to beneficiary logistics concerning course attendance.

These proposed modifications address MDPP supplier and beneficiary needs based upon available monitoring and evaluation data received to date, feedback from Medicare Advantage plans and existing MDPP suppliers, and feedback from beneficiary focus groups. The proposed changes are also in response to comments from interested parties made through public comments in response to prior rulemaking.

During the initial rulemaking for the MDPP expanded model, we sought to ensure that MDPP would be delivered in-person, in a classroom-based setting, and within an established period of service to maintain consistency with the original DPP model test. At the time, priority was placed on establishing a structured expanded model that, when delivered within the confines of the rule, would create the least risk of fraud, waste, and abuse, increase the likelihood of success, and maintain the integrity of the data collected for evaluation purposes.

However, circumstances such as the PHE for COVID-19 led us to make changes to the MDPP expanded model through implementation of an Emergency Policy for MDPP that allows for temporary flexibilities while prioritizing availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by such section 1135 waiver events. For example, in the CY 2021 PFS, we finalized the regulations in the March 31st COVID-19 IFC to amend the MDPP expanded model to revise certain MDPP policies during the COVID-19 PHE as well as any future 1135 waiver events where such 1135 waiver event may cause a disruption to in-person MDPP service delivery. These flexibilities allowed beneficiaries to either continue to

have access to MDPP through participation in virtual sessions, pause an in-person MDPP class and resume with the most recent attendance session of record, or restart MDPP from the beginning in accordance with the March 31st COVID-19 IFC (85 FR 19230).

When establishing these flexibilities, we could not predict that the COVID-19 PHE would continue for over 3 years. Although beneficiary participation decreased significantly during the initial year of the COVID-19 PHE, MDPP participation has slowly increased since 2021. As this additional modality of delivery has helped improve supplier access to beneficiaries, removing the PHE flexibilities and suppliers' ability to deliver MDPP virtually after 3 years would not only be disruptive to suppliers, it may in-fact be detrimental to the operations of the MDPP expanded model.

During the COVID-19 PHE, we permitted virtual delivery of the Set of MDPP services by MDPP suppliers who were recognized by the CDC with Diabetes Prevention Recognition Program (DPRP) in-person delivery mode, but did not permit suppliers who were only recognized by the CDC with either online or distance learning delivery modes. Although we finalized in the CY 2021 PFS that suppliers had to be prepared to return to in-person delivery when the PHE ended, the PHE lasted for over 39 months. Therefore, returning to a solely in-person, pre-PHE delivery model may not be as simple for some suppliers.

Post-PHE, many beneficiaries and suppliers have reported the desire to continue utilizing virtual delivery of MDPP for a wide range of reasons. Maintaining suppliers' ability to offer both synchronous virtual (distance learning) and in-person MDPP may increase beneficiary uptake of these services. It is important to note that permitting virtual delivery of MDPP throughout the PHE has not resulted in a spike in MDPP utilization. A reason for a lack of beneficiary participation may be tied to the fact that suppliers still had to maintain the ability to deliver in-person services (rent or own physical space), while some suppliers were unfortunately unable to pivot to virtual delivery during the COVID-19 PHE for a variety of reasons.

Current data depict that the most impactful MDPP results correspond to attending MDPP sessions virtually or through utilizing a hybrid approach (attending classes both virtually and in-person). Interim MDPP evaluation data illustrated that average participant weight loss is 5.1 percent since the expanded model launched on April 1, 2018, surpassing the expanded model's weight loss goal of 5 percent. In addition, the interim evaluation data show that, 53 percent of MDPP participants attained the 5 percent weight-loss goal, and 24.6 percent attained the 9 percent weight-loss goal.³⁹¹ Aligning with the Diabetes Prevention Program (DPP) model test³⁹² and studies on the National DPP,^{393,394} MDPP participants who attended more sessions lost more weight. For example, among beneficiaries who attended at least 9 sessions, 64 percent met the 5 percent weight loss goal and 30 percent met the 9 percent weight loss goal. For MDPP participants impacted by the COVID-19 PHE, evaluation data confirm significantly increased weight loss accompanied with a higher number of sessions attended by participants completing the expanded model in 2021, with these participants attending primarily virtual sessions or a mixture of virtual and in-person sessions.

To date, there have been no preliminary indications that the synchronous virtual delivery of MDPP has limited supplier instruction or beneficiary success, as defined by achievement of the 5 percent weight loss goal. However, it is too early to determine the impact of synchronous virtual delivery of MDPP on other outcomes such as cost-savings or incidence of diabetes. MDPP has been fundamentally limited by low beneficiary participation and corresponding small sample sizes. We believe that an increase in supplier uptake, which may be accomplished

Long-term effects of lifestyle intervention or metformin on diabetes development and microvascular complications over 15-year follow-up: the Diabetes Prevention Program Outcomes Study. *Lancet Diabetes Endocrinol*. 2015;3(11):866-875. doi:10.1016/S2213-8587(15)00291-0.

through our proposal to maintain more options of MDPP delivery modalities, will result in an increase in beneficiary enrollment. This will be critical to conducting robust programmatic evaluations, including a potential future certification of the synchronous virtual delivery of MDPP.

To assist with our ability to improve monitoring and evaluation of the synchronous virtual delivery of MDPP, we have proposed a new HCPCS G-code specific to distance learning. Additionally, extending the flexibilities allowed during the PHE for COVID-19 by 4 years would improve MDPP eligible organizations' MDPP service delivery opportunities due to the use of multiple modalities.

b. Effects on the Market

While we acknowledge that additional changes will likely be necessary to improve beneficiary access to MDPP, we anticipate that the enhancements proposed in this rule are likely to result in an increase of MDPP suppliers and increased beneficiary access to the Set of MDPP services. We anticipate that this will assist in contributing to a reduction of the incidence of diabetes among eligible Medicare beneficiaries, and in particular, those residing in underserved communities. Currently, there are approximately 786 in-person organizations nationally that are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes Prevention Recognition Program (DPRP) status. However, only 25 percent of eligible in-person organizations are participating in MDPP, and only one-third of MDPP suppliers have submitted MDPP-related claims. Through updating the payment structure to one that is similar to those of existing CMS Medicare Preventive Services such as the Intensive Behavioral Counseling for Obesity, the MDPP claims submission process may be more intuitive for existing Medicare suppliers. In addition, we anticipate that simplifying the MDPP payment structure will address some of the complexities related to the process for submitting claims, while encouraging more suppliers to submit claims for MDPP due to a reduced set of codes.

Since MDPP was established through the CY 2017 PFS, we have consistently heard from interested parties that we should include virtual delivery of MDPP as part of the expanded model test, which would increase beneficiary access to the Set of MDPP services while providing flexibility of where both a beneficiary may take the course and from where a supplier may deliver the course. Although we did not allow for a fully virtual delivery of MDPP until the COVID-19 PHE, we did allow a limited number of virtual make-up sessions, which could be delivered either synchronously or asynchronously. The rationale for allowing a limited number of virtual make-up sessions was due to the fact that the data used to certify MDPP were based upon in-person delivery, thereby fully virtual delivery was arguably outside the scope of certification.

The COVID-19 PHE led CMS to establish MDPP flexibilities that allowed fully virtual delivery of the Set of MDPP services by suppliers. We established several emergency flexibilities within the IFC-1 that removed the limit on the number of virtual makeup sessions, and in the CY 2021 PFS, we finalized the MDPP flexibilities from the IFC-1 while establishing the MDPP Emergency Policy that allowed for virtual delivery of MDPP, including virtual weight collection. However, the CY 2021 PFS stated that MDPP suppliers must retain the capacity to deliver the Set of MDPP services in-person, precluding organizations with CDC DPRP recognition solely in the distance learning or online modalities from participating in MDPP during the COVID-19 PHE. Interested parties commented that some beneficiaries may have limited access or ability to use the technology required for participation in virtual MDPP sessions

In the CY 2022 PFS, although outside the scope of rule, interested parties recommended that we continue the virtual option following the end of the COVID-19 PHE to assist in increasing access to MDPP, especially for those with transportation needs as well as for beneficiaries in rural and low-income communities, who may suffer from a lack of in-person suppliers. As a result of these recommendations, in this rule, we are proposing to extend the

PHE flexibilities, specific to allowing synchronous virtual delivery of MDPP, also known as distance learning.

Currently, there are numerous large geographic gaps of MDPP supplier locations, and synchronous virtual delivery may be part of the solution to increasing the accessibility of MDPP to more beneficiaries. It is unclear how the market will respond to the proposed extension of the PHE flexibilities allowed during the COVID-19 PHE, especially since we are still requiring suppliers to have and maintain an in-person DPRP recognition, but we believe organizations will be ready to engage in the delivery of the Set of MDPP services either in-person, through distance learning, or through a combination of in-person and distance learning. We also believe that having more flexibility in how the Set of MDPP services are delivered will make MDPP more accessible to beneficiaries, particularly those who live in rural areas or in communities with gaps in MDPP supplier locations.

c. Payment for MDPP Services

Regulations at § 414.84 specify MDPP suppliers may be eligible to receive payments for furnishing MDPP services and meeting performance targets related to beneficiary weight loss and/or attendance. However, we have consistently heard from suppliers and interested parties that the MDPP performance-based payment structure has been confusing to some suppliers, including those new to Medicare as well as existing suppliers. Approximately 37 percent of MDPP suppliers have submitted FFS claims for MDPP.³⁹⁵ Confusion with claims submission has been due, in part, to the MDPP payment structure, which pays for performance-based milestones versus paying for traditional fee-for-service. The performance-based payment structure requires 15 HCPCS G-codes if including ongoing maintenance sessions, and 11 G-codes for the 12-month MDPP service period. Therefore, we are proposing to shift this payment structure to pay for attendance on a fee-for-service basis while retaining the diabetes risk reduction performance

³⁹⁵ Unpublished data from Acumen LLC, Quarter 4 2022 Quarterly Monitoring Report to CMS.

milestones, for example 5 percent and 9 percent weight loss as well as the maintenance of the 5 percent weight loss in months 7-12. This proposed streamlined payment structure will allow suppliers to receive a more consistent set of payments for their delivery of the Set of MDPP services and reduce the number of G-codes for easier billing.

We anticipate that this updated payment structure will reduce the upfront beneficiary retention costs while motivating eligible suppliers to enroll in Medicare to become MDPP suppliers and provide the Set of MDPP services to eligible Medicare beneficiaries. In the current MDPP payment structure, suppliers submit claims after the 1st, 4th, and 9th sessions attended during the core sessions interval, and following attendance of the two (2) sessions during each of the core maintenance intervals. Although the proposed per session payment of \$25 is less than the current per session payment of \$38, suppliers will receive up to 22 payments for attendance in the proposed payment structure compared to seven attendance-based payments, for participants who began participation in 2022 or later, or eleven attendance-based payments for participants whose first core session was in 2021 or earlier. The total attendance-based payments will increase by \$54 to \$550 in the proposed payment structure, compared to \$496 in the current one.

This proposed payment schedule would not only eliminate gaps in payment by providing smaller but more frequent per-session payments, it would also reduce or eliminate some of the coding challenges related to the number of existing HCPCS codes. We have proposed to decrease the one-time performance payments for beneficiary achievement of the 5 percent and 9 percent weight loss goals as well as propose a new HCPCS G-code for the maintenance of the 5 percent weight loss during months 7-12. The proposed total maximum payment of \$768 consists of the attendance-based payments and the weight loss performance payments. Although the proposed maximum payment of \$768 over a one-year service period is the same as the current maximum payment, we believe this simplified payment structure will lead to fewer claims

rejections while encouraging more suppliers to submit MDPP claims for the beneficiaries they serve, as well as motivate more eligible organizations enroll in Medicare to participate in MDPP.

d. Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

There are two proposed changes to the Medicare Diabetes Prevention Program (MDPP) which are relevant to this impact analysis. Both changes will be implemented in 2024 if finalized: Simplifying the MDPP payment schedule; and allowing specified Public Health Emergency (PHE) flexibilities to continue for 4 years after the PHE ends—namely, allowing for synchronous virtual delivery of the Set of MDPP services .

Table 113 shows the estimated impact (in millions) of these two proposed changes on Medicare spending:

TABLE 113: Estimated Impact (in millions) of the Two Proposed Changes on Medicare Spending

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact on Medicare Spending	\$0.3	\$0.3	\$0.1	\$0.0	-\$0.2	-\$0.8	-\$0.7	-\$0.6	-\$0.5	-\$0.3	-\$2.4

(b) Assumptions/Notes

- Simplifying the payment schedule will lead to fewer claim denials and more participation from MDPP suppliers . For example, only 55-62% of FFS participants listed in the supplier crosswalks have an associated MDPP claim over the past 2 years, meaning that organizations have submitted data to the CDC as part of their Diabetes Prevention Recognition Program (DPRP) requirements, and also have FFS claims submitted for the same participants for the same sessions recorded in the DPRP data. The proposed payment schedule will reduce the number of HCPCS codes to from 15 to 6 and eliminate some of the coding issues. It will also eliminate the gaps in payment by providing smaller but more frequent per-session payments.

- The average payment per MDPP participant will increase by \$150. The new payment schedule will likely lead to more successful claim payment submissions and will motivate MDPP providers to retain participating beneficiaries for longer periods of time.

- In 2022, 551 FFS claims were paid for the initial MDPP session, compared with 514 in 2021. According to counts of new FFS participants, there have been about 700 new entrants per year in recent years. With the implementation of a simpler payment schedule and the extension of PHE flexibilities, we assume that new participation will be more in line with claim payments for HCPCS code G9873 and will increase to 1,000 in 2024 and 1,250 during the following years until the extended flexibilities end. We estimate that there will be 500 new (in-person only) participants each year starting in 2029.

- Since the start of the PHE, synchronous virtual delivery of MDPP services has been more prevalent than in-person delivery. However, given the coding/reporting issues during the PHE, it is difficult to determine how many beneficiaries are still receiving MDPP services in-person. Without the proposed changes, we assume that new participation will be capped at 400 beneficiaries per year.

- For preventing diabetes progression, synchronous virtual delivery of the Set of MDPP services has the same level of effectiveness as in-person delivery. Following 3 years of delivering MDPP almost solely virtually, suppliers and beneficiaries have become adept at utilizing virtual delivery, as many providers in numerous healthcare settings have shifted to utilizing technology. Furthermore, preliminary MDPP data collected during the PHE indicates that beneficiaries have achieved similar weight loss and attendance goals as participants in both the in-person DPP test and MDPP participants who enrolled in MDPP prior to the pandemic. This assumption is revisited in the Sensitivity Analysis section.

(c) Sensitivity Analysis

On March 14, 2016, the Office of the Actuary (OACT) published a certification memorandum setting out the conditions for expansion of the Medicare Diabetes Prevention Program (MDPP), which can be found at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Research/ActuarialStudies/Downloads/Diabetes-Prevention-Certification-2016-03-14.pdf>. Assumptions about the 10-year cost impacts of virtual delivery of MDPP services takes into account the assumptions of the original certification, and adjusts for diabetes costs in 2023 dollars, and trends those costs over the next 10 years.

Since both the effectiveness and the future participation level of synchronous virtual delivery of MDPP services are largely unknown, Table 114 shows 10-year cost impacts (in millions) of varying levels of effectiveness of the virtual delivery of the Set of MDPP services relative to the in-person delivery of the Set of MDPP services, paired with varying levels of virtual MDPP participation.

TABLE 114: 10-year Cost Impacts (in millions) of Virtual Delivery of MDPP Services

Virtual Beneficiaries Per Year/Effectiveness	25%	50%	75%
1,000	\$0.7	-\$0.8	-\$2.3
2,000	\$1.3	-\$1.6	-\$4.6
3,000	\$2.0	-\$2.4	-\$6.9

As indicated in Table 114, virtual delivery of MDPP services is estimated to produce savings when it is at least 50 percent as effective as in-person delivery.

13. Appropriate Use Criteria for Advanced Diagnostic Imaging

Section 1834(q)(2) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (Pub. L. 113-93, April 1, 2014) (PAMA), directs CMS to establish a program to promote the use of appropriate use criteria (AUC) for applicable imaging services furnished in an applicable setting.

As discussed in detail in section III.J. of this proposed rule, since 2015, we have taken a thoughtful, stepwise approach that maximized engagement and involvement of interested parties

to implement the statutory provisions set forth in section 1834(q), as added by section 218(b) of the PAMA, using notice and comment rulemaking. As codified at § 414.94, we established the first two components of the AUC statutory requirements - establishment of AUC and mechanisms for consultation. We began to build the parameters for the fourth component, outlier identification and prior authorization, leading to prior authorization, by establishing the priority clinical areas (PCAs). We began implementing the third component, the AUC consultation and reporting requirement, using the ongoing educational and operations testing period. However, as discussed previously in this proposed rule, at this time, we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization. As a result, we have proposed to pause implementation of the AUC program for reevaluation and to rescind the current AUC program regulations at § 414.94.

In the CY 2019 PFS final rule (83 FR 59452), we performed an RIA for this program and updated that RIA in the CY 2022 PFS final rule (86 FR 64996). The estimated impacts in the CY 2022 PFS final rule are as follows:

- Cost to ordering clinicians of required AUC consultation: \$51,039,109 annually.
- Cost to Medicare beneficiaries for additional office visit time: \$54,789,518 annually.
- Cost to ordering clinicians of transmitting consultation information: \$94,495,192 annually.
- Cost to furnishing clinicians to update processes to report AUC information: \$1,851,356,888 (one time).
- Potential savings to Medicare program from decrease in imaging utilization: \$700,000,000 annually.

Table 115 also includes the AUC program-related activities and their corresponding impact estimates. By pausing efforts to implement the AUC program for reevaluation and rescinding the AUC program regulation at § 414.94, the Medicare program may not realize the estimated savings, and clinicians and beneficiaries will not experience the estimated costs.

TABLE 115: AUC Program Related Activities with Impact Estimates From CY2022 PFS

AUC Program Related Activity	CY 2022 PFS Rule Impact Estimate
Impact of required AUC consultations by ordering professional	\$51,039,109
Impact to Medicare beneficiaries	\$54,789,518
Impact on transmitting orders for advanced diagnostic imaging services	\$94,495,192
AUC automated solution	\$1,851,356,888
Medicare program impacts associated with advanced diagnostic imaging services	\$700,000,000

14. Medicare and Medicaid Provider and Supplier Enrollment Changes

In this section, we discuss the impact of our proposed Medicare provider enrollment revocation provisions and our Medicaid termination database proposal. For all provider enrollment proposals not referenced in this section, we have determined that they would not have an economic impact.

a. Medicare Revocation Reasons

As discussed in section III.J of this proposed rule, we are proposing several new or expanded revocation reasons in § 424.535(a).

First, we propose to expand § 424.535(a)(1) to include instances where the provider or supplier is non-compliant with the enrollment requirements in Title 42. Paragraph (a)(1) would no longer be restricted to non-compliance with the provisions of 42 CFR part 424, subpart P.

Second, new § 424.535(a)(15) would give CMS the authority to revoke enrollment if the provider or supplier, an owning or managing employee or organization thereof, or an officer or director thereof has had a civil judgment under the False Claims Act (31 U.S.C. §§ 3729 – 3733) imposed against them within the previous 10 years.

Third, § 424.535(a)(16) would permit CMS to revoke enrollment if a provider or supplier, or any owner, managing employee or organization, officer, or director thereof, has been convicted of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries.

Fourth, we propose in new § 424.535(a)(243) that CMS may revoke an IDTF’s, DMEPOS supplier’s, OTP’s, or HIT supplier’s, or MDPP’s enrollment based on a violation of any standard or condition in, respectively, §§ 410.33(g), 424.57(c), 424.67(b) or (e), or 424.68(c) or (e), or 424.205(b) or (d)..

Based on CMS statistics concerning the average annual amount of Medicare payments a provider or supplier receives, we project a figure of \$50,000. We note that we have recently used this figure when estimating the potential savings associated with several new revocation reasons.³⁹⁶ For purposes of consistency and accuracy, we propose to use this \$50,000 amount in this proposed rule.

Table 116 outlines the estimated annual number of revocations that would ensue with the four aforementioned revocation proposals:

TABLE 116: Estimated Annual Number of Revocations

Proposed Revocation Reason	Number of Revocations
§ 424.535(a)(1)	5
§ 424.535(a)(15)	5
§ 424.535(a)(16)	5
§ 424.535(a)(23)	5
Total	20

³⁹⁶ For example, see the final rule published in the Federal Register on November 18, 2022 (87 FR 69404), titled Medicare and Medicaid Programs; CY 2023 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Implementing Requirements for Manufacturers of Certain Single-dose Container or Single-use Package Drugs To Provide Refunds With Respect to Discarded Amounts; and COVID-19 Interim Final Rules”.

These revocations would represent a savings to the Federal Government because Trust Fund dollars would no longer be paid to the revoked providers and suppliers. Accordingly, we project an annual savings to the Federal Government of \$1,000,000 (\$50,000 x 20 revocations).

b. Medicaid Termination Database

As discussed in section III.J. of this proposed rule, we are proposing certain provisions in 42 CFR part 455 concerning the length of time a provider remains in the Medicaid termination database and how this interacts with the termination periods that States impose upon terminated providers. We do not believe these proposals involve any additional impact or burden on providers or States. In fact, it could result in a reduction of burden because a provider's potential length of time in the termination database would be capped at 10 years, although we have no data available with which to assist us in calculating the possible burden reduction. As a result, since we are uncertain of how much of the burden will be reduced, we are seeking public comments from the public to aid in understanding how to measure said burden reduction.

15. Expand Diabetes Screening and Diabetes Definitions

As discussed in section III.L. in this proposed rule, we propose to: (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test, (2) expand and simplify the frequency limitations for diabetes screening, and (3) simplify the regulatory definition of "diabetes" for diabetes screening, Medical Nutrition Therapy (MNT) and Diabetes Outpatient Self-Management Training Services (DSMT).

We anticipate that expanding coverage of diabetes screening to include the HbA1c test and expanding and simplifying the frequency limitations for diabetes screening to result in some additional service utilization, but we also anticipate the additional utilization may be balanced, in part, by potential long term benefits and savings resulting from increased prevention and early detection (allowing for less invasive and more effective treatment). As described earlier in our proposal, Medicare currently covers the Fasting Plasma Glucose (FPG) test and the Glucose

Tolerance Test (GTT) for diabetes screening. The HbA1c test does not require fasting and is more convenient than the currently covered FPG and GTT. We also propose to expand and simplify the frequency limitations for diabetes screening by aligning to the statutory limitation of “not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual.”

We estimate our proposal to expand diabetes screening to result in approximately \$68.5 million in additional annual expenditures for the Medicare Program. Our estimate is based on the following assumptions. Based on calendar year 2022 actual experience, approximately 27.3 percent of beneficiaries had a blood panel test that did not include the HbA1c test. Medicare currently pays approximately \$9.50 per HbA1c test for diabetes management. The Medicare statutory and regulatory eligibility factors for an individual at risk for diabetes (section 1861(yy)(2) of the Act, 42 CFR 410.18(e)) cover much of the current Medicare beneficiary population. We assume that approximately 7.6 million potential additional HbA1c tests for diabetes screening to be billed under our proposal in calendar year 2024 and that the HbA1c test would be billed with a blood panel 95 percent of the time. Our estimate does not reflect secondary effects of the proposed policies, such as increased utilization of preventive screening services, additional follow-up services, and potential offsetting savings (including prevention and more effective treatment through early detection) that may result from these coverage expansions. Secondary effects are difficult to predict, may materialize many years after the intervention and may, in part, offset one another.

We do not anticipate that our proposal to simplify and expand the regulatory definition of “diabetes” for diabetes screening, MNT and DSMT to result in a significant economic impact on the Medicare program. As described earlier, we propose to remove the regulatorily codified clinical test requirements from the definition of “diabetes” for diabetes screening, MNT and DSMT and propose a shortened version of the existing definition that would simply define

diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. We believe that our proposal will empower health care professionals to apply clinically accurate and appropriate criteria and that we can ensure certain safeguards through medical coding and claims processing instructions. We do not anticipate our proposal to simplify and expand the regulatory definition of “diabetes” for diabetes screening, MNT and DSMT to result in a significant economic impact on the Medicare Program because the regulatory simplification would not otherwise change requirements or conditions of coverage and payment.

16. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (section 2003 of the SUPPORT Act)

In section III.M. of this proposed rule, we are proposing several updates to the CMS EPCS Program. We are proposing to remove the same entity exception at § 423.160(a)(5)(i) from the CMS EPCS Program and to add “subject to the exemption in paragraph (a)(3)(iii) of this section” to § 423.160(a)(5). Under this proposal, prescriptions that are prescribed and dispensed within the same legal entity are included in CMS EPCS Program compliance calculations as part of the 70 percent compliance threshold at § 423.160(a)(5). This proposal provides flexibility to prescribers and dispensing pharmacies that are the same entity to choose either of the electronic standards available at § 423.160(a)(3)(iii) to conduct e-prescribing appropriate for their internal systems without us having to exclude these prescriptions completely from the CMS EPCS Program. This proposal would affect prescriptions where the prescriber and the dispensing pharmacy are part of the same legal entity. Due to the limitations in identifying these prescriptions in the Prescription Drug Event (PDE) data, the ability to quantify the impact of this proposal is unknown. Please see section III.M.3.b. of this proposed rule for our discussion.

We are proposing to specify how we count prescriptions for the compliance calculation by proposing to use the unique identifier given to a prescription by the pharmacy in the

measurement year and included in the Part D claims data. We will count renewals as an additional prescription in the CMS EPCS Program compliance threshold calculation, and we will not count refills as an additional prescription in the CMS EPCS Program compliance threshold calculation unless the refill is the first occurrence of the unique prescription in the measurement year. If each refill included on the original prescription were counted as a separate prescription, we believe there would be an incremental impact on small prescribers. Preliminary analysis of 2021 Part D data shows that approximately 23,000 prescribers would no longer qualify for the small prescriber exception and that approximately 6,900 additional prescribers would be noncompliant.

We are proposing updates to the CMS EPCS Program recognized emergency exception and waiver exception presently found at § 423.160(a)(5)(iii) and (iv) and proposed to be codified at § 423.160(a)(5)(ii) and § 423.160(a)(5)(iii) respectively. We are proposing to have discretion to determine which emergencies trigger the recognized emergency exception starting in the 2024 measurement year and proposing that prescribers to whom the exception applies would be exempted from the CMS EPCS Program requirements for the entire measurement year. We are proposing to modify how we have previously defined “extraordinary circumstance” for purposes of the waiver exception. We propose that an “extraordinary circumstance” means a situation outside of the control of a prescriber that prevents the prescriber from electronically prescribing a Schedule II-V controlled substance that is a Part D drug and does not exclude “cases of an emergency or disaster.” In cases of extraordinary circumstances, we are proposing the timeframe that would be covered by a waiver authorized under the CMS EPCS Program to be the entire measurement year. We are proposing that a prescriber has a period of 60 days from the date of the notice of non-compliance to request a waiver. Approved waivers would apply to prescriptions written by a prescriber for the entire measurement year, and the waiver would expire on December 31 of the applicable measurement year. Although we are modifying the

situations in which a prescriber can apply for an extraordinary circumstances waiver and limiting the recognized emergencies exception that applies to the CMS EPCS Program, we do not anticipate these proposals to affect many clinicians compared to the current policies. First, we believe that the proposal for CMS to identify which emergencies trigger the recognized emergency exception would still capture the vast majority of emergencies or disasters that affect a prescriber's ability to achieve EPCS compliance and would remove any need for additional prescribers to apply for a waiver. Second, some prescribers who experience an emergency may still meet the 70 percent compliance threshold by the end of the emergency period and would not need to apply for a waiver exception. Finally, we are unable to quantify the additional number of potential disasters or emergencies prescribers might experience due to variability in the number of disasters and emergencies in a given measurement year. Therefore, we are not increasing our assumption that 100 waiver requests would be submitted to the CMS EPCS program, as we discussed in the CY 2022 PFS final rule (86 FR 65562).

We are proposing to continue sending non-compliance notices to prescribers identified as non-compliant with the CMS EPCS Program for any individual measurement year, and we do not believe that causes additional costs or will require additional time. Please see section III.M.6. of this proposed rule for our discussion. We do not anticipate the provisions to have any incremental impact on the cost or time associated with prescriber compliance with the electronic prescribing for controlled substances requirement or the cost to interested parties.

17. Proposed Changes to the Regulations Associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System (GADCS)

As discussed in section III.N.2. of this proposed rule, section 4103 of the CAA amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons set forth in those subsections through December 31, 2024. The ambulance extender provisions are enacted through legislation that is self-implementing. A plain reading of the statute requires only a ministerial

application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions legislative provisions. The Congressional Budget Office (CBO)'s estimated cost of these provisions was \$55 million in 2023, \$91 million in 2024, and \$29 million in 2025 (https://www.cbo.gov/system/files/2023-01/PL117-328_1-12-23.pdf, p. 17). We are proposing only to revise the dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

In addition, as discussed in section III.N.3. of this proposed rule, we are proposing the following changes to the Medicare Ground Ambulance Data Collection Instrument: Adding the ability to address partial year responses from ground ambulance organizations, introducing a minor edit to improve the reporting consistency of hospital-based ambulance organizations, and four technical corrections to typos. The changes and clarifications aim to reduce burden on respondents, improve data quality, or both.

While we believe that these changes and clarifications will be well received by the ground ambulance interested parties, we do not believe that these changes would have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We note that the overall length of the Medicare Ground Ambulance Data Collection Instrument will be the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we propose to add are intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions.

18. Hospice CoP Changes

a. Permitting MFT and MCH to serve as members of the interdisciplinary group (IDG)

Under the Medicare Program in accordance with Subtitle C, Section 4121 of the CAA 2023, we are proposing conforming regulations text changes to permit MFT or MHC to serve as

members of the IDG. These proposed changes will require hospices to include at least one SW, MFT or MHC to serve as a member of the IDG. Hospices will have the flexibility to determine which discipline(s) are appropriate to serve on the IDG based on the needs of the patients.

b. Modification of the hospice personnel requirements with the addition of MFT and MHC

Under the Medicare Program in accordance with Subtitle C, Section 4121 of the CAA 2023, we are proposing conforming regulations text changes to permit MFT or MHC to serve as members of the IDG. With the proposed addition of MFT and MHC into the hospice CoPs, it is important to include these new disciplines into the personnel qualifications at § 418.114.

However, in section III.C. of this rule, we are proposing to add both MHC and MFT to the provider requirements under 42 CFR subpart B Medical and Other Health Services at §§ 410.53 and 410.54. Therefore, to avoid duplication and confusion between the CoP and the provider requirements under the Medical and Other Health Services provision, we are proposing to add both MHC and MFT to the requirements at § 418.114(c)(3) and (4) and referencing the new requirement at §§ 410.53 and 410.54 respectively. We do not expect any increase in burden for this modification. In addition, we do not expect the changes for this provision to cause any appreciable amount of expense or anticipated saving and we do not believe this standard would impose any additional regulatory burden.

19. RFI: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988

We are publishing this RFI in this proposed rule to seek comments from interested parties. There is no impact for this RFI.

20. Basic Health Program Provisions

In this proposed rule, we are proposing to update the requirements for a BHP Blueprint revision. We also propose to allow a State with a BHP to suspend its BHP, if necessary, and provide requirements related to a BHP suspension. We also propose updates to the annual report

content and timing, if a BHP is suspended. This proposal includes requirements for accessible notices. Finally, we propose changes related to an individual's appeals rights. We do not anticipate that these provisions would impose any additional regulatory burden.

21. A Social Determinants of Health Risk Assessment in the Annual Wellness Visit

We propose in section III.S. to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the Annual Wellness Visit (AWV) by adding a new Social Determinants of Health (SDOH) Risk Assessment as an optional, additional element with an additional payment. We propose that the SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWV. Our proposal builds upon our separate proposal described earlier to establish a stand-alone G code (GXXX5) for SDOH Risk Assessment furnished in conjunction with an Evaluation and Management (E/M) visit. See section II.E. of this proposed rule for additional information on coding, pricing, and additional conditions of payment for the proposed new SDOH Risk Assessment service. We anticipate our proposal to add a SDOH Risk Assessment as an optional, additional element with additional payment within the AWV to result in some additional service utilization, but we also anticipate the additional utilization may be balanced, in part or in whole, by potential long term benefits and savings resulting from a more effective AWV and increased prevention and early detection (allowing for less invasive and more effective treatment). We do not anticipate that the addition of an optional SDOH Risk Assessment to the AWV would result in a significant impact to the Medicare Program.

22. Updates to the Quality Payment Program

In this section, we estimate the overall and incremental impacts of the Quality Payment Program policies proposed in this rule. We estimate participation, final scores, and payment adjustment for clinicians participating through traditional MIPS, MVPs, and the Advanced APMs. We also present the incremental impacts to the number of expected Qualified

Participants (QPs) and associated APM Incentive Payments that result from our policies relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

a. Overall MIPS Modeling Approach and Data Assessment

(1) MIPS Modeling Approach

For this proposed rule we create two MIPS RIA models: a baseline and proposed policy model. Our baseline model includes previously finalized policies that would be in effect for the CY 2024 performance period/2026 MIPS payment year if none of our proposed policies are finalized. Examples of previously finalized policies are an updated methodology for calculating the complex patient bonus, and an increase in the data completeness threshold for quality measures. The proposed policies model builds off the baseline model and incorporates the MIPS policy proposals for the CY 2024 performance period/2026 MIPS payment year included in this proposed rule. The aim of the baseline and proposed policy models is to estimate the incremental impacts of the policies in this proposed rule. We used a similar approach in the CY 2023 PFS final rule (87 FR 70199 through 70200).

As discussed in the CY 2023 PFS final rule, our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This modeling approach enables our model to align as much as possible with actual MIPS scoring and minimizes differences between our projections and policy implementation. There are still some limitations to our model due to data limitations and assumptions. These limitations are discussed later in this RIA. The aim of the baseline model is to reflect participation, final scores, and payment adjustments for the upcoming performance period and associated MIPS payment year based on previously finalized policies for the performance period and MIPS and MIPS payment year.

(2) Data Used to Estimate Future MIPS Performance

In the 2023 PFS final rule (87 FR 70200), we discussed our decision to use the

submissions data for the CY 2021 performance period to estimate eligibility, final scoring, and payment adjustments supplemented by CY 2019 performance period data to estimate participation and payment adjustments for the sake of estimating the size of the budget neutral pool. To mitigate the potential effect of the PHE on our engagement estimates for the CY 2024 performance period/2026 MIPS payment year, for MIPS eligible clinicians who submitted data for the CY 2019 performance period and did not submit data for the CY 2021 performance period, we assigned their participation status and final score data from the CY 2023 PFS proposed rule baseline model (87 FR 46408). This is because the CY 2023 PFS proposed rule baseline model (87 FR 46408) is based on submissions data for the CY 2019 performance period (hereafter called “2019 data supplement”).

We indicated that we believed this approach would reflect data that is generally more current while mitigating the impacts of changes in reporting behavior during the PHE on our participation estimates. Although we believe that this is the best data source to accurately model the impact of our proposed policies, the use of data from the CY 2021 performance period supplemented by data from the CY 2019 performance period, has the same limitations as discussed in the 2023 PFS final rule (87 FR 70200). We took a similar approach this year.

The submissions for the CY 2022 performance period were not available in time to assess whether the data for that performance period can be used to predict future performance. For the final rule, we will evaluate whether it is appropriate to use the CY 2022 performance period data and whether adjustments to this RIA model based on factors such as clinician behavior or performance category data availability would need to be made if CY 2022 performance category submissions data were used instead.

b. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2025, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs for the applicable QP Performance Period for a year and the corresponding payment year. In payment years 2019 through 2024 these QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the calendar year immediately preceding the payment year. In payment year 2025, QPs will receive a lump-sum APM Incentive Payment equal to 3.5 percent payment of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25

percent. Thus, eligible clinicians who are QPs for the year will receive differentially higher PFS payment rates than those who are not QPs.

We incorporated this change into our baseline eligibility determination. In addition, the thresholds to achieve QP status beginning in the 2024 QP Performance Period will increase to 75 percent for the payment amount method, and 50 percent for the patient count method. Overall, we estimate that for the 2024 QP Performance Period between 187,000 and 241,000 eligible clinicians will become QPs, and therefore be excluded from MIPS reporting requirements and payment adjustments.

In section VII.E.23.b of this proposed rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2024 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2024 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2024 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track);

- Primary Care First (PCF) Model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).
- Making Care Primary (MCP) tracks 2 and 3

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 42 CFR 414.1425(a) for information on the APM Participant Lists and QP determinations) for the 2022 QP performance period third snapshot QP determination date to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2024 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

c. Estimated Number of MIPS Eligible Clinicians for the CY 2024 Performance Period/2026 MIPS Payment Year

(1) Clinicians Included in the RIA Baseline and Final Policies Models Prior to Applying the Low-Volume Threshold Exclusion

For this proposed rule, we applied the same assumptions as in the CY 2023 PFS final rule (87 FR 70201 through 70202), unless otherwise noted. In the CY 2023 PFS final rule (87 FR 70202), we explained that we modified some of our assumptions to estimate engagement in MIPS to mitigate the effects of potential non-engagement due to the extreme and uncontrollable circumstances policies related to the PHE.

In the CY 2023 PFS final rule (87 FR 70201), we explained our use of the final reconciled eligibility determination file. This file reconciles eligibility from two determination periods and aligns with the CY 2021 performance period submissions data on which we based this model. In this proposed rule, we again used the final reconciled 2021 eligibility determination file which aligns with CY 2021 performance period submissions data. We did not

propose any modifications to MIPS eligibility requirements, therefore the same eligibility assumptions apply to both the baseline and proposed policies models. Our analysis found that there were 1.7 million clinicians who had PFS claims from October 1, 2020 to September 30, 2021. This initial population of clinicians was used to determine eligibility using the processes described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians after Applying Assumptions for the Low-Volume Threshold Exclusion and Considering the Extreme and Uncontrollable Circumstances Policies Related to COVID-19 PHE

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted to MIPS. Generally, if a clinician or group does not exceed the low-volume threshold criteria then that clinician or group is excluded from participation in MIPS. The low volume threshold uses three criteria: allowed charges, number of Medicare patients who receive covered professional services, and number of services provided. A clinician or group that exceeds at least one, but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby being measured on performance and receiving a MIPS payment adjustment.

We describe below the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.7 million clinicians for the proposed policies model. We applied the same assumptions as in the CY 2023 PFS final rule (87 FR 70201 through 70202) to apply the low-volume threshold and to determine whether clinicians participate in MIPS as a group, virtual group, APM entity, or as individuals. In the CY 2023 PFS final rule (87 FR 70202), we explained our use of the CY 2019 performance period data to update eligibility assumptions to account for the effects of the extreme and uncontrollable circumstances (EUC) policy that was applied due to the PHE. We noted that the use of CY 2021 performance period data alone might overstate the number of clinicians with “required eligibility” who do not

participate in MIPS due to the PHE under the EUC policy and therefore may not have submitted data. If we assumed in this RIA model, which estimates of CY 2024 performance period/CY 2026 payment year, participation and non-participation to be similar to the CY 2019 performance period, we would likely overstate the number of clinicians receiving a negative payment adjustment. Since these clinicians actually would have received a neutral score under the CY 2021 performance period EUC reweighting policy but would receive a negative payment adjustment in our simulation.

As we noted in section VII.E.22 of this RIA, in order to mitigate the potential effect of the PHE on our engagement estimates for the CY 2024 performance period, for MIPS eligible clinicians who submitted data for the CY 2019 performance period and did not submit data for the CY 2021 performance period, we followed the same process described in the CY 2023 PFS final rule (87 FR 70202) and assigned their participation status and final score data from the CY 2023 PFS proposed rule baseline model (87 FR 46408). This is because the CY 2023 PFS proposed rule baseline model (87 FR 46408) is based on the 2019 data supplement. We believed these clinicians may participate and perform more similarly to the CY 2019 performance period than the CY 2021 performance period during the CY 2024 performance period.

We do not have ability to assess the performance of clinicians reflected in our 2019 data supplement in our model, so we used the same score for this final rule's baseline and proposed policies models. Because we used the same score for the baseline and proposed policies model, we were not able to assess the incremental impact of policies for this group. However, we believe making this adjustment is valuable because it helps mitigate the potential effect of overestimating the number of clinicians eligible for, and participating in MIPS, versus non-participants, which in turn would affect our estimation of the MIPS redistribution payment and the size of the budget neutral pool.

For our RIA model, we established the “required eligibility” category, which means the clinician exceeds the low-volume threshold in all 3 criteria and is subject to a payment adjustment is separated into three buckets this year: (1) “Clinicians who Report”; (2) “Did not report in 2021, but did report in 2019”; and (3) “Did not report in either 2021 or 2019.” We have done this so that we can isolate both the effects of our proposed policies, which are modeled using 2021 data, the effect of the 2019 data supplement, and model the population of clinicians who did not engage in either year. The year refers to which population of data we used (that is, the 2021 population of clinicians or the 2019 supplement).

a) MIPS Eligibility Estimates

Table 117 summarizes our eligibility estimates for the proposed policies model after applying our assumptions discussed previously.

We estimate approximately 122,183 MIPS eligible clinicians have the required eligibility criteria and submitted data for at least one performance category in MIPS for the CY 2019 and 2021 performance periods, 9,906 MIPS eligible clinicians who did not engage in MIPS based on 2021 performance period MIPS data but did engage based on 2019 performance period MIPS data, and 14,289 MIPS eligible clinicians counted in our model as “did not submit in data to MIPS for the CY 2019 or CY 2021 performance period.” These are clinicians who did not submit data to MIPS for the CY 2019 or CY 2021 performance periods, or did not submit data to MIPS for the CY 2021 performance period and do not have CY 2019 performance period data.

We estimate approximately 664,562 MIPS eligible clinicians as having “group eligibility” in Table 117. “Group eligibility” means that these clinicians belong to a group that exceeds the low-volume threshold. If they were not associated with the group submission, these clinicians will not be eligible for MIPS.

Finally, we estimate about 9,107 clinicians will be eligible for MIPS and participate through “opt-in eligibility” through the “opt-in” policy. We updated our opt-in policy to reflect

that a clinician can elect to opt-in into MIPS and will be scored, even if they do not submit data to MIPS.

We estimate a total MIPS eligible clinician population of approximately 1,741,607 with \$9 billion PFS allowed charges estimated to be included in the CY 2024 performance period/2026 MIPS payment year.

TABLE 117: Description of MIPS Eligibility Status for CY 2023 Performance Period/2025 MIPS Payment Year Using the CY 2023 PFS Final Rule Assumptions**

		CY 2024 PFS Proposed Rule estimates	
Eligibility Status	Predicted Participation Status in MIPS Among Clinicians *	Number of Clinicians	PFS allowed charges (\$ in mil)**
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS *	122,183	\$34,134
	Did not Report in 2021 but Reported in 2019	9,906	\$2,963
	Did not Report in 2021 and did not Report 2019 (or did not have data in 2019)*	14,289	\$4,261
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Had a group submission	664,562	\$17,533
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Opted-in To MIPS	9,107	\$473
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		820,047	\$59,363
Potentially MIPS Eligible			
(not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible; Do not opt-in	185,342	\$6,211
	Group Eligible; Did not Report	294,729	\$6,701
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	123,231	\$834
Excluded for other reasons (Non-eligible clinician type, newly enrolled)	Not applicable	75,836	\$4,442

		CY 2024 PFS Proposed Rule estimates	
Eligibility Status	Predicted Participation Status in MIPS Among Clinicians *	Number of Clinicians	PFS allowed charges (\$ in mil)***
Qualified Participant (QP)***	Not applicable	242,422	\$13,502
Total Number of Clinicians Not MIPS Eligible		921,560	\$31,690
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,741,607	\$91,053

* Participation excludes facility-based clinicians who do not have scores in the 2021 MIPS submission data.

** Allowed charges estimated in 2021 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

*** Our QP estimate differs from that reported in section VII.E.23.b) of this proposed rule because we 2021 data and a different simulation methodology

Furthermore, we estimate there will be approximately 185,342 clinicians who are not MIPS eligible, but could be if the clinician or their group elects to opt-in. We describe this group as “Potentially MIPS eligible” in Table 117. These potentially MIPS clinicians would all be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group, or clinicians in a group that does not submit are eligible to opt-into MIPS individually and choose to do so. We do not expect that every potentially MIPS eligible clinician will elect to submit data to MIPS. We estimate another 294,729 clinicians would be eligible for participation as a group but do not report data. These assumptions are important because they quantify the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1,300,118 clinicians. Finally, we estimate approximately 123,231 clinicians will not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 318,258 will not be MIPS eligible for other reasons, including 242,422 clinicians with QP status.

Eligibility among many clinicians is contingent on submission to MIPS as a group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit

until the submission period for the CY 2023 performance period is closed. For the remaining analysis, we use the estimated population of 820,047 MIPS eligible clinicians described above.

c. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2023 Performance Period/2025 MIPS Payment Year

(1) Summary of Approach for MIPS Value Pathways (MVPs) and Traditional MIPS

In this proposed rule, we present several proposals which impact the measures and activities, the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VII.E.23.d.(3) of this RIA as we describe our methodology to estimate MIPS payments for the CY 2024 performance period/2026 MIPS payment year. We then present the impact of the overall proposed policies in the CY 2024 performance period/2026 MIPS payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2024 performance period/2026 MIPS payment year. By comparing the baseline model to the proposed policies model, we are able to estimate the incremental impact of the proposed policies for the CY 2024 performance period/2026 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, which is calculated based on the clinician's performance on measures and activities under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate as an individual, group, virtual group, APM Entity, clinicians participating in MIPS through the APM Performance Pathway (APP) or through an MVP in the four MIPS performance categories. MIPS APM participants can participate in the APP as an individual, group, virtual group, APM Entity and are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability.

The average percentage change in total revenues that clinicians earn is less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; MIPS does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System, that will not be affected by MIPS payment adjustment factors.

(2) Methodology to Assess Impact for MIPS Value Pathways

In the CY 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MVPs beginning in the CY 2023 performance period/2025 MIPS payment year. In this RIA, we take a similar approach to modeling MVP participation and scoring as described in the CY 2022 PFS final rule (87 FR 70204), incorporating changes to our proposed policies model as described below.

(a) MVP Participant Assumptions

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register prior to submitting an MVP. As we do not yet have information on who will register, we assume for purposes of this model, that MVP Participants are MIPS eligible individual clinicians or groups that currently submit at least four quality measures that are in an MVP. For these MVP Participants, we calculate both an MVP and a traditional MIPS score and take the highest score consistent with the existing scoring hierarchy which was finalized in the CY 2023 PFS final rule (86 FR 65537). For the baseline model, we used the quality measures finalized for MVPs in the CY 2023 PFS final rule Appendix 3: MVP Inventory.

In section IV.A.4.b and Appendix 3 of this proposed rule, we propose modifications to the 12 existing MVPs finalized in the CY 2022 PFS final rule (86 FR 65998 through 66031) and CY 2023 PFS final rule (87 FR 70037) and the consolidation of the previously finalized

Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care.

In section IV.A.4.a of this proposed rule, we are proposing the inclusion of 5 new MVPs

- Focusing on Women’s Health;
- Prevention and Treatment of Infectious Disease Including Hepatitis C and HIV;
- Quality Care in Mental Health and Substance Use Disorder;
- Quality Care for Ear, Nose, and Throat (ENT); and
- Rehabilitative Support for Musculoskeletal Care

For the proposed policies model, we incorporate the quality measure revisions for the existing MVPs and use the quality measures to model scores for the new MVPs in Appendix 3 of this proposed rule.

Our MVP Participant assumptions have limitations: we are not incorporating subgroups due to a lack of data, not all of the assumed participants may elect to register for an MVP, and we may have additional clinicians or groups register for an MVP. However, we believe this is a reasonable approach to simulate the impact of MVPs and we sought comment on this assumption, but did not receive any feedback.

(b) MVP Scoring Methods and Assumptions

We simulate an MVP score using the same data sources as we did for traditional MIPS. We scored according to § 414.1365(d) and § 414.1365(e) using the MVP reporting requirements listed in § 414.1365(c) with one exception. We did not restrict the improvement activities to the activities listed in the MVP inventory. We believed this would lower our estimated MVP score as clinicians and groups were not required to select from a limited inventory in the CY 2021 performance period (upon which our model is based). Therefore, we scored any improvement activities the MVP Participants submitted in 2021 as if those improvement activities are in the MVP inventory.

(3) Methodology to Assess Impact for Traditional MIPS

To estimate the impact of the proposed policies on MIPS eligible clinicians, we generally used the CY 2021 performance period's submissions data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories. As discussed in section VII.E.23.a.(2) of this proposed rule, we supplemented with 2019 data supplement.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2024 performance period/2026 MIPS payment year for the baseline and proposed policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, where each are described in detail in the following sections.

(a) Methodology to Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2023 PFS final rule (87 FR 70205) for the baseline and proposed policies RIA models for the CY 2024 performance period/2026 MIPS payment year.

To create the baseline policies RIA model, which does not reflect the policies proposed in this rule, we made the following modifications to the CY 2023 PFS final rule final policies model to reflect the previously finalized quality performance category policies for the CY 2024 performance period/2026 MIPS payment year:

- As discussed in the CY 2023 PFS final rule (87 FR 70049), we increased the data completeness criteria threshold to at least 75 percent for CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

For the proposed policies model, we did not implement any changes to the quality performance category relative to the baseline model because we use 2021 data and cannot simulate the addition of new measures.

(b) Methodology to Estimate the Cost Performance Category Score

We estimated the cost performance category score using a methodology similar to the methodology described in the CY 2023 PFS final rule (87 FR 70205) for the baseline and the proposed policies RIA models. For this proposed rule, the baseline policies RIA model included the same method used for the final policies RIA model in the CY 2023 PFS final rule (87 FR 70205). Due to technical limitations, we did not model cost improvement scoring in the baseline policies RIA model.

The proposed policies RIA model incorporated and implemented the following changes:

In section IV.A.4.f.(2).(a) of this proposed rule, we proposed 5 new episode-based cost measures.

- In section IV.A.4.g.(1).(c) of this proposed rule, we proposed to:

- ++ Determine cost improvement scoring at the category level;

- ++ Modify how to calculate cost improvement scoring and remove statistical significance requirement; and

- ++ Set the maximum improvement scoring to 1 percentage point, beginning in CY 2023 performance period/2025 MIPS payment year.

(c) Methodology to Estimate the Facility-Based Measurement Scoring

A limitation of using data from the CY 2021 performance period is that we are not able to estimate facility-based scores because there are no Hospital Value-Based Purchasing total performance scores calculated for the performance period due the COVID-19 PHE. However, for clinicians who did not participate in MIPS during the CY 2021 performance period, we did

use the 2019 data supplement to identify final scores based on the CY 2019 performance period submission and these scores include facility-based scores.

(d) Methodology to Estimate the Promoting Interoperability Performance Category Score

We estimated the baseline Promoting Interoperability performance category score by using the same methodology that we used in the CY 2023 PFS final rule (87 FR 70206) final policies. We incorporated the final policies model from that rule into our baseline model. In section IV.A.4.F.(4)(f) of this proposed rule, we proposed to continue reweighting clinical social workers. This is incorporated into our proposed policies model. We did not incorporate changes to the performance period or measure level changes because we are not able to model this using data for the CY 2021 performance period.

(e) Methodology to Estimate the Improvement Activities Performance Category Score

For the baseline and proposed policies model we used the same method to estimate the improvement activities performance category score as described in the CY 2023 PFS final rule (87 FR 70206).

(f) Methodology to Estimate the Complex Patient Bonus Points

For the baseline and proposed policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(g) Methodology to Estimate the Final Score

We did not propose any changes for how we calculated the MIPS final score. Our baseline and proposed policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline policies RIA model, we applied the performance category weights and redistribution weights finalized in the CY 2022 PFS final rule (86 FR 65519 through 65524).

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

(h) Methodology to Estimate the MIPS Payment Adjustment

For the baseline and proposed policies RIA models, we applied the hierarchy as finalized in the CY 2022 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we applied the performance threshold of 75 points finalized in the CY 2023 PFS final rule (87 FR 70097). In section IV.A.4.h.(2) of this proposed rule, we are proposing a performance threshold of 82 points for the CY 2024 performance period/2026 MIPS payment year, which we incorporated into our proposed policies model. For both the baseline and proposed policies models, we used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Impact of Payments

We noticed minimal changes to the mean and median final score between our baseline and proposed policies models. In our baseline model, the mean and median final scores are 73.26 and 79.99 points, respectively. In the proposed policies model, the mean final score is 73.52 and the median final score is 80.53. Many clinicians have scores clustered near the proposed

performance threshold of 82 points. For instance, 51% of clinicians have a final score between 80 and 100 points and 63.28% of clinicians have final score between 75 and 100 points. Because so many clinicians have final scores near our proposed performance threshold, a small change in actual final scores relative to our model would significantly impact the number of clinicians with a positive, neutral, or negative adjustment.

Our proposed policies are expected to increase the number of clinicians receiving a negative adjustment from 36.75 percent of eligible clinicians to 54.31 percent of eligible clinicians, but decrease the average negative adjustment from -2.89 percent to -2.40 percent. This is because the increased performance threshold will cause many clinicians who previously scored slightly above the performance threshold to now score slightly below the performance threshold, shifting their expected payment from a small positive adjustment to a small negative adjustment.

Among MIPS eligible clinicians who reported data, 35.38 percent receive a negative adjustment in our baseline model compared to 52.24 percent in the proposed policies model. Because many clinicians' scores are close to the performance threshold, the payment adjustments for these clinicians are fairly small and many negative adjustments are much lower in magnitude than the statutory maximum negative adjustment of 9 percent. In our proposed policies model, we project the maximum negative payment adjustment of negative 9 percent for clinicians with a score of 20 points or below compared to a score of 18 in our baseline model.

In our baseline model, 2.13 percent of MIPS eligible clinicians and 1.41 percent of clinicians who report clinicians receive the max negative adjustment. In our proposed rule model, 1.99 percent of MIPS eligible clinicians and 1.19 percent of clinicians who report data receive the max negative adjustment. This is because, while the range of scores subject to the maximum negative adjustment increases slightly (from 18 to 20 points), slightly fewer clinicians in our proposed policies model have a final score below 20 points compared to the baseline model.

The increase in the number of clinicians receiving a negative score will contribute to an increase in the size of the budgetary dollars available, as a result of the budget neutral nature of the program. In the baseline model, we anticipate redistributing \$7.4 million and, in the proposed policies model we anticipate, redistributing \$8.9 million as a result of budget neutrality.

Because of this increase in the size of the budget neutral pool, the size of our positive payment adjustments increases. In our baseline model, the average positive payment adjustment is 1.99 percent among MIPS eligible clinicians. In the CY 2024 performance period/2026 MIPS payment year proposed policies model, the average positive payment adjustment is 3.35 percent among MIPS eligible clinicians. The maximum positive payment adjustment increased from 4.60 percent in the baseline model to 8.82 percent in the proposed rule model.

We want to highlight that we are primarily using submissions data for the CY 2021 performance period to simulate a final score for the CY 2024 performance period/2026 MIPS payment year, and it is likely that there will be changes that we cannot account for at this time. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2023 performance period/2025 MIPS payment year. This is because the PHE may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for the CY 2019 and CY 2021 performance periods. Therefore, engagement levels in MIPS for the CY 2024 performance period/2026 MIPS payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the CY 2021 performance period/2023 MIPS payment year, which is associated with a performance threshold of 60 points.

TABLE 118: Estimated Proportion of Eligible Clinicians with a Positive or Neutral and a Negative Payment Adjustment CY 2024 Performance Period/2026 MIPS Payment year by Practice Size

Practice Size*	Percent Eligible Clinicians with Positive or Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline

FIGURE 4: Distribution of Final Scores in the Baseline and Proposed Policies Model

e. Additional Impacts from Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we are proposing several policies that have an impact on burden in the CY 2024 performance period/2026 MIPS payment year. In section V.B.11. of this proposed rule, we outline estimates of the costs of data collection that includes both the effect of proposed policy updates and adjustments due to the use of updated data sources. For each proposed provision included in this proposed rule which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 121. We also provide proposed additional burden discussions that we are not able to quantify.

TABLE 121: Incremental Burden from Associated Proposed Policies

Burden Description and associated finalized provisions	Burden Hours	Burden Dollars
Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2023 PFS final rule into the CY 2024 performance period/2026 MIPS payment year (as discussed in section V.B.11. of this proposed rule).	630,570	\$71,317,983
Burden change for MVP registration ICR due to the provision of additional MVPs (as discussed in section V.B.11.e.(7)(a) of this proposed rule). *	+321	+\$33,192
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as discussed in section V.B.11.e.(4) of this proposed rule). *	-4,743	-\$530,492
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as discussed in section V.B.11.e.(5) of this proposed rule). *	-3,697	-\$423,093
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as discussed in section V.B.11.e.(6) of this proposed rule). *	-4,344	-\$503,665
Burden change for MVP Quality Submission ICR submissions due to the provision of additional MVPs (as discussed in section V.B.11.e.(7)(a)(iii) of this proposed rule). *	+8,461	+\$964,505
Total change in burden due to policy for CY 2024	-4,002	-\$459,553
Total burden set forth in the CY 2024 PFS proposed rule	626,568	\$70,858,430

* The total change in burden due to this provision includes an increase in burden due to an anticipated increase in the number of respondents that will participate in MVP reporting based on the proposed addition of new MVPs. Therefore, there will be a decrease in burden in the “Quality Data Submission: MIPS CQM and QCDR collection type,” “Quality Data Submission: eCQM collection type,” and “Quality Data Submission: Claims collection type” ICRs due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as a MVP participant. Total change in burden also includes the increase in submission burden due to the increase in the number of respondents for “MVP registration.” See section V.B.11 of this proposed rule.

(2) Additional Impacts to Clinicians

(a) Impact on Third Party Intermediaries

In section IV.A.4.k of this rule, we are proposing to: (1) add requirements for third party intermediaries to obtain documentation; (2) add requirements for third party intermediaries to submit data in the form and manner specified by CMS; (3) specify the use of a simplified self-nomination process for existing QCDRs and qualified registries; (4) add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (5) Add a requirement for QCDRs and qualified registries to attest that information on the qualified posting is correct; (6) Modify requirements for QCDRs and qualified registries

to support MVP reporting; (7) Specify requirements for a transition plan for QCDRs and qualified registries; (8) Specify requirements for data validation execution reports; (9) Add additional criteria for rejecting QCDR measures; (10) Add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (10) eliminate the Health IT vendor category; (11) Add failure to maintain updated contact information as criteria for remedial action; (12) Revise corrective action plan requirements; (13) Specify the process for publicly posting remedial action; and (14) Specify the criteria for audits. Due to the technical nature of these proposed changes, we are unable to quantify the burden for third party intermediaries during the CY 2024 performance period/2026 MIPS payment year. We refer readers to section V.B.11.c of this rule for additional information on proposed changes to the third party intermediary requirements.

(b) Compare Tools: Public Reporting

In section IV.A.4. of this rule, we are proposing to update our policy for identifying clinicians furnishing telehealth services, such that we remain current with CMS coding changes, without proposing and finalizing such coding changes via rulemaking. Specifically, instead of only using place of service (POS) codes 02, 10, or modifier 95 to identify telehealth services furnished for the telehealth indicator, we would use the most recent codes at the time the data are refreshed. We are proposing that at the time of such a data refresh we would publish the details of which codes are used for the telehealth indicator through education and outreach, such as via a fact sheet, listserv, or information posted on the Care Compare: Doctors and Clinicians Initiative page, available at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>. We are proposing to revise the policy to publicly report a subset of the Medicare public use file (PUF) on the Provider Data Catalog (PDC) to instead provide a single downloadable dataset reflecting including the procedure utilization data that would appear on clinician profile pages. We are proposing to modify the existing policy such

that, in addition to the two previously finalized sources (Restructured BETOS categorization system and code sources used in MIPS), we may use alternate sources to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists. If we develop new procedure categories for publicly reporting utilization data on clinician profile pages, we are proposing to engage subject matter experts and interested parties through periodic requests for feedback using methods outside of rulemaking, such as but not limited to listserv emails, listening sessions, and focus groups, to solicit feedback on bespoke procedure categories planned for future releases of utilization data, as appropriate and technically feasible. We are also proposing to publicly report aggregated counts of procedures performed by providers based on Medicare Advantage (MA) encounter data (also known as MA risk adjustment data) in addition to Medicare fee-for-service (FFS) utilization data counts; as part of this proposal, we are proposing to amend 42 CFR § 422.310(f) (the regulation that addresses permissible uses and releases of MA risk adjustment data) to permit use of MA encounter data in developing the data posted on the Care Compare website and release of the MA encounter data as part of the data set that will be downloadable from the Care Compare website more quickly than the regulation would currently permit releases of MA encounter data. While the Compare tool provisions do not increase the burden of collections, we note that the PRA package may require relevant modification to reflect the Compare tool's new uses and public display. We refer readers to section IV.A.I of this rule for additional information on the proposed changes to public reporting on Compare tools.

(c) Data Completeness Criteria for the Quality Measures, Excluding the Medicare CQMs

In section IV.A.5.a.(1) of this proposed rule, we are proposing to maintain the data completeness criteria threshold at 75 percent for the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years, and increase the data completeness criteria threshold by 5 percent from 75 percent to 80 percent for the CY 2027 performance period/2029

MIPS payment year. We believe that the proposed policy to maintain the threshold for data completeness at 75 percent for the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years is consistent with the existing data completeness criteria and therefore, would not result in additional burden to the applicable interested parties. We assume that the proposed increase in data completeness criteria threshold from 75 to 80 percent for the CY 2027 performance period/2029 MIPS payment year would not result in substantive burden to the applicable interested parties. We believe that the increase in data completeness criteria threshold would reduce burden for clinicians using EHRs and eCQMs as the collection of eCQM data within the EHR can allow eligible clinicians to report on 100 percent of the eligible population with data in the EHR for a measure. Additionally, we recognize that individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities that continue to utilize other means of data collection for MIPS CQMs, including the collection of MIPS CQM data reported by registries and/or QCDRs, would need have the logic code of their EHRs to be updated to account for the increased data completeness criteria threshold. We believe that increasing the data completeness criteria threshold would not pose a substantial burden to MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, unless they are manually extracting and reporting quality data. We refer readers to section IV.A.4.f.(1)(d) of this rule for additional information on proposed changes to the data completeness threshold criteria.

(d) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.4.f.(3).(b)(ii) of this proposed rule, we are proposing changes to the improvement activities Inventory for the CY 2024 performance period/2026 MIPS payment year and future years as follows: adding five new improvement activities; modifying one existing improvement activity; and removing three previously adopted improvement activities. We refer readers to Appendix 2: Improvement Activities of this proposed rule for further details. We do not believe these proposed changes to the improvement

activities inventory would significantly impact time or financial burden on interested parties because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these proposed changes to the improvement activities inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, would continue to perform the same activities under the policies in this proposed rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2024 performance period/2026 MIPS payment year. We refer readers to section IV.A.4.f.(3)(b) of this rule for additional information on proposed changes to the improvement activities Inventory.

(3) Update to CEHRT Definition for the Medicare Promoting Interoperability Program and the Quality Payment Program

In section III.R of this proposed rule, we propose to update the definitions of CEHRT for the Medicare Promoting Interoperability Program for eligible hospitals and CAHs and for the MIPS Promoting Interoperability performance category. Under this proposal, we would revise the definitions of CEHRT for the Medicare Promoting Interoperability Program at § 495.4, and for the Quality Payment Program at § 414.1305. Specifically, we propose to add a reference to the “Base EHR Definition” where the regulatory text refers to the “2015 Edition Base EHR definition,” remove “2015 Edition” where we reference “2015 Edition health IT certification criteria,” and add a cross-reference to health IT certification criteria at § 170.315. We also propose to specify that technology meeting the CEHRT definitions must meet ONC’s certification criteria at § 170.315, “as adopted and updated by ONC.” We believe that these revisions to the CEHRT definitions, if finalized, would ensure that updates to the definition at §

170.102 and updates to applicable health IT certification criteria in § 170.315 would be incorporated into CEHRT definitions, without requiring additional regulatory action by CMS. Finally, we note that while this proposal is consistent with the approach in ONC's HTI-1 proposed rule (88 FR 23746 through 23917), we do not believe that ONC must finalize their proposed revisions for us to be able to finalize the changes proposed in this section for our regulatory definitions of CEHRT. These changes would not impact EHR requirements in the CY 2024 EHR reporting period or the CY 2024 performance period, and therefore we predict that it would have no impact on clinicians.

f. Assumptions & Limitations

In section VII.E.23.a.(2) of this rule, we outline several limitations in using 2021 submissions data for estimating performance in the CY 2024 performance period/ CY 2026 payment year. In addition, because many scores are clustered between the prior performance threshold of 75 points and the proposed threshold of 82 points, minor variations in actual clinicians final scores relative to our estimations could have significant impacts on the proportion of clinicians receiving a positive or negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2021 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2023 performance period/2025 MIPS payment year. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the proposed policies.

In addition to the limitations described throughout the methodology sections, to the extent that there are year-to-year changes in the data submission, volume, and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 118.

F. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we proposed to exercise agency discretion, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we present above the estimated impact on total allowed charges by specialty.

1. Alternatives Considered Related to the O/O E/M Visit Inherent Complexity Add-on Separate Payment

We considered alternatives to our proposed policy to make separate payment for the O/O E/M visit inherent complexity add-on code, including proposing to maintain our current utilization assumptions. Maintaining our current utilization assumption as finalized in CY 2021 would result in an estimated impact or change to the CF of -3.2 percent (Table 122). However, maintaining the CY 2021 policy utilization assumption would not reflect our proposed limitation on billing of the O/O E/M visit inherent complexity add-on code for services billed with modifier 25 which is used to indicate that the service is billed on the same day as a minor procedure or another E/M visit. It seems likely that visits reported with payment modifiers have resources that are sufficiently distinct from stand-alone office/outpatient E/M visits (85 FR 84571). Interested parties that are unlikely to bill for the O/O E/M visit inherent complexity add-on code have continued to express concerns about potential associated reductions to the CF and redistributive impacts among specialties. Our proposal to better target the add-on code would at least partially allay those concerns. Under our proposed utilization assumption for CY 2024, we estimate the effect of making separate payment for the O/O E/M visit complexity add-on code to be -2.0 percent.

TABLE 122: Estimated Conversion Factor Effect Attributable to the Inherent Complexity Add-on Code

As finalized for CY 2021	-3.2%
As proposed for CY 2024	-2.0%

We also considered proposing not to make separate payment for the O/O E/M visit inherent complexity add-on code for CY 2024, continuing to consider the utilization data, and seeking comment on not making separate payment until CY 2025 instead of CY 2024. While doing so would reduce the change to the CF and the redistributive impacts among specialties our concerns about capturing the work associated with visits that are part of ongoing, comprehensive primary care and/or care management for patients having a single, serious, or complex chronic condition would remain present. We believe separate payment for the O/O E/M visit inherent complexity add-on code will improve accuracy in payment for resource costs inherent to primary care and other medical care services that are part of ongoing care for a patient's single, serious or complex condition in the office setting. This would be particularly important for people without access to such care. We also believe that utilization of high-value preventive services, and promotion of healthy behaviors leveraged by these kinds of longitudinal patient relationships could result in positive patient outcomes and positive health equity impacts. Primary care practitioners and other practitioners who rely heavily on these visit codes and would use the add-on code would likely raise strong objections if CMS did not propose to make separate payment for a code that is intended to address long-standing distortions in PFS payment that CMS has repeatedly acknowledged through notice and comment rulemaking.

2. Alternatives to Provider Enrollment Provisions

We did not consider alternatives to our proposed provider enrollment provisions. We believe these changes are necessary to help ensure that payments are made only to qualified providers and suppliers and/or to increase the efficiency of the Medicare and Medicaid provider enrollment processes.

3. Alternatives Considered Medicare Diabetes Prevention Program

No alternatives were considered. The MDPP flexibilities resulting from the PHE for COVID-19 lasted over 3 years of the initial 5 years of the expanded model. During this time, supplier and beneficiary expectations changed, resulting in the synchronous virtual delivery of healthcare services becoming normalized. Requiring the MDPP expanded model to return to primarily in-person services following over 3 years of synchronous virtual delivery may have an extremely negative impact for both MDPP suppliers and beneficiaries, which could threaten the success of the entire expanded model.

4. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran separate proposed policies RIA models based on the actual mean for the CY 2019 performance period/2021 MIPS payment year with a performance threshold of 86. This model has the same mean and median final score as our proposed policies RIA model since the performance threshold does not change the final score. In our analysis of the alternative performance threshold of 86, 67.20 percent of MIPS eligible clinicians who submitted data would receive a negative payment adjustment.

We also report the findings for the baseline RIA model which describes the impact for the CY 2024 performance period/2026 MIPS payment year if this proposal is not finalized including previous policies including a performance threshold of 75. The baseline RIA model has a mean final score of 73.26 and median final score of 79.99. We estimate that \$741 million would be redistributed based on the budget neutrality requirement. There would be a maximum payment adjustment of 4.60. In addition, 36.75 percent of MIPS eligible clinicians would receive a negative payment adjustment.

G. Impact on Beneficiaries

1. Medicare Shared Savings Program Provisions

As noted previously in this proposed rule, the proposal to cap an ACO's regional service area risk score growth is expected to increase the incentive for ACOs to participate in regions with high risk score growth, improving the incentive for ACOs to join and/or sustain participation when serving regions with increasingly medically complex beneficiaries. Similarly, the proposal to use a uniform approach to calculating both BY and PY prospective HCC risk scores using the same CMS-HCC risk adjustment model(s) is anticipated to increase participation (and reduce the potential for disenrollment) particularly from ACOs serving greater proportions of complex beneficiaries exhibiting high risk scores. The proposal to mitigate the impact of the negative regional adjustments on benchmarks is expected to increase participation from ACOs serving up to 500,000 new assigned beneficiaries per year. The proposal to revise the definition of an assignable beneficiary is expected to allow more than 760,000 additional beneficiaries to be included in the population of assignable beneficiaries, many of whom would be eligible to be assigned to ACOs. In total these proposals are expected to increase participation in the Shared Savings Program over the 2024-2033 period by roughly 10 to 20 percent.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in the MIPS. In addition, ACOs continued to have higher mean performance than their MIPS Group counterparts on all 10 of the CMS Web Interface measures for PY 2021. This includes higher performance for quality measures related to diabetes and blood pressure control; depression screening and depression remission rates; breast, colorectal and falls risk screening rates; and flu vaccination, tobacco screening and smoking cessation, and statin therapy for the treatment and prevention of cardiovascular disease.

Increased participation in the Shared Savings Program will extend ACO care coordination and quality improvement to segments of the beneficiary population that potentially have more to benefit from care management.

2. Quality Payment Program

There are several changes in this proposed rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate the proposed policies in this proposed rule will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the proposed new quality measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

3. Medicare Diabetes Prevention Program

The proposed changes would have a positive impact on eligible MDPP beneficiaries, as it increases the accessibility of MDPP, particularly among beneficiaries residing in rural and underserved areas of the US, where access to a supplier offering in-person Set of MDPP services may not exist or be geographically feasible.

H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's proposed rule will

be the number of reviewers of last year's proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year's proposed rule in detail, and it is also possible that some reviewers will choose not to comment on the proposed rule. For these reasons we believe that the number of commenters will be a fair estimate of the number of reviewers of last year's proposed rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$123.06, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$984.48 (8.0 hours x \$123.06). Therefore, we estimated that the total cost of reviewing this regulation is 22,978,748 (\$984.48 x 23,341 reviewers on last year's proposed rule).

As for the Medicare Diabetes Prevention Program, given that we tried to align this rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts only enrolled MDPP suppliers and eligible beneficiaries who have started the MDPP program or are interested in enrolling in MDPP.

I. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 123 through 125 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2023 to CY 2024 based on the FY 2024 President's Budget baseline.

TABLE 123: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2024 Annualized Monetized Transfers	Estimated decrease in expenditures of \$2.4 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 124: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2024 Annualized Monetized Transfers of beneficiary cost coinsurance.	-\$0.6billion
From Whom to Whom?	Beneficiaries to Federal Government.

TABLE 125: Accounting Statement for Proposals for Medicare Shared Savings Program (CYs 2024-2033)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
Transfers From the Federal Government to ACOs				
Annualized monetized: Discount rate: 7%	-15 million	-171 million	174 million	Tables 109 through 112
Annualized monetized: Discount rate: 3%	-25 million	-189 million	172 million	

Notes: Negative values reflect reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects will be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on July 5, 2023.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, and X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 418

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

42 CFR 422

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Health facilities, Health professions, Medicare Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 455

Fraud, Grant programs—health, Health facilities, Health professions, Investigations, Medicaid, Reporting and recordkeeping requirements.

42 CFR Part 489

Health facilities, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 491

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements, Rural areas.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 498

Administrative practice and procedure, Health facilities, Health professions, Medicare Reporting and recordkeeping requirements.

42 CFR Part 600

Administrative practice and procedure, Health care, Health insurance, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 405-FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

2. Section 405.800 is amended by adding paragraph (d) to read as follows:

§ 405.800 Appeals of CMS or a CMS contractor.

* * * * *

(d) *Scope of supplier.* For purposes of this subpart, the term “supplier” includes all of the following:

- (1) The individuals and entities that qualify as suppliers under § 400.202 of this chapter.
- (2) Physical therapists in private practice.
- (3) Occupational therapists in private practice.
- (4) Speech-language pathologists.

3. Section 405.2401 is amended by adding the definition of “Marriage and family therapist (MFT)” and “Mental health counselor (MHC)” to paragraph (b) in alphabetical order to read as follows:

§ 405.2401 Scope and definitions.

* * * * *

(b) * * *

Marriage and family therapist (MFT) means an individual who meets the applicable education, training, and other requirements of § 410.53 of this chapter.

* * * * *

Mental health counselor (MHC) means an individual who meets the applicable education, training, and other requirements of § 410.54 of this chapter.

* * * * *

4. Section 405.2411 is amended by revising paragraphs (a)(4), (a)(6), and (b)(2) to read as follows:

§ 405.2411 Scope of benefits.

(a) * * *

(4) Services and supplies furnished as incident to the services of a nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

* * * * *

(6) Clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services as specified in § 405.2450.

(b) * * *

(2) Covered when furnished during a Part A stay in a skilled nursing facility only when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor employed or under contract with the RHC or FQHC at the time the services are furnished;

* * * * *

5. Section 405.2413 is amended by revising paragraph (a)(5) to read as follows:

§ 405.2413 Services and supplies incident to a physician's services.

(a) * * *

(5) Furnished under the direct supervision of a physician, except that services and supplies furnished incident to Transitional Care Management, General Care Management, the Psychiatric Collaborative Care Model, and behavioral health services can be furnished under general supervision of a physician when these services or supplies are furnished by auxiliary personnel, as defined in § 410.26(a)(1) of this chapter.

* * * * *

6. Section 405.2415 is amended by--

a. Revising paragraphs (a) introductory text, (a)(3), and (a)(5) and

b. Adding paragraphs (b)(6) and (7).

The revisions and additions read as follows:

§ 405.2415 Incident to services and direct supervision.

(a) Services and supplies incident to the services of a nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor are payable under this subpart if the service or supply is all of the following:

* * * * *

(3) Furnished as an incidental, although integral part of professional services furnished by a nurse practitioner, physician assistant, certified nurse-midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

* * * * *

(5) Furnished under the direct supervision of a nurse practitioner, physician assistant, or certified nurse-midwife, except that services and supplies furnished incident to Transitional Care Management, General Care Management, the Psychiatric Collaborative Care model, and behavioral health services can be furnished under general supervision of a nurse practitioner, physician assistant, or certified nurse-midwife, when these services or supplies are furnished by auxiliary personnel, as defined in § 410.26(a)(1) of this chapter.

(b) * * *

(6) Marriage and family therapist.

(7) Mental health counselor.

* * * * *

7. Section 405.2446 is amended by revising paragraphs (b)(5) and (6) to read as follows:

§ 405.2446 Scope of services.

* * * * *

(b) * * *

(5) Clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services specified in § 405.2450.

(6) Services and supplies furnished as incident to the services of a clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor, as specified in § 405.2452.

* * * * *

8. Section § 405.2448 is amended by revising paragraphs (a)(2) introductory text and (a)(2)(i) to read as follows:

§ 405.2448 Preventive primary services.

(a) * * *

(2) Are furnished by a or under the direct supervision of a physician, nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor employed by or under contract with the FQHC.

(i) By a or under the direct supervision of a physician, nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor; or

* * * * *

9. Section 405.2450 is amended by revising the section heading and paragraphs (a) introductory text, (a)(2), (a)(3), and (c) to read as follows:

§ 405.2450 Clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services.

(a) For clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor professional services to be payable under this subpart, the services must

be -

* * * * *

(2) Of a type that the clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor who furnishes the services is legally permitted to perform by the State in which the service is furnished;

(3) Performed by a clinical social worker, clinical psychologist, marriage and family therapist, or mental health counselor who is legally authorized to perform such services under State law or the State regulatory mechanism provided by the law of the State in which such services are performed; and

* * * * *

(c) The services of clinical psychologists, clinical social workers, marriage and family therapist, or mental health counselors are not covered if State law or regulations require that the services be performed under a physician's order and no such order was prepared.

10. Section 405.2452 is amended by revising the section heading, and paragraphs (a) introductory text, (a)(3), (a)(5) and (b) to read as follows:

§ 405.2452 Services and supplies incident to clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services.

(a) Services and supplies incident to a clinical psychologist's, clinical social worker's, marriage and family therapist's, and mental health counselor's services are reimbursable under this subpart if the service or supply is –

* * * * *

(3) Furnished as an incidental, although integral part of professional services furnished by a clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor;

* * * * *

(5) Furnished under the direct supervision of a clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

(b) The direct supervision requirement in paragraph (a)(5) of this section is met only if the clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor is permitted to supervise such services under the written policies governing the FQHC.

11. Section 405.2463 is amended by—

- a. Adding paragraphs (a)(1)(i)(I) and (a)(1)(i)(J);
- b. Revising paragraph (b)(3) introductory text;
- c. Redesignating paragraph (b)(3)(iii) as paragraph (b)(3)(v); and
- d. Adding paragraphs (b)(3)(iii) and (b)(3)(iv).

§ 405.2463 What constitutes a visit.

(a) * * *

(1) * * *

(i) * * *

(I) Marriage and family therapist.

(J) Mental health counselor.

* * * * *

(b) * * *

(3) A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service, beginning January 1, 2025, furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months

while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

* * * * *

(iii) Marriage and family therapist.

(iv) Mental health counselor.

* * * * *

12. Section 405.2464 is amended by revising paragraph (c) to read as follows:

* * * * *

(c) *Payment for care management services.* For chronic care management services furnished between January 1, 2016 and December 31, 2017, payment to RHCs and FQHCs is at the physician fee schedule national non-facility payment rate. For care management services furnished between January 1, 2018 and December 31, 2023, payment to RHCs and FQHCs is at the rate set for each of the RHC and FQHC payment codes for care management services. For general care management services furnished on or after January 1, 2024, the payment amount is based on a weighted average of the services that comprise HCPCS code G0511 using the most recently available PFS utilization data.

* * * * *

13. Section 405.2468 is amended by revising paragraphs (b)(1), (b)(3), and (d)(2)(ii) to read as follows:

§ 405.2468 Allowable costs.

* * * * *

(b) * * *

(1) Compensation for the services of a physician, physician assistant, nurse practitioner, certified nurse-midwife, visiting registered professional or licensed practical nurse, clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor who owns, is employed by, or furnishes services under contract to a FQHC or RHC.

* * * * *

(3) Costs of services and supplies incident to the services of a physician, physician assistant, nurse practitioner, nurse-midwife, qualified clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

* * * * *

(d) * * *

(2) * * *

(ii) Services of physicians, physician assistants, nurse practitioners, nurse-midwives, visiting nurses, qualified clinical psychologists, clinical social workers, marriage and family therapists, and mental health counselors.

* * * * *

14. Section 405.2469 is amended by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in §

405.2463. Additionally, beginning January 1, 2025, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

15. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

16. Section 410.10 is amended by revising paragraph (l) and adding paragraphs (z) and (aa) to read as follows:

§ 410.10 Medical and other health services: Included services.

* * * * *

(l) Pneumococcal, influenza, and COVID-19 vaccines (or monoclonal antibodies used for preexposure prophylaxis of COVID-19) and their administration.

* * * * *

(z) Marriage and Family Therapist services, as provided in § 410.53.

(aa) Mental Health Counselor services, as provided in § 410.54.

17. In § 410.15 amend paragraph (a) by:

a. In the definition of “First annual wellness visit providing personalized prevention plan services”:

i. Redesignating paragraph (xiii) as paragraph (xiv); and

ii. Adding a new paragraph (xiii).

b. In the definition of “Subsequent annual wellness visit providing personalized prevention plan services”:

i. Redesignating paragraph (xi) as paragraph (xii); and

ii. Adding a new paragraph (xi).

The additions read as follows:

§ 410.15 Annual wellness visits providing Personalized Prevention Plan Services:

Conditions for and limitations on coverage.

(a) * * *

First annual wellness visit providing personalized prevention plan services * *

*

(xiii) At the discretion of the health professional and beneficiary, furnish a Social Determinants of Health Risk Assessment that is standardized, evidence-based, and furnished in a manner that all communication with the patient is appropriate for the beneficiary’s educational, developmental, and health literacy level, and is culturally and linguistically appropriate.

* * * * *

Subsequent annual wellness visit providing personalized prevention plan services *

* *

(xi) At the discretion of the health professional and beneficiary, furnish a Social Determinants of Health Risk Assessment that is standardized, evidence-based, and furnished in a manner that all communication with the patient is appropriate for the beneficiary’s educational, developmental, and health literacy level, and is culturally and linguistically appropriate.

* * * * *

18. Amend § § 410.18 by:

a. In paragraph (a):

(i) In the definition of “Diabetes” removing the text “diagnosed using the following criteria: a fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2-hour post-glucose challenge greater than or equal to 200 mg/dL on two different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes”; and

(ii) Removing the definition of “Pre-diabetes”.

b. Redesignating paragraph (c)(3) as paragraph (c)(4) and adding a new paragraph (c)(3);
and

c. Revising paragraph (d).

The revisions and addition read as follows:

§ 410.18 Diabetes screening tests.

(a) * * *

Diabetes means diabetes mellitus, a condition of abnormal glucose metabolism.

* * * * *

(c) * * *

(3) Hemoglobin A1C test.

(d) *Amount of testing covered.* Medicare covers two tests within the 12-month period following the date of the most recent diabetes screening test of that individual.

* * * * *

§ 410.32 [Amended]

19. Section 410.32 is amended by revising paragraphs (a)(2) and (b)(3)(ii) to read as follow:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests:

Conditions.

(a) * * *

(2) *Application to nonphysician practitioners.* Nonphysician practitioners (that is, clinical nurse specialists, clinical psychologists, clinical social workers, marriage and family therapists, mental health counselors, nurse-midwives, nurse practitioners, and physician assistants) who furnish services that would be physician services if furnished by a physician, and who are operating within the scope of their authority under State law and within the scope of their Medicare statutory benefit, may be treated the same as physicians treating beneficiaries for the purpose of this paragraph.

* * * * *

(b) * * *

(3) * * *

(ii) *Direct supervision* in the office setting means the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician (or other supervising practitioner) must be present in the room when the procedure is performed. Through December 31, 2024, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

20. Section § 410.33 is amended by revising paragraph (g)(2) to read as follows:

§ 410.33 Independent diagnostic testing facility.

* * * * *

(g) * * *

(2) Provides complete and accurate information on its enrollment application. Changes in ownership, changes of location (including additions and deletions of locations), changes in general supervision, and adverse legal actions must be reported to the Medicare fee-for-service

contractor on the Medicare enrollment application within 30 calendar days of the change. All other changes to the enrollment application must be reported within 90 days.

* * * * *

21. Amend § 410.47 by:

a. In paragraph (a):

- i. Adding the definition of “Nonphysician practitioner” in alphabetical order;
 - ii. Revising the definitions of “Pulmonary rehabilitation” and “Supervising physician”;
- b. Revising paragraphs (b)(3)(ii)(A) and (d) introductory text; and
- c. Removing paragraph (d)(3).

The addition and revisions read as follows:

§ 410.47 Pulmonary rehabilitation program: Conditions of coverage.

(a) * * *

Nonphysician practitioner means a physician assistant, nurse practitioner, or clinical nurse specialist as those terms are defined in section 1861(aa)(5)(A) of the Act.

* * * * *

Pulmonary rehabilitation means a physician or nonphysician practitioner supervised program for COPD and certain other chronic respiratory diseases designed to optimize physical and social performance and autonomy.

Supervising practitioner means a physician or nonphysician practitioner that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under pulmonary rehabilitation programs.

* * * * *

(b) * * *

(3) * * *

(ii) * * *

(A) A physician or nonphysician practitioner immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician or nonphysician practitioner meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

* * * * *

(d) *Supervising practitioner standards.* Physicians or nonphysician practitioners acting as the supervising practitioner must possess all of the following:

* * * * *

22. Amend § 410.49 by:

a. In paragraph (a):

i. Revising the definitions of “Cardiac rehabilitation” and “Intensive cardiac rehabilitation (ICR) program”;

ii. Adding the definition of “Nonphysician practitioner” in alphabetical order; and

iii. Revising the definition of “Supervising physician”;

b. Revising paragraphs (b)(3)(ii) and (e) introductory text; and

c. Removing paragraph (e)(3).

The revisions and addition read as follows:

§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program:

Conditions of coverage.

(a) * * *

Cardiac rehabilitation (CR) means a physician or nonphysician practitioner supervised program that furnishes physician prescribed exercise, cardiac risk factor modification, psychosocial assessment, and outcomes assessment.

* * * * *

Intensive cardiac rehabilitation (ICR) program means a physician or nonphysician practitioner supervised program that furnishes cardiac rehabilitation and has shown, in peer-reviewed published research, that it improves patients' cardiovascular disease through specific outcome measurements described in paragraph (c) of this section.

* * * * *

Nonphysician practitioner means a physician assistant, nurse practitioner, or clinical nurse specialist as those terms are defined in section 1861(aa)(5)(A) of the Act.

* * * * *

Supervising practitioner means a physician or nonphysician practitioner that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under cardiac rehabilitation and intensive cardiac rehabilitation programs.

(b) * * *

(3) * * *

(ii) All settings must have a physician or nonphysician practitioner immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician or nonphysician practitioner meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

* * * * *

(e) *Supervising practitioner standards.* Physicians or nonphysician practitioners acting as the supervising practitioner must possess all of the following:

* * * * *

23. Add § 410.53 to subpart B to read as follows:

§ 410.53 Marriage and family therapist services.

(a) *Definition: marriage and family therapist.* For purposes of this part, a marriage and family therapist is defined as an individual who -

(1) Possesses a master's or doctor's degree which qualifies for licensure or certification as a marriage and family therapist pursuant to State law of the State in which such individual furnishes the services defined as marriage and family therapist services;

(2) After obtaining such degree, has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in marriage and family therapy in an appropriate setting such as a hospital, SNF, private practice, or clinic; and

(3) Is licensed or certified as a marriage and family therapist by the State in which the services are performed.

(b) *Covered marriage and family therapist services.* Medicare Part B covers marriage and family therapist services.

(1) *Definition: marriage and family therapist services* means services furnished by a marriage and family therapist (as defined in paragraph (a) of this section) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the marriage and family therapist is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. The services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician's professional service and must meet the requirements of this section.

(2) *Exception.* The following services are not marriage and family therapist services for purposes of billing Medicare Part B under the MFT and MHC statutory benefit category:

(i) Services furnished by a marriage and family therapist to an inpatient of a Medicare-participating hospital.

(ii) [Reserved]

(c) *Prohibited billing.* (1) A marriage and family therapist may not bill Medicare for the services specified in paragraph (b)(2) of this section.

(2) A marriage and family therapist or an attending or primary care physician may not bill Medicare or the beneficiary for the consultation that is required under paragraph(b)(2) of this section.

24. Add § 410.54 to subpart B to read as follows:

§ 410.54 Mental health counselor services.

(a) *Definition: mental health counselor.* For purposes of this part, a *mental health counselor* is defined as an individual who -

(1) Possesses a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under the State law of the State in which such individual furnishes the services defined as mental health counselor services;

(2) After obtaining such a degree, has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in mental health counseling in an appropriate setting such as a hospital, SNF, private practice, or clinic; and

(3) Is licensed or certified as a mental health counselor, clinical professional counselor, or professional counselor by the State in which the services are performed.

(b) *Covered mental health counselor services.* Medicare Part B covers mental health counselor services.

(1) *Definition: Mental health counselor services* means services furnished by a mental health counselor (as defined in paragraph (a) of this section) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the mental health counselor is legally authorized to perform under State law (or the State regulatory

mechanism provided by State law) of the State in which such services are furnished. The services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician's professional service and must meet the requirements of this section.

(2) *Exception.* The following services are not mental health counselor services for purposes of billing Medicare Part B:

(i) Services furnished by a mental health counselor to an inpatient of a Medicare-participating hospital.

(ii) [Reserved]

(c) *Prohibited billing.* (1) A mental health counselor may not bill Medicare for the services specified in paragraph (b)(2) of this section.

(2) A mental health counselor or an attending or primary care physician may not bill Medicare or the beneficiary for the consultation that is required under paragraph(b)(2) of this section.

25. Section 410.57 is amended by revising paragraph (c) to read as follows:

§ 410.57 Preventive vaccines.

* * * * *

(c) Medicare Part B pays for the COVID-19 vaccine (or monoclonal antibodies used for pre-exposure prophylaxis of COVID-19) and its administration.

* * * * *

26. Section 410.59 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

* * * * *

(a) * * *

(3) * * *

(ii) By, or under the direct supervision (or as specified otherwise) of, an occupational therapist in private practice as described in paragraph (c) of this section; or

* * * * *

(c) * * *

(2) *Supervision of occupational therapy services.* Except as otherwise provided in this paragraph, occupational therapy services are performed by, or under the direct supervision of, an occupational therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, directly supervised by the therapist, and included in the fee for the therapist's services. Remote therapeutic monitoring services may be performed by an occupational therapy assistant under the general supervision of the occupational therapist in private practice; services performed by an unenrolled occupational therapist must be under the direct supervision of the occupational therapist.

* * * * *

27. Section 410.60 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

* * * * *

(a) * * *

(3) * * *

(ii) By, or under the direct supervision (or as specified otherwise) of, a physical therapist in private practice as described in paragraph (c) of this section; or

* * * * *

(c) * * *

(2) *Supervision of physical therapy services.* Except as otherwise provided in this paragraph, physical therapy services are performed by, or under the direct supervision of, a

physical therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, directly supervised by the therapist, and included in the fee for the therapist's services. Remote therapeutic monitoring services may be performed by a physical therapist assistant under the general supervision of the physical therapist in private practice; services performed by an unenrolled physical therapist must be under the direct supervision of the physical therapist.

* * * * *

§ 410.67 [Amended]

28. In § 410.67 amend paragraph (vii) in the definition of “Opioid use disorder treatment service” in paragraph (b) by removing the reference “through the end of CY 2023” and adding in its place the reference “through the end of CY 2024”.

29. Section 410.72 is amended by revising paragraph (d) to read as follows:

§ 410.72 Registered dietitians’ and nutrition professionals’ services.

* * * * *

(d) *Professional services.* Except for DSMT services furnished as, or on behalf of, an accredited DSMT entity, registered dietitians and nutrition professionals can be paid for their professional MNT services only when the services have been directly performed by them.

* * * * *

30. Section 410.78 is amended by—

- a. Adding paragraphs (b)(2)(x) through (xii);
- b. Revising paragraphs (b)(3)(xiv) introductory text, (b)(4)(iv)(D), and (e)(1); and
- c. Adding paragraph (e)(3).

The additions and revisions read as follows:

§ 410.78 Telehealth services.

* * * * *

(b) * * *

(2) * * *

(x) Any distant site practitioner who can appropriately report diabetes self-management training services may do so on behalf of others who personally furnish the services as part of the DSMT entity.

(xi) A marriage and family therapist as described in 410.53.

(xii) A mental health counselor as described in 410.54.

(3) * * *

(xiv) The home of a beneficiary for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder for services that are furnished during the period beginning on the first day after the end of the emergency period as defined in our regulation at § 400.200 and ending on December 31, 2024 except as otherwise provided in this paragraph. Payment will not be made for a telehealth service furnished under this paragraph unless the following conditions are met:

(4) * * *

(iv) * * *

(D) Services furnished on or after January 1, 2025 for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and within 6 months of any subsequent telehealth service.

* * * * *

(e) * * *

(1) A clinical psychologist and a clinical social worker, a marriage and family therapist (MFT), and a mental health counselor (MHC) may bill and receive payment for individual psychotherapy via a telecommunications system, but may not seek payment for medical evaluation and management services.

* * * * *

(3) The distant site practitioner who reports the DSMT services may bill and receive payment when a professional furnishes injection training for an insulin-dependent patient using interactive telecommunications technology when such training is included as part of the DSMT plan of care referenced at § 410.141(b)(2).

* * * * *

31. Amend § 410.79 by:

a. In paragraph (b):

i. Adding the definition of “Combination delivery” in alphabetical order;

ii. Removing the definition of “Core maintenance session interval”;

iii. Adding the definitions of “Distance learning”, “Extended flexibilities”, “Extended flexibilities period”, and “Full-Plus CDC DPRP recognition” in alphabetical order;

iv. Revising the definitions of “Make-up session”, “MDPP services period”, and “MDPP session”

v. Adding the definition “Online delivery” in alphabetical order;

vi. Removing the definition of “Ongoing maintenance sessions”;

vii. Adding the definition of “Virtual session” in alphabetical order.

b. By removing paragraphs (c)(1)(ii) and (iii);

c. By redesignating paragraph (c)(1)(iv) as paragraph (c)(1)(ii);

d. By revising paragraphs (c)(2)(i)(A) and (B);

e. By removing and reserving paragraph (c)(2)(ii);

- f. By revising paragraph (c)(3)(i);
- g. By removing and reserving paragraph (c)(3)(ii); removing paragraph (c)(3)(iii), removing and reserving paragraphs (d)(2)(iii)(B) and (d)(3)(ii);
- h. Revising paragraphs (e)(3)(iv) introductory text, (e)(3)(iv)(D), (e)(3)(iv)(F)(1) and (2).

The additions and revisions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(b) * * *

Combination delivery. MDPP sessions that are delivered by trained Coaches and are furnished in a manner consistent with the DPRP Standards for distance learning and in-person sessions for each individual participant.

* * * * *

Distance learning refers to an MDPP session that is delivered by trained Coaches via remote classroom and is furnished in a manner consistent with the DPRP Standards for distance learning sessions. The Coach provides live (synchronous) delivery of session content in one location and participants call-in or video-conference from another location.

Extended flexibilities refer to the flexibilities as described in paragraphs (e)(3)(iii) and (iv) of this section.

Extended flexibilities period refers to the 4-year period (January 1, 2024 to December 31, 2027) for the Extended flexibilities to apply.

* * * * *

Full-Plus CDC DPRP recognition refers to organizations that have met the Full CDC DPRP recognition, and at the time full recognition is achieved, has met the following retention criterion: Eligible participants in the evaluation cohort must have been retained at the following

percentages: A minimum of 50 percent at the beginning of the fourth month since the cohorts held their first sessions; A minimum of 40 percent at the beginning of the seventh month since the cohorts held their first sessions; and A minimum of 30 percent at the beginning of the tenth month since the cohorts held their first sessions.

* * * * *

Make-up session means a core session or a core maintenance session furnished to an MDPP beneficiary when the MDPP beneficiary misses a regularly scheduled core session or core maintenance session.

MDPP services period means the time period, beginning on the date an MDPP beneficiary attends his or her first core session, over which the Set of MDPP services is furnished to the MDPP beneficiary, to include the core services period described in paragraph (c)(2)(i) and, subject to paragraph (c)(3) of this section.

MDPP session means a core session or a core maintenance session.

* * * * *

Online delivery refers to an MDPP session that is delivered online for all participants and is furnished in a manner consistent with the DPRP Standards for online sessions. The program is experienced through the Internet via phone, tablet, laptop, in an asynchronous classroom where participants are experiencing the content on their own time without a live Coach teaching the content. However, live Coach interaction should be provided to each participant no less than once per week during the first 6 months and once per month during the second 6 months. E-mails and text messages can count toward the requirement for live coach interaction as long as there is bi-directional communication between coach and participant.

* * * * *

Virtual session refers to an MDPP session that is not furnished in person and that is furnished in a manner consistent with the DPRP standards for distance learning sessions.

(c) * * *

(2) * * *

(i) * * *

(A) Up to 16 core sessions offered at least 1 week apart during months 1 through 6 of the MDPP services period; and

(B) Up to 6 core maintenance sessions offered at least 1 month apart during months 7 through 12 of the MDPP services period

(ii) [Reserved]

(3) * * *

(i) The MDPP services period ends upon completion of the core services period described in paragraph (c)(2)(i) of this section.

* * * * *

(e) * * *

(3) * * *

(iv) The virtual session limits described in paragraphs (d)(2) and (d)(3)(i) and (ii) of this section do not apply, and MDPP suppliers may provide all MDPP sessions virtually, through distance learning or a combination of in-person or distance learning, during the PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event. If the beneficiary began the MDPP services period virtually, or changed from in-person to virtual services during the Extended flexibilities period, a PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event, he/she may continue to receive the Set of MDPP services virtually even after the PHE or 1135 waiver event has concluded, until the end of the beneficiary’s MDPP services period, so long as the provision of virtual services complies with all of the following requirements:

* * * * *

(D) Virtual sessions are furnished in a manner consistent with the DPRP standards for distance learning sessions.

* * * * *

(F) * * *

(1) Up to 16 virtual sessions offered weekly during the core session period, months 1 through 6 of the MDPP services period;

(2) Up to 6 virtual sessions offered monthly during the core maintenance session interval periods, months 7 through 12 of the MDPP services period.

* * * * *

§ 410.130 [Amended]

32. Amend § 410.130 in the definition of “Diabetes” by removing the text “diagnosed using the following criteria: A fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2 hour post-glucose challenge greater than or equal to 200 mg/dL on 2 different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes”.

§ 410.140 [Amended]

33. Amend § 410.140 in the definition of “Diabetes” by removing the text “diagnosed using the following criteria: A fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2 hour post-glucose challenge greater than or equal to 200 mg/dL on 2 different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes”.

34. Amend § 410.150 by adding paragraphs (b)(21) and (22) to read follows:

§ 410.150 To whom payment is made.

* * * * *

(b) * * *

(21) To a marriage and family therapist on the individual's behalf for marriage and family therapist services.

(22) To a mental health counselor on the individual's behalf for mental health counseling services.

35. Section 410.152 is amended by:

a. Revising paragraphs (b) introductory text, (h)(2) and (h)(3), (h)(4) introductory text, (h)(5); and

b. Adding paragraphs (m) and (n).

The revisions and additions read as follows:

§ 410.152 Amounts of payment.

* * * * *

(b) *Basic rules for payment.* Except as specified in paragraphs (c) through (h) and (m) and (n) of this section, Medicare Part B pays the following amounts:

* * * * *

(h) * * *

(2) For the administration of a COVID-19 vaccine:

(i) Effective January 1, 2022, for administration of a COVID-19 vaccine, \$40 per dose.

(ii) For services furnished on or after January 1 of the year following the year in which the Secretary ends the March 27, 2020 Emergency Use Authorization declaration for drugs and biologicals (issued at 85 FR 18250) pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb-3), for administration of a COVID-19 vaccine, an amount equal to the amount that would be paid for the administration of a preventive vaccine described in paragraph (h)(1) of this section.

(3) Subject to conditions specified in this paragraph, in addition to the payment described in paragraph (h)(1) or (2) of this section, an additional payment for preventive vaccine

administration in the patient's home:

(i) Effective January 1, 2022 for administration of a COVID-19 vaccine in the home, an additional payment of \$35.50.

(ii) Effective January 1, 2024, for the administration of one or more of the preventive vaccines described in paragraphs (h)(1) and (2) of this section in the home, a payment equal to that of the payment in paragraph (h)(3)(i) of this section.

(iii) An additional payment for preventive vaccine administration in the home can be made if:

(A) The patient has difficulty leaving the home, or faces barriers to getting a vaccine in settings other than their home.

(B) The sole purpose of the visit is to administer one or more preventive vaccines.

(C) The home is not an institution that meets the requirements of sections 1861(e)(1), 1819(a)(1), or 1919(a)(1) of the Act, or §§ 409.42(a) of this subchapter.

(4) The payment amount for the administration of a preventive vaccine described in paragraphs (h)(1) and (2) of this section, and the additional payment for the administration of a preventive vaccine in the home as described in paragraph (h)(3) of this section, is adjusted to reflect geographic cost variations:

* * * * *

(5) For services furnished on or after January 1, 2023, the payment amount for administration of a preventive vaccine described in paragraphs (h)(1) and (2) of this section, and the additional payment for the administration of a preventive vaccine in the home as described in paragraph (h)(3) of this section, is updated annually using the percentage change in the Medicare Economic Index (MEI), as described in section 1842(i)(3) of the Act and § 405.504(d) of this subchapter.

* * * * *

(m) *Amount of payment: Rebatable drugs.* In the case of a rebatable drug (as defined in section 1847A(i)(2)(A) of the Act), including a selected drug (as defined in section 1192(c) of the Act), furnished by providers on or after April 1, 2023, in a calendar quarter during which the payment amount for such drug as specified in section 1847A(i)(3)(A)(ii)(I)(aa) or (bb), as applicable, exceeds the inflation-adjusted amount (as defined in section 1847A(i)(3)(C) of the Act) for such drug, Medicare Part B pays, subject to the deductible, the difference between the allowed payment amount determined under section 1847A of the Act and 20 percent of the inflation-adjusted amount, which is applied as a percent to the payment amount for such calendar quarter.

(n) *Amount of payment: Insulin furnished through an item of durable medical equipment.* For insulin furnished on or after July 1, 2023 through an item of durable medical equipment (as defined in § 414.202), Medicare Part B pays the difference between the applicable payment amount for such insulin and the coinsurance amount, with the coinsurance amount not to exceed \$35 for a month's supply.

PART 411 - EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

36. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w-101 through 1395w-152, 1395hh, and 1395nn.

37. Section 411.15 is amended by revising paragraph (i)(3)(i)(A) to read as follows:

§ 411.15 Particular services excluded from coverage.

* * * * *

(i) * * *

(3) * * *

(i) * * *

(A) Dental or oral examination performed as part of a comprehensive workup prior to,

and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the following Medicare-covered services: organ transplant, hematopoietic stem cell transplant, bone marrow transplant, cardiac valve replacement, valvuloplasty procedures, chemotherapy when used in the treatment of cancer, chimeric antigen receptor (CAR) T-cell therapy when used in the treatment of cancer, administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer, and radiation, chemotherapy, and surgery when used in the treatment of head and neck cancer.

* * * * *

PART 414 - PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

38. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(1).

39. Section 414.53 is added to read as follows:

§ 414.53 Fee schedule for clinical social worker, marriage and family therapist, and mental health counselor services.

The fee schedule for clinical social worker, marriage and family therapist, and mental health counselor services is set at 75 percent of the amount determined for clinical psychologist services under the physician fee schedule.

40. Amend § 414.84 by:

a. In paragraph (a):

i. Adding the definition of “Attendance payment” in alphabetical order;

ii. Revising the definition of “Performance goal”;

b. Revising paragraph (b) introductory text;

c. Removing paragraphs (b)(1) through (5);

d. Redesignating paragraphs (b)(6) and (7) as paragraphs (b)(1) and (2), respectively;

e. Revising newly redesignated paragraphs (b)(1) paragraph heading and (b)(1)(i);

- f. Adding paragraph (b)(1)(iii);
- g. Revising newly redesignated paragraphs (b)(2) paragraph heading and (b)(2)(i);
- h. Redesignating paragraphs (c) and (d) as paragraphs (d) and (e), respectively;
- i. Adding new paragraph (c); and
- j. Revising newly redesignated paragraphs (d)(1) and (e).

The additions and revisions read as follows:

§ 414.84 Payment for MDPP Services.

(a) * * *

Attendance payment means a payment that is made to an MDPP supplier for furnishing services to an MDPP beneficiary when the MDPP beneficiary attends an MDPP core or core maintenance session. CMS will allow up to 22 sessions (alone or in combination with other codes, not to exceed 22 sessions in a 12- month timeframe).

* * * * *

Performance goal means a weight loss goal that an MDPP beneficiary must achieve during the MDPP services period for an MDPP supplier to be paid a performance payment.

* * * * *

(b) *Performance payment.* CMS makes one or more types of performance payments to an MDPP supplier as specified in this paragraph (b). Each type of performance payment is made only if the beneficiary achieves the applicable performance goal and only once per MDPP beneficiary. A performance payment is made only on an assignment-related basis in accordance with § 424.55 of this chapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make a performance payment only to an MDPP supplier that complies with all applicable enrollment and program requirements and only for MDPP services that are furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility

end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session. The two types of performance payments are as follows:

(1) *Performance Goal 1: Achieves the required minimum 5-percent weight loss.* * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2024 through December 31, 2024 the amount is \$145.

* * * * *

(iii) If the beneficiary maintains the required minimum weight loss during a core maintenance session, as measured in-person or described in § 410.79(e)(3)(iii) the amount is \$8.

(2) *Performance Goal 2: Achieves 9-percent weight loss.* * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2024 through December 31, 2024. \$25.

* * * * *

(c) *Attendance payment: Attends a core session or core maintenance session.* CMS makes a payment to an MDPP supplier if an MDPP beneficiary attends a core session or core maintenance session. An attendance payment is made only on an assignment-related basis in accordance with § 424.55 of this chapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make an attendance payment only to an MDPP supplier that complies with all applicable enrollment and program requirements and only for MDPP services that are furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session.

(1) The first core session attended, which initiates the MDPP services period, and that first core session was furnished by that supplier.

(2) For the Extended flexibilities period described in § 410.79(e)(2)(iii), the distance learning HCPCS G-code applies for any Set of MDPP services that are delivered by distance learning, as described in § 410.79(b).

(3) Medicare pays for up to 22 sessions in a 12-month period. The amount of this payment is determined as follows:

(i) For a core session or core maintenance session furnished January 1, 2024 through December 31, 2024. \$25.

(ii) [Reserved]

(d) * * *

(1) For core session or core maintenance session, as applicable, furnished January 1, 2024 through December 31, 2024 the amount is \$25.

* * * * *

(e) *Updating performance payments, attendance payments, and the bridge payment.* The performance payments, attendance payments, and bridge payment will be adjusted each calendar year by the percent change in the Consumer Price Index for All Urban Consumers (CPI-U) (U.S. city average) for the 12-month period ending June 30th of the year preceding the update year. The percent change update will be calculated based on the level of precision of the index as published by the Bureau of Labor Statistics and applied based on one decimal place of precision. The annual MDPP services payment update will be published by CMS transmittal.

§ 414.94 [Removed]

41. Remove § 414.94.

42. Section 414.502 is amended by revising the definitions of “Data collection period” and “Data reporting period” to read as follows:

§ 414.502 Definitions.

* * * * *

Data collection period is the 6 months from January 1 through June 30, during which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2024 through March 31, 2024, the data collection period is January 1, 2019 through June 30, 2019.

Data reporting period is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019 through June 30, 2019, the data reporting period is January 1, 2024 through March 31, 2024.

* * * * *

§ 414.504 [Amended]

43. Amend § 414.504 in paragraph (a)(1) by removing the reference “January 1, 2023” and adding in its place the reference “January 1, 2024”.

44. Section 414.507 is amended by—

- a. Revising paragraph (d) introductory text and paragraph (d)(6); and
- b. Adding paragraph (d)(9).

The revisions and addition read as follows:

§ 414.507 Payment for clinical diagnostic laboratory tests.

* * * * *

(d) *Phase-in of payment reductions.* For years 2018 through 2026, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

* * * * *

(6) 2023 – 0.0 percent of the payment rate established in 2022.

* * * * *

(9) 2026 - 15 percent of the payment rate established in 2025.

* * * * *

§ 414.610 [Amended]

45. Amend § 414.610 in paragraphs (c)(1)(ii) introductory text and (c)(5)(ii) by removing the date “December 31, 2022” and adding in its place the date “December 31, 2024”

46. Section 414.902 is amended by adding the definitions of “Applicable five-year period”, “Low volume dose”, “New refund quarter”, “Qualifying biosimilar biological product”, and “Updated refund quarter” in alphabetical order to read as follows:

§ 414.902 Definitions.

* * * * *

Applicable five-year period means:

(1) For a qualifying biosimilar biological product for which payment has been made under section 1847A(b)(8) of the Act as of September 30, 2022, the 5-year period beginning on October 1, 2022; and

(2) For a qualifying biosimilar biological product for which payment is first made under section 1847A(b)(8) of the Act during a calendar quarter during the period beginning October 1, 2022 and ending December 31, 2027, the 5-year period beginning on the first day of such calendar quarter during which such payment is first made.

* * * * *

Low volume dose means, with respect to determination of whether an increased applicable percentage is warranted, an FDA-labeled dose of a drug for which the volume removed from the vial or container containing the labeled dose does not exceed 0.4 mL.

* * * * *

New refund quarter means a calendar quarter that is included in a report described in § 414.940(a) that is sent in the first year following the year in which the calendar quarter occurs.

* * * * *

Qualifying biosimilar biological product means a biosimilar biological product (as described in section 1847A(b)(1)(C) of the Act) with an average sales price (as described in section 1847A(b)(8)(A)(i) of the Act) less than the average sales price of the reference biological for a calendar quarter during the applicable 5-year period.

* * * * *

Updated refund quarter means a calendar quarter that is included in a report described in § 414.940(a) that is sent in the second year following the year in which the calendar quarter occurs.

* * * * *

47. Section 414.904 is amended by revising paragraphs (e)(4) and (j) to read as follows:

§ 414.904 Average sales price as the basis for payment.

* * * * *

(e) * * *

(4) *Payment amount in a case where the average sales price during the first quarter of sales is unavailable.* During an initial period (not to exceed a full calendar quarter) in which data on the prices for sales of the drug are not sufficiently available from the manufacturer to compute an average sales price:

(i) *In general.* Except as provided in paragraph (e)(4)(ii) of this section,

(A) For dates of service before January 1, 2019, the payment amount for the drug is based on the wholesale acquisition cost or the Medicare Part B drug payment methodology in effect on November 1, 2003.

(B) For dates of service on or after January 1, 2019, the payment amount for the drug is an amount not to exceed 103 percent of the wholesale acquisition cost or based on the Medicare Part B drug payment methodologies in effect on November 1, 2003.

(ii) *Limitation on payment amount for biosimilar biological products during initial*

period. For dates of service on or after July 1, 2024, the payment amount for a biosimilar biological product (as defined in § 414.902) during the initial period is the lesser of the following:

(A) The payment amount for the biosimilar biological product as determined under clause (e)(4)(i)(B) of this section or

(B) 106 percent of the amount determined under section 1847A(b)(1)(B) of the Act for the reference biological product (as defined in § 414.902).

* * * * *

(j) *Biosimilar biological products--(1) In general.* Except as provided in paragraph (j)(2), effective January 1, 2016, the payment amount for a biosimilar biological product (as defined in § 414.902), for all NDCs assigned to such product, is the sum of the average sales price of all NDCs assigned to the biosimilar biological products included within the same billing and payment code as determined under section 1847A(b)(6) of the Act, and 6 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902).

(2) *Temporary increase in Medicare Part B payment for qualifying biosimilar biological products.* In the case of a qualifying biosimilar biological product (as defined in § 414.902) that is furnished during the applicable five-year period (as defined in § 414.902) for such product, the payment amount for such product with respect to such period is the sum determined under as determined under section 1847A(b)(6) of the Act and 8 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902).

48. Section 414.940 is amended by—

- a. Redesignating paragraph (a)(1)(iii) as paragraph (a)(1)(iv).
- b. Adding new paragraph (a)(1)(iii).
- c. Revising paragraphs (a)(3), (b)(1) and (2), (c), and (d);

d. Redesignating paragraphs (e) and (f) as paragraphs (f) and (g), respectively; and

e. Adding new paragraph (e).

The revisions and additions read as follows:

§ 414.940 Refund for certain discarded single-dose container or single-use package drugs.

(a) * * *

(1) * * *

(iii) Reports will include information in paragraphs (a)(1)(i) and (ii) of this section for new refund quarters and updated refund quarters (as defined at § 414.902).

* * * * *

(3) *Report Timing.* Reports are sent once annually.

(b) * * *

(1) Refund amounts for which the manufacturer is liable, pursuant to this paragraph, must be paid by December 31 of the year in which the report described in paragraph (a) of this section is sent, except that refund amounts for which the manufacturer is liable, pursuant to this paragraph, for amounts in the initial report for calendar quarters in 2023 must be paid no later than February 28, 2025.

(2) In the case that a disputed report results in a refund amount due, refund amounts that the manufacturer is liable for pursuant to this paragraph shall be paid no later than the dates specified in paragraph (b)(1) of this section or 30 days following the resolution of the dispute, whichever is later.

* * * * *

(c) *Refund amount.* The amount of the refund specified in this paragraph is with respect to a refundable single-dose container or single-use package drug of a manufacturer assigned to a billing and payment code (except as provided in paragraph (c)(4) of this section) for:

(1) A new refund quarter (as defined at § 414.902) beginning on or after January 1, 2023,

an amount equal to the estimated amount (if any) by which:

(i) The product of the total number of units of the billing and payment code for such drug that were discarded during such new refund quarter; and the amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such new refund quarter;

(ii) Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such drug for the new refund quarter.

(2) The refund amount owed by a manufacturer for an updated refund quarter (as defined at § 414.902) beginning on or after January 1, 2023, an amount equal to the estimated amount (if any) by which:

(i) The product of the total number of units of the billing and payment code for such drug that were discarded during such updated refund quarter; and the amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter.

(ii) Exceeds the difference of:

(A) An amount equal to the applicable percentage of the estimated total allowed charges for such a drug during the updated refund quarter; and

(B) The refund amount already paid for such refundable drug for such quarter.

(3) Negative refund amount for an updated refund quarter. If the refund amount described in paragraph (c)(2) of this section is negative, the amount will be netted from refunds owed for other updated and new refund quarters included in the same report as such updated refund quarter.

(4) Exception when there are multiple manufacturers. If there is more than one manufacturer of a refundable single-dose container or single-use package drug for a quarter, the refund amount for which a manufacturer is liable is an amount equal to the estimated amount (if

any) by which –

(i) The product of the amount calculated in paragraph (c)(1) of this section and the percentage of billing unit sales (of the applicable billing and payment code attributed to the National Drug Code; exceeds:

(ii) The product of the amount in paragraph (c)(2) of this section and percentage of billing unit sales of the applicable billing and payment code attributed to the National Drug Code.

(iii) The number of billing unit sales for each NDC is the reported number of NDCs sold (as submitted in the ASP report to CMS each quarter) multiplied by the billing units per package for such NDC.

(d) *Applicable percentage.* For purposes of paragraph (c) of this section, and except as provided in paragraph (e) of this section, the applicable percentage is:

(1) 10 percent, unless specified otherwise in this section.

(2) 35 percent for a drug that is reconstituted with a hydrogel and has variable dosing based on patient-specific characteristics.

(3) 90 percent for a drug with a low volume dose (as defined at § 414.902 of this part) contained within 0.1 mL or less.

(4) 45 percent for a drug with a low volume dose (as defined in § 414.902 of this part) contained within 0.11 mL up to 0.4 mL.

(5) 26 percent for a drug designated an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act for a rare disease or condition (or diseases or conditions) and approved by the FDA only for one or more indications within such designated rare disease or condition (or diseases or conditions) and is furnished to fewer than 100 unique beneficiaries per calendar year.

(e) *Application process for increased applicable percentage.* Manufacturers may submit

an application to CMS requesting consideration of an increased applicable percentage for purposes of paragraph (c) of this section because of the drug’s unique circumstances. The process for submitting such an application is as follows:

(1) *Application*. An application must include:

(i) A written request that a drug be considered for an increased applicable percentage based on its unique circumstances;

(ii) FDA-approved labeling;

(iii) Justification for the consideration of an increased applicable percentage based on such unique circumstances; and

(iv) Justification for the requested applicable percentage.

(2) *Application timeline*. An application must be submitted in a form and manner specified by CMS by February 1 of the calendar year prior to the year the increased applicable percentage would apply.

(3) *Application processing*. Following a review of timely applications, CMS will summarize its analyses of applications and propose appropriate increases in rulemaking. If adopted, the increased applicable percentage will be the applicable percentage for purposes of paragraph (c) beginning as of the following January 1.

* * * * *

49. Section 414.1305 is amended by—

a. In the definition of “Attestation”, by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, subgroup, or group”.

b. In the definition of “Attribution-eligible beneficiary”, by revising paragraph (6);

c. In the definition of “Certified Electronic Health Record Technology (CEHRT)”, by revising paragraphs (2) introductory text and (2)(ii), and adding paragraph (3);

d. By revising the definition of “Collection type”;

e. By adding the definition of “Qualified posting”.

f. In the definition of “Submitter type”, by removing the term “MIPS eligible clinician, group, Virtual Group, APM Entity, or third party intermediary” and adding in its place the term the “MIPS eligible clinician, group, Virtual Group, subgroup, APM Entity, or third party intermediary.”

The revisions and addition read as follows:

§ 414.1305 Definitions.

* * * * *

Attribution-eligible beneficiary ***

* * * * *

(6) Has a minimum of one claim for covered professional services furnished by an eligible clinician who is on the Participation List for an Advanced APM Entity at any determination date during the QP Performance Period.

* * * * *

Certified Electronic Health Record Technology (CEHRT) ***

* * * * *

(2) For 2019 and subsequent years, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition, or subsequent Base EHR definition (as defined in 45 CFR 170.102), and has been certified to the ONC health IT certification criteria as adopted and updated in 45 CFR 170.315 –

* * * * *

(ii) Necessary to report on applicable objectives and measures specified for MIPS including the following:

* * * * *

(3) For purposes of determinations under §§ 414.1415 and 414.1420, beginning for CY 2024, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets—

(i) The 2015 Edition Base EHR definition, or subsequent Base EHR definition (as defined in 45 CFR 170.102); and

(ii) Any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice area, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM.

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey measure; administrative claims measures; and Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs).

* * * * *

Qualified Posting means the document made available that lists qualified registries or QCDRs available by CMS for use by MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities.

* * * * *

50. Section 414.1320 is amended by—

- a. Revising paragraph (h) introductory text; and
- b. Adding paragraph (i).

The addition and revision read as follow:

§ 414.1320 MIPS performance period.

* * * * *

(h) For purposes of the 2024 MIPS payment year and the 2025 MIPS payment year, the performance period for:

* * * * *

(i) For purposes of the 2026 MIPS payment year and each subsequent payment year, the performance period for:

(1) The Promoting Interoperability performance category is a minimum of a continuous 180-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(2) [Reserved]

51. Section 414.1325 is amended by revising paragraphs (a)(1), (c) introductory text, and (d) to read as follows.

§ 414.1325 Data submission requirements.

(a) * * *

(1) Except as provided in paragraph (a)(2) of this section, or under § 414.1370 or § 414.1365(c), as applicable, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with this section. Except for the Medicare Part B claims submission type, the data may also be submitted on behalf of the individual MIPS eligible clinician, group, virtual group, subgroup, or

APM Entity by a third party intermediary described at § 414.1400.

* * * * *

(c) *Data submission types for groups, virtual groups, subgroups, and APM Entities.*

Groups, virtual groups, subgroups, and APM Entities may submit their MIPS data using:

* * * * *

(d) *Use of multiple data submission types.* Beginning with the 2021 MIPS payment year as applicable to MIPS eligible clinicians, groups, and virtual groups, beginning with the 2023 MIPS payment year as applicable to APM Entities, and beginning with the 2025 MIPS payment year as applicable to subgroups, MIPS eligible clinicians, groups, virtual groups, APM Entities, and subgroups may submit their MIPS data using multiple data submission types for any performance category described in paragraph (a)(1) of this section, as applicable; provided, however, that the MIPS eligible clinician, group, virtual group, APM Entity, or subgroup uses the same identifier for all performance categories and all data submissions.

52. Section 414.1335 is amended by—

- a. Revising paragraphs (a) introductory text, (a)(1)(i), (a)(1)(ii), (a)(3) paragraph heading, and (a)(3)(i); and
- b. Adding paragraph (a)(4).

The revisions and additions read as follows:

§ 414.1335 Data submission criteria for the quality performance category.

(a) *Criteria.* A MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must submit data on MIPS quality measures in one of the following manners, as applicable:

(1) * * *

(i) Except as provided in paragraph (a)(1)(ii) of this section, submits data on at least six measures, including at least one outcome measure. If an applicable outcome measure is not available, reports one other high priority measure. If fewer than six measures apply to the MIPS

eligible clinician, group, virtual group, or APM Entity, reports on each measure that is applicable.

(A) For eCQMs, the submission of data requires the utilization of CEHRT, as defined at § 414.1305.

(B) [Reserved]

(ii) A MIPS eligible clinician, group, virtual group, and APM Entity that report on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures established by CMS through rulemaking, must submit data on at least six measures within that set, including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician, group, virtual group, or APM Entity, report on each measure that is applicable.

(A) For eCQMs, the submission of data requires the utilization of CEHRT, as defined at § 414.1305.

(B) [Reserved]

* * * * *

(3) *For the CAHPS for MIPS survey measure.* (i) For the 12-month performance period, a group, virtual group, subgroup, or APM Entity that participates in the CAHPS for MIPS survey must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measures data to CMS.

* * * * *

(4) *For Medicare CQMs.* (i) A MIPS eligible clinician, group, and APM Entity reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP.

(ii) [Reserved]

* * * * *

53. Section 414.1340 is amended by—

- a. Revising paragraph (a) introductory text;
- b. Adding paragraphs (a)(2)(i) and (a)(3)(i) and (ii);
- c. Revising paragraph (a)(4);
- d. Adding paragraph (a)(5);
- e. Revising paragraph (b) introductory text;
- f. Adding paragraphs (b)(2)(i) and (ii) and (b)(3)(i) and (ii);
- g. Revising paragraph (b)(4);
- h. Adding paragraph (b)(5);
- i. Revising paragraph (d); and
- j. Adding paragraph (e).

The revisions and additions read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on:

* * * * *

(2) At least 60 percent of the MIPS eligible clinician, group, and virtual group’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment years 2020 and 2021.

(3) At least 70 percent of the MIPS eligible clinician, group, and virtual group’s patients that meet the measure’s denominator criteria, regardless of payer for MIPS payment years 2022, 2023, 2024, and 2025.

(i) Applicable to an APM Entity for MIPS payment years 2023, 2024, and 2025.

(ii) Applicable to a subgroup for MIPS payment year 2025.

(4) At least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, and APM Entity's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2026, 2027, and 2028.

(5) At least 80 percent of the MIPS eligible clinician, group, virtual group, subgroup, or and APM Entity's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2029.

(b) MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities submitting quality measure data on Medicare Part B claims measures must submit data on:

* * * * *

(2) * * *

(i) Applicable to virtual groups starting with MIPS payment year 2020.

(ii) [Reserved]

(3) * * *

(i) Applicable to APM Entities starting with MIPS payment year 2023 and subgroups starting with MIPS payment year 2025.

(ii) [Reserved].

* * * * *

(4) At least 75 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2026, 2027, and 2028.

(5) At least 80 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2029.

* * * * *

(d) APM Entities, specifically Medicare Shared Savings Program Accountable Care

Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure’s denominator criteria for MIPS payment years 2026, 2027, and 2028.

(2) At least 80 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure’s denominator criteria for MIPS payment year 2029.

(e) If quality data are submitted selectively such that the submitted data are unrepresentative of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5).

54. Section 414.1350 is amended by revising paragraphs (c)(4) through (6) and adding paragraph (c)(7) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(c) * * *

(4) For the procedural episode-based measures specified beginning with and after the CY 2019 performance period/2021 MIPS payment year, the case minimum is 10, unless otherwise specified for individual measures. Beginning with the CY 2022 performance period/2024 MIPS payment year, the case minimum for Colon and Rectal Resection procedural episode-based measure is 20 episodes.

(5) For the acute inpatient medical condition episode-based measures specified beginning with and after CY 2019 performance period/2021 MIPS payment year, the case minimum is 20, unless otherwise specified for individual measures.

(6) For the chronic condition episode-based measures specified beginning with and after the CY 2022 performance period/2024 MIPS payment year, the case minimum is 20, unless otherwise specified for individual measures.

(7) For the care setting episode-based measures specified beginning with and after the CY 2024 performance period/2026 MIPS payment year, the case minimum is 20, unless otherwise specified for individual measures.

* * * * *

55. Section 414.1360 is amended by revising paragraph (a) introductory text to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.

(a) For purposes of the transition year of MIPS and future years, MIPS eligible clinicians, subgroups, or groups must submit data on MIPS improvement activities in one of the following manners:

* * * * *

56. Section 414.1365 is amended by--

- a. Revising paragraphs (e)(2)(ii) introductory text and (e)(3); and
- b. Adding paragraphs (e)(4)(i) and (ii).

The revisions and addition read as follow:

§ 414.1365 MIPS Value Pathways.

* * * * *

- (e) * * *
- (2) * * *

(ii) *Subgroups*. For an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, for the CY 2023 performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the

subgroup may receive reweighting in the following circumstances independent of the affiliated group:

* * * * *

(3) *Facility-based scoring.* If an MVP Participant, that is not an APM Entity or a subgroup, is eligible for facility-based scoring, a facility-based score also will be calculated in accordance with § 414.1380(e).

(4) * * *

(i) For subgroups, the affiliated group’s complex patient bonus will be added to the final score.

(ii) [Reserved]

57. Section 414.1375 is amended by revising paragraph (b)(2)(ii)(C), and adding paragraph (b)(2)(ii)(D) to read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

* * * * *

(A) * * *

(B) * * *

(C) Beginning with the 2024 MIPS payment year through the 2025 MIPS payment year, submit an attestation, with either an affirmative or negative response, with respect to whether the MIPS eligible clinician completed the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.

(D) Beginning with the 2026 MIPS payment year, submit an affirmative attestation regarding the MIPS eligible clinician’s completion of the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.

* * * * *

58. Section 414.1380 is amended by—

- a. Revising paragraphs (a)(1)(i) and (ii), (b)(1)(v)(A), (b)(2)(iv)(A), (B), (C) and (E), (b)(3)(i), and (c)(2)(i)(A)(4)(iii);
- b. Adding paragraphs (c)(2)(iv);
- c. In paragraph (c)(3)(v) removing the term “MIPS eligible clinicians, groups, subgroups, APM Entities and virtual groups” and adding in its place the term “MIPS eligible clinicians, groups, APM Entities and virtual groups;” and
- d. In paragraph (c)(3)(vi) removing the term “MIPS eligible clinicians, groups, and subgroups” and adding in its place the term “MIPS eligible clinicians and groups”.

The revisions and additions read as follow:

§ 414.1380 Scoring.

(a) * * *

(1) * * *

(i) For the quality performance category, measures are scored between zero and 10 measure achievement points. Performance is measured against benchmarks. Prior to the CY 2023 performance period/2025 MIPS payment year, measure bonus points are available for submitting high-priority measures and submitting measures using end-to-end electronic reporting. Measure bonus points are available for small practices that submit data on at least 1 quality measure. Beginning with the 2020 MIPS payment year, improvement scoring is available in the quality performance category.

(ii) For the cost performance category, measures are scored between 1 and 10 points. Performance is measured against a benchmark. Beginning with the 2025 MIPS payment year, improvement scoring is available in the cost performance category.

* * * * *

(b) * * *

(1) * * *

(v) * * *

(A) *High priority measures.* Subject to paragraph (b)(1)(v)(A)(I) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning in the 2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive these measure bonus points.

* * * * *

(2) * * *

(iv) * * *

(A) The cost improvement score is determined at the category level for the cost performance category.

(B) The cost improvement score is calculated only when data sufficient to measure improvement are available. Sufficient data are available when a MIPS eligible clinician or group participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the cost performance category for 2 consecutive performance periods. If the cost improvement score cannot be calculated because sufficient data are not available, then the cost improvement score is zero.

(C) The cost improvement score is determined at the category-level by subtracting the cost performance category score from the previous performance period from the cost performance category percent score from the current performance period, and then by dividing the difference by the cost performance category score from the previous performance period, and by dividing by 100.

* * * * *

(E) The maximum cost improvement score for the 2020, 2021, 2022, 2023, and 2024 MIPS payment year is zero percentage points. The maximum cost improvement score beginning with the 2025 MIPS payment year is 1 percentage point.

* * * * *

(3) * * *

(i) For MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent. MIPS eligible clinicians participating in APMs must attest to having completed an improvement activity or submit data for the quality and Promoting Interoperability performance categories in order to receive such credit.

* * * * *

(c) * * *

(2) * * *

(i) * * *

(A) * * *

(4) * * *

(iii) For the 2024 through 2026 MIPS payment years, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be distributed.

* * * * *

(iv) If CMS has granted an application for a hardship exception or any other type of exception to a MIPS eligible clinician under paragraph (c)(2)(i)(A)(6) or (c)(2)(i)(C)(2) of this section, or has identified a MIPS eligible clinician in a CMS-designated region as being affected by an automatic extreme and uncontrollable circumstances event under paragraph (c)(2)(i)(A)(8)

or (c)(2)(i)(C)(3) of this section, CMS will not apply the improvement activities score described in paragraph (b)(3)(i) of this section to the MIPS eligible clinician’s score.

* * * * *

59. Section 414.1385 is amended—

a. In paragraph (a) by removing the term “MIPS eligible clinician or group” and adding in its in place the term “MIPS eligible clinician, virtual group, subgroup or group;”

b. In paragraph (a)(1) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, or group;”

c. By revising paragraph (a)(2);

d. In paragraph (a)(3) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, group;”

e. By revising paragraph (a)(5); and

f. In paragraph (a)(6) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, or group”.

The revisions read as follows:

§ 414.1385 Targeted review and review limitations.

(a) * * *

(2) All requests for targeted review must be submitted during the targeted review request submission period, which begins on the day CMS makes available the MIPS final score, and ends 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year. The targeted review request submission period may be extended as specified by CMS.

* * * * *

(5) A request for a targeted review may include additional information in support of the request at the time it is submitted. If CMS requests additional information from the MIPS eligible clinician, subgroup, virtual group, or group that is the subject of a request for a targeted

review, the information must be provided and received by CMS within 15 days of CMS' request. Non-responsiveness to CMS' request for additional information may result in a final decision based on the information available, although another non-duplicative request for targeted review may be submitted before the end of the targeted review request submission period.

* * * * *

60. Section 414.1400 is amended by—

- a. Revising paragraphs (a)(1)(iii), (a)(2)(i), (a)(2)(ii)(A), (a)(3), and (b)(1)(ii);
- b. Adding paragraphs (b)(1)(iii);
- c. Revising paragraphs (b)(2), (b)(3)(v)(E)(I) and (2);
- d. Adding paragraphs (b)(3)(ix) through (xvii);
- e. Revising paragraph (b)(4)(i)(B);
- f. Adding paragraphs (b)(4)(i)(C) and (b)(4)(iv)(O) and (P);
- g. Revising paragraph (e)(1) introductory text;
- h. Adding paragraph (e)(1)(i)(F);
- i. Revising paragraph (e)(1)(ii);
- j. Adding paragraphs (e)(2)(iv) and (v);
- k. Revising paragraphs (e)(3) and (4) and (f).

The additions and revisions read as follows:

§ 414.1400 Third party intermediaries.

(a)* * *

(1)* * *

(iii) Before the CY 2025 performance period/2027 payment year, Health IT vendor;

* * * * *

(2) * * *

(i) To be approved as a third party intermediary, an organization must meet the following requirements:

(A) The organization's principal place of business and the location in which it stores data must be in the U.S.

(B) The organization must have the ability to indicate the source of any data it will submit to CMS if the data will be derived from CEHRT, a QCDR, qualified registry, or health IT vendor.

(C) The organization must certify that it intends to provide services throughout the entire performance period and applicable data submission period.

(ii) * * *

(A) Whether the organization failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary, including past compliance; and

* * * * *

(3) For third-party intermediary program requirements:

(i) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS.

(ii) All data submitted to CMS by a third party intermediary must be submitted in the form and manner specified by CMS.

(A) The submission of data on measures by a third party intermediary to CMS must include data on all of the MIPS eligible clinician's patients, regardless of payer, unless otherwise specified by the collection type.

(B) [Reserved]

(iii) If the clinician chooses to opt-in to participate in MIPS in accordance with § 414.130, the third party intermediary must be able to transmit that decision to CMS.

(iv) Prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, a third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan by a date specified by CMS. The transition plan must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the withdrawal mid-performance period or discontinuation of services mid-performance period.

(B) Impacted entities:

(1) The number of clinicians, groups, virtual groups, subgroups or APM entities (inclusive of MIPS eligible, opt-in and voluntary participants) that would need to find another way to report.

(2) As applicable, identify any QCDRs that were granted licenses to QCDR measures which would no longer be available for reporting due to the transition.

(C) The steps the third party intermediary will take to ensure that the clinicians, groups, virtual groups, subgroups, or APM Entities identified in paragraph (a)(3)(iv)(B)(1) of this section are notified of the transition in a timely manner, and successfully transitioned to an alternate third party intermediary, submitter type, or, for any measure or activity on which data has been collected, collection type, as applicable.

(D) A detailed timeline that outlines timing for communications, the start of the transition, and completion of the transition of these clinicians, groups, virtual groups, subgroups, or APM Entities.

(E) The third party intermediary must communicate to CMS that the transition was completed by the date included in the detailed timeline.

(v) As a condition of its qualification and approval to participate in MIPS as a third party intermediary, a third party intermediary must:

(A) Make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email.

(B) Retain all data submitted to CMS for purposes of MIPS for 6 years from the end of the MIPS performance period.

(C) Upon request, provide CMS with any records or data retained in connection with its operation as a third party intermediary for up to 6 years from the end of the MIPS performance period.

(vi) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

(b) * * *

(1)* * *

(ii) Beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. A QCDR or qualified registry must support all measures and activities included in the MVP with the following exceptions:

(A) If an MVP is intended for reporting by multiple specialties, a QCDR or a qualified registry are required to report those measures pertinent to the specialty of its MIPS eligible clinicians.

(B) If an MVP includes a QCDR measure, it is not required to be reported by a QCDR other than the measure owner.

(iii) Beginning with the CY 2023 performance period/2025 MIPS payment year, A QCDR or qualified registry must support subgroup reporting.

(2) *Self-nomination.* For the CY 2019 performance period/2021 MIPS payment year and future years, an existing QCDR or qualified registry that is in good standing may use the Simplified Self-Nomination process form during the self-nomination period, from July 1 and September 1 of the CY preceding the applicable performance period.

(3) * * *

(v) * * *

(E) * * *

(1) Uses a sample size of at least 3 percent of a combination of the individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups and APM entities, no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities.

(2) Uses a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

* * * * *

(ix) During the self-nomination period, a QCDR or a qualified registry must submit to CMS quality measure numbers, Promoting Interoperability identifiers, improvement activity identifiers and MVP titles.

(x) A QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one outcome measure.

(A) If no outcome measure is available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure.

(B) [Reserved]

(xi) A QCDR or a qualified registry must submit to CMS risk-adjusted measure results when submitting data for measures that include risk adjustment in the measure specification.

(xii) A QCDRs or qualified registry must enter into appropriate Business Associate Agreements with MIPS eligible clinicians to collect and process their data.

(xiii) A QCDR or a qualified registry must maintain records of their authorization to submit data to CMS for the purpose of MIPS participation for each NPI whom the QCDR or qualified registry will submit data to CMS for. The records must:

(A) Be annually obtained by the QCDR or qualified registry at the time the clinician or group enters into an agreement with the QCDR or qualified registry for the submission of MIPS data to the QCDR or qualified registry.

(B) Be signed by an eligible clinician, if reporting individually, or by an authorized representative of the reporting group, subgroup, Virtual Group, or APM Entity.

(C) Records of the authorization must be maintained for 6 years after the performance period ends.

(xiv) A QCDR or a qualified registry must attest that the information listed on the qualified posting is accurate.

(xv) A QCDR or a qualified registry must provide to CMS, upon request, the data submitted by the QCDR or qualified registry *for purposes of MIPS*.

(xvi) A QCDR or qualified registry must attest to the following:

(A) A QCDR or a qualified registry must attest that it has required each MIPS eligible clinician on whose behalf it reports to provide the QCDR or qualified registry with all documentation necessary to verify the accuracy of the data on quality measures that the eligible clinician submitted to the QCDR or qualified registry.

(B) A QCDR or qualified registry must also attest that it has required each MIPS eligible clinician to permit the QCDR or qualified registry to provide the information described in paragraph (b)(3)(xviii)(A) of this section to CMS upon request.

(xvii) A QCDR or a qualified registry must accept and maintain clinician data by January 1 of the applicable performance period.

(4)* * *

(i)* * *

(B) For a QCDR measure, the entity must submit for CMS approval measure specifications including: Name/title of measure, descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the entity must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted. The approved QCDR measure specifications must remain published through the performance period and data submission period.

(C) For a QCDR measure, the QCDR must provide, if available, data from years prior before the start of the performance period.

* * * * *

(iv) * * *

(O) QCDR measures submitted after self-nomination.

(P) More than 30 QCDR measures are submitted by a single QCDR.

* * * * *

(e)* * *

(1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, failed to comply with the program requirements of this section, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i)* * *

(F) Once the issue has been resolved, the detailed final resolution and an update , if any, to the monitoring plan provided pursuant to § 414.1400(e)(1)(i)(C).

(ii) Publicly disclose as follows:

(A) For the purposes of the CY 2025 performance period/2027 MIPS payment year and prior reporting periods and payment years, publicly disclose the entity's data error rate on the CMS website until the data error rate falls below 3 percent.

(B) Beginning with the CY 2025 performance period/2027 MIPS payment year, publicly disclose on the CMS website that CMS took remedial action against or terminated the third party intermediary.

(2)* * *

(iv) The third party intermediary has not maintained current contact information for correspondence.

(v) The third party intermediary is on remedial action for two consecutive years.

(3) A data submission that contains data inaccuracies affecting the third party intermediary's clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

(4) For purposes of this paragraph (e), CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, if the submitted data includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies.

* * * * *

(f) *Auditing of entities submitting MIPS data.* Third party intermediaries may be randomly selected for compliance evaluation or may be selected at the suggestion of CMS if there is an area of concern regarding the third party intermediary. For example, areas of concern could include, but are not limited to: high data errors, support call absences, delinquent deliverables, remedial action status, clinician concerns regarding the third party intermediary, a continuing pattern of Quality Payment Program Service Center inquiries or support call questions, and/or CMS concerns regarding the third party intermediary.

61. Section 414.1405 is amended by—

a. Adding paragraphs (b)(9)(iii); and

b. Revising paragraph (g).

The addition and revision read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(9) * * *

(iii) The performance threshold for 2026 MIPS payment year is 82 points. The prior

period to determine the performance threshold is the 2019 through 2021 MIPS payment years.

* * * * *

(g) *Performance threshold methodology.* (1) For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section.

(2) For purposes of establishing a performance threshold as identified in § 414.1405(b), beginning with the 2026 MIPS payment year, a prior period is a time span of three performance periods.

62. Section 414.1415 is amended by revising paragraph (a) to read as follows:

§ 414.1415 Advanced APM criteria.

(a) *Use of certified electronic health record technology (CEHRT)*—(1) *Required use of CEHRT.* To be an Advanced APM, an APM must:

(i) For QP Performance Periods ending with 2018, require at least 50 percent, or for QP Performance Periods beginning with 2019 and ending with 2023, 75 percent, of eligible clinicians in each participating APM Entity group, or for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or health care providers;

(ii) For QP Performance Periods prior to 2019, for the Shared Savings Program, apply a penalty or reward to an APM Entity based on the degree of the use of CEHRT of the eligible clinicians in the APM Entity; and

(iii) For QP Performance Periods beginning with 2024, require use of CEHRT as defined at paragraph (3) under CEHRT at § 414.1305.

(2) [Reserved].

* * * * *

63. Section 414.1420 is amended by revising paragraph (b) to read as follows:

§ 414.1420 Other payer advanced APM criteria.

* * * * *

(b) *Use of CEHRT.* To be an Other Payer Advanced APM:

(1) CEHRT must be used, for QP Performance Periods ending with 2019, by at least 50 percent; and for QP Performance Periods for 2020 through 2023, by at least 75 percent, of participants in each participating APM Entity group, or each hospital if hospitals are the APM Entities, in the other payer arrangement to document and communicate clinical care; and

(2) For QP Performance Periods beginning on or after January 1, 2024, use of CEHRT (as defined in § 414.1305, paragraph (3) in the definition of “Certified Electronic Health Record Technology (CEHRT)”), must be a requirement of participation in the APM.

* * * * *

64. Section 414.1425 is amended by adding paragraph (b)(3) to read as follows:

§ 414.1425 Qualifying APM participant determination: In general.

* * * * *

(b) * * *

(3) *Individual QP determinations.* For QP Performance Periods beginning for calendar year 2024, except as provided in paragraph (b)(2) of this section and in § 414.1440, QP determinations are made individually at the eligible clinician level. To be assessed as a QP, an eligible clinician’s APM participant identifier must be included on the Participation List of an APM Entity participating in an Advanced APM on one of the following dates during the QP Performance Period: March 31, June 30, or August 31. An eligible clinician included on such a Participation List on any one of these dates is assessed as a QP even if the eligible clinician is not included on the Participation List at one of the prior or later listed dates. CMS performs QP determinations for the identified eligible clinicians during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP

determination dates for which the eligible clinician is included on the Participation List: March 31, June 30, and August 31.

* * * * *

65. Section 414.1430 is amended by—

- a. Revising paragraph (a)(1)(iv);
- b. Adding paragraph (a)(1)(v);
- c. Revising paragraph (a)(2)(iv);
- d. Adding paragraph (a)(2)(v);
- e. Revising paragraph (a)(3)(iv);
- f. Adding paragraph (a)(3)(v);
- g. Revising paragraph (a)(4)(iv);
- h. Adding paragraph (a)(4)(v); and
- i. Revising paragraph (b)(1)(i)(A) and (B), (b)(2)(i)(A) and (B), (b)(3)(i)(A) and (B), (b)(4)(i)(A) and (B).

The revisions and additions read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) * * *

(iv) 2025: 50 percent.

(v) 2026 and later: 75 percent.

(2) * * *

(iv) 2025: 40 percent.

(v) 2026 and later: 50 percent.

(3) * * *

(iv) 2025: 35 percent.

(v) 2026 and later: 50 percent.

(4) * * *

(iv) 2025: 25 percent.

(v) 2026 and later: 35 percent.

(b) * * *

(1) * * *

(i) * * *

(A) 2021 through 2025: 50 percent.

(B) 2026 and later: 75 percent.

* * * * *

(2) * * *

(i) * * *

(A) 2021 through 2025: 40 percent.

(B) 2026 and later: 50 percent.

* * * * *

(3) * * *

(i) * * *

(A) 2021 through 2025: 35 percent.

(B) 2026 and later: 50 percent.

* * * * *

(4) * * *

(i) * * *

(A) 2021 through 2025: 25 percent.

(B) 2026 and later: 35 percent.

* * * * *

66. Section 414.1450 is amended by—

- a. Adding paragraphs (a)(1)(i) and (ii); and
- b. Revising paragraph (b)(1).

The addition and revision read as follows:

§ 414.1450 APM incentive payment.

(a) * * *

(i) For payment years 2019 through 2025, CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section in the manner described in paragraphs (d) and (e) of this section.

(ii) [Reserved]

* * * * *

(b) * * *

(1) For payment years 2019 through 2024, the amount of the APM Incentive Payment is equal to 5 percent or, with respect to payment year 2025, 3.5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment.

* * * * *

**PART 415--SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS,
SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN
CERTAIN SETTINGS**

67. The authority for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

§ 415.140 [Amended]

68. In § 415.140 in paragraph (a) amend the definition of “Substantive portion” by removing the reference “year 2022 and 2023” and adding in its place the reference “years 2022 through 2024”.

PART 418—HOSPICE CARE

69. The authority citation for part 418 continues to read as follow:

Authority: 42 U.S.C. 1302 and 1395hh.

70. Section 418.56 is amended by revising paragraph (a)(1)(iii) to read as follows:

§ 418.56 Condition of participation: Interdisciplinary group, care planning, and coordination of services.

* * * * *

(a) * * *

(1) * * *

(iii) A social worker, marriage and family therapist, or a mental health counselor, depending on the preferences and needs of the patient.

* * * * *

71. Section 418.114 is amended by adding paragraphs (c)(3) and (4) to read as follows:

§ 418.114 Condition of participation: Personnel qualifications.

* * * * *

(c) * * *

(3) Marriage and family counselor as defined at § 410.53.

(4) Mental health counselor as defined at § 410.54.

* * * * *

PART 422-MEDICARE ADVANTAGE PROGRAM

72. The authority citation for part 422 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w–22 through 1395w–28, and 1395hh.

73. Section 422.310 is amended by adding paragraph (f)(3)(iv) to read as follows:

§422.310 Risk adjustment data.

* * * * *

(f) * * *

(3) * * *

(iv) CMS determines that releasing aggregated data before reconciliation is necessary and appropriate to support activities or authorized uses under paragraph (f)(1)(vii) of this section.

* * * * *

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

74. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w-101 through 1395w-152, and 1395hh.

75. Section 423.160 is amended by--

- a. Revising paragraph (a)(5) introductory text;
- b. Removing paragraph (a)(5)(i);
- c. Redesignating paragraphs (a)(5)(ii) through (iv) as paragraphs (a)(5)(i) through (iii), respectively and revising newly redesignated paragraph (a)(5)(ii).

The revisions read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iii) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section, subject to the exemption in paragraph (a)(3)(iii) of this section. Prescriptions written for a beneficiary in a long-term care facility will not be included in determining compliance until January 1, 2025.

Compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care facility will commence on or after January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on other prescriptions will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

* * * * *

(ii) Prescriber has an address in PECOS in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. If a prescriber does not have an address in PECOS, prescriber has an address in NPPES in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. Starting in the 2024 measurement year, CMS will identify which emergencies or disasters qualify for this exception.

* * * * *

PART 424-CONDITIONS FOR MEDICARE PAYMENT

76. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

77. Section 424.205 is amended by—

a. In paragraph (a), by removing the definition of “MDPP interim preliminary recognition”;

b. Revising paragraph (b)(1);

c. Removing paragraph (c);

d. Redesignating paragraphs (d) through (i) as paragraphs (c) through (h), respectively;

and

e. Revising newly designated paragraph (c)(1);

f. Removing newly redesignated paragraph (c)(10)(iii);

g. Revising newly redesignated paragraph (c)(14);

- h. Revising newly redesignated paragraphs (f)(2)(i);
- i. Removing newly redesignated paragraph (f)(5)(iii);
- j. Redesignating newly redesignated paragraphs (f)(5)(iv) and (v) as paragraphs (f)(5)(iii)

and (iv), respectively;

- k. Revising newly redesignated paragraph (f)(5)(iii) and paragraph (g)(1)(i)(C).

The revisions read as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(b) * * *

(1) Has either preliminary, full, full plus CDC DPRP recognition.

* * * * *

(c) * * *

(1) The MDPP supplier must have and maintain preliminary, full, or full plus CDC DPRP recognition.

* * * * *

(14) The MDPP supplier must submit performance data for MDPP beneficiaries who ever attended ongoing maintenance sessions with data elements consistent with the CDC's DPRP standards for data elements required for the core services period.

* * * * *

(f) * * *

(2) * * *

(i) Documentation of the type of session, whether a core session, a core maintenance session, an in-person make-up session, or a virtual make-up session.

* * * * *

(5) * * *

(iii) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(7) of this chapter.

* * * * *

(g) * * *

(1) * * *

(i) * * *

(C) An MDPP supplier that does not satisfy the requirements in paragraph (b)(1) of this section may become eligible to bill for MDPP services again if it successfully achieves preliminary, full, or full plus CDC DPRP recognition, and successfully enrolls again in Medicare as an MDPP supplier after any applicable reenrollment bar has expired.

* * * * *

78. Section 424.210 is amended by revising paragraphs (b)(2) and (d)(1) to read as follows:

§ 424.210 Beneficiary engagement incentives under the Medicare Diabetes Prevention Program expanded model.

* * * * *

(b) * * *

(2) The item or service must be reasonably connected to the CDC-approved National Diabetes Prevention Program curriculum furnished to the MDPP beneficiary during a core session or core maintenance session furnished by the MDPP supplier.

* * * * *

(d) * * *

(1) Attendance at core sessions or core maintenance sessions.

* * * * *

79. Section 424.502 is amended by—

- a. Revising the definition of “Authorized official”; and
- b. Adding the definitions of "Indirect ownership interest,” “Pattern or practice,” and “Supplier” in alphabetical order.

The revision and additions read as follows:

§ 424.502 Definitions.

* * * * *

Authorized official means an appointed official (for example, chief executive officer, chief financial officer, general partner, chairman of the board, or direct owner) to whom the organization has granted the legal authority to enroll it in the Medicare program, to make changes or updates to the organization's status in the Medicare program, and to commit the organization to fully abide by the statutes, regulations, and program instructions of the Medicare program. For purposes of this definition only, the term “organization” means the enrolling entity as identified by its legal business name and tax identification number.

* * * * *

Indirect ownership interest means as follows:

(1)(i) Any ownership interest in an entity that has an ownership interest in the enrolling or enrolled provider or supplier.

(ii) Any ownership interest in an indirect owner of the enrolling or enrolled provider or supplier.

(2) The amount of indirect ownership interest is determined by multiplying the percentages of ownership in each entity. For example, if A owns 10 percent of the stock in a corporation that owns 80 percent of the provider or supplier, A's interest equates to an 8 percent indirect ownership interest in the provider or supplier and must be reported on the enrollment

application. Conversely, if B owns 80 percent of the stock of a corporation that owns 5 percent of the stock of the provider or supplier, B's interest equates to a 4 percent indirect ownership interest in the provider or supplier and need not be reported.

* * * * *

Pattern or practice means:

(1) For purposes of § 424.535(a)(8)(ii), at least three submitted non-compliant claims.

(2) For purposes of § 424.535(a)(14), at least three prescriptions of Part B or Part D drugs that are abusive, represent a threat to the health and safety of Medicare beneficiaries, or otherwise fail to meet Medicare requirements.

(3) For purposes of § 424.535(a)(21), at least three orders, certifications, referrals, or prescriptions of Medicare Part A or B services, items, or drugs that are abusive, represent a threat to the health and safety of Medicare beneficiaries, or otherwise fail to meet Medicare requirements.

* * * * *

Supplier means, for purposes of this subpart, all of the following:

(1) The individuals and entities that qualify as suppliers under § 400.202.

(2) Physical therapists in private practice.

(3) Occupational therapists in private practice.

(4) Speech-language pathologists.

* * * * *

80. Section 424.516 is amended by revising paragraphs (d)(1)(iii) and (e)(1) to read as follows:

§ 424.516 Additional provider and supplier requirements for enrolling and maintaining active enrollment status in the Medicare program.

* * * * *

(d) * * *

(1) * * *

(iii) A change, addition, or deletion of a practice location.

* * * * *

(e) * * *

(1) Within 30 days for a change of ownership or control (including changes in authorized official(s) or delegated official(s)) or a change, addition, or deletion of a practice location;

* * * * *

81. Section 424.530 is amended by—

- a. Revising paragraph (a)(1); and
- b. Adding paragraphs (a)(16), (17), and (18).

The revision and additions read as follows:

§ 424.530 Denial of enrollment in the Medicare program.

(a) * * *

(1) *Noncompliance.* The provider or supplier is determined to not be in compliance with the enrollment requirements described in this title 42, or in the enrollment application applicable for its provider or supplier type, and has not submitted a plan of corrective action as outlined in part 488 of this chapter.

* * * * *

(16) *Certain misdemeanors.* (i) The provider or supplier, or any owner, managing employee or organization, officer, or director of the provider or supplier, has been convicted (as that term is defined in 42 CFR 1001.2) of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries.

(ii) Offenses under paragraph (a)(16)(i) of this section include, but are not limited in scope or severity to, the following:

(A) Fraud or other criminal misconduct involving the provider's or supplier's participation in a Federal or State health care program or the delivery of services or items thereunder.

(B) Assault, battery, neglect, or abuse of a patient (including sexual offenses).

(C) Any other misdemeanor that places the Medicare program or its beneficiaries at immediate risk, such as a malpractice suit that results in a conviction of criminal neglect or misconduct.

(17) *False Claims Act (FCA)*. (i) The provider or supplier, or any owner, managing employee or organization, officer, or director of the provider or supplier, has had a civil judgment under the FCA (31 U.S.C. 3729 through 3733) imposed against them within the previous 10 years.

(ii) In determining whether a denial under this paragraph is appropriate, CMS considers the following factors:

(A) The number of provider or supplier actions that the judgment incorporates (for example, the number of false claims submitted).

(B) The types of provider or supplier actions involved.

(C) The monetary amount of the judgment.

(D) When the judgment occurred.

(E) Whether the provider or supplier has any history of final adverse actions (as that term is defined in § 424.502 of this chapter).

(F) Any other information that CMS deems relevant to its determination.

(18) *Supplier standard or condition violation*. (i) The independent diagnostic testing facility is non-compliant with any provision in § 410.33(g).

(ii) The DMEPOS supplier is non-compliant with any provision in § 424.57(c).

(iii) The opioid treatment program is non-compliant with any provision in § 424.67(b).

(iv) The home infusion therapy supplier is non-compliant with any provision in § 424.68(c).

(v) The Medicare diabetes prevention program is non-compliant with any provision in § 424.205(b) or (d).

* * * * *

82. Section 424.535 is amended by—

a. Revising paragraphs (a)(1) introductory text, (a)(8)(ii) introductory text, and (a)(14)(i) introductory text and (ii) introductory text;

b. Adding paragraphs (a)(15) and (16);

c. Revising paragraph (a)(17) introductory text;

d. Redesignating paragraphs (a)(17)(i) through (vi) as paragraphs (a)(17)(i)(A) through (F);

e. Adding paragraph (a)(17)(ii);

f. Revising paragraph (a)(21) introductory text;

g. Adding paragraph (a)(23); and

h. Revising paragraphs (e) and (g).

The additions and revisions read as follows:

§ 424.535 Revocation of enrollment in the Medicare program.

(a) * * *

(1) *Noncompliance.* The provider or supplier is determined to not be in compliance with the enrollment requirements described in this title 42, or in the enrollment application applicable for its provider or supplier type, and has not submitted a plan of corrective action as outlined in

part 488 of this chapter. The provider or supplier may also be determined not to be in compliance if it has failed to pay any user fees as assessed under part 488 of this chapter.

* * * * *

(8) * * *

(ii) CMS determines that the provider or supplier has a pattern or practice of submitting claims that fails to meet Medicare requirements and that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers, as appropriate or applicable, the following:

* * * * *

(14) * * *

(i) The pattern or practice is abusive or represents a threat to the health and safety of Medicare beneficiaries, or both, and CMS determines that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers the following factors:

* * * * *

(ii) The pattern or practice of prescribing fails to meet Medicare requirements and CMS determines that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers the following factors:

* * * * *

(15) *False Claims Act (FCA)*. (i) The provider or supplier, or any owner, managing employee or organization, officer, or director of the provider or supplier, has had a civil judgment under the FCA (31 U.S.C. 3729 through 3733) imposed against them within the previous 10 years.

(ii) In determining whether a revocation under this paragraph is appropriate, CMS considers the following factors:

(A) The number of provider or supplier actions that the judgment incorporates (for example, the number of false claims submitted).

(B) The types of provider or supplier actions involved.

(C) The monetary amount of the judgment.

(D) When the judgment occurred.

(E) Whether the provider or supplier has any history of final adverse actions (as that term is defined in § 424.502).

(F) Any other information that CMS deems relevant to its determination.

(16) *Certain misdemeanors.* (i) The provider or supplier, or any owner, managing employee or organization, officer, or director of the provider or supplier, has been convicted (as that term is defined in 42 CFR 1001.2) of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries.

(ii) Offenses under paragraph (i) include, but are not limited in scope or severity to, the following:

(A) Fraud or other criminal misconduct involving the provider's or supplier's participation in a Federal or State health care program or the delivery of services or items thereunder.

(B) Assault, battery, neglect, or abuse of a patient (including sexual offenses).

(C) Any other misdemeanor that places the Medicare program or its beneficiaries at immediate risk, such as a malpractice suit that results in a conviction of criminal neglect or misconduct.

(17) *Debt referred to the United States Department of Treasury.* (i) The provider or supplier failed to repay a debt that CMS appropriately referred to the United States Department

of Treasury. In determining whether a revocation under this paragraph (a)(17) is appropriate, CMS considers the following factors:

* * * * *

(ii) Paragraph (17)(i) of this paragraph does not apply to the following situations:

(A) The provider's or supplier's Medicare debt has been discharged by a bankruptcy court; or

(B) The administrative appeals process concerning the debt has not been exhausted or the timeframe for filing such an appeal (at the appropriate level of appeal) has not expired.

* * * * *

(21) *Abusive ordering, certifying, referring, or prescribing of Part A or B services, items or drugs.* The physician or eligible professional has a pattern or practice of ordering, certifying, referring, or prescribing Medicare Part A or B services, items, or drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or otherwise fails to meet Medicare requirements, and CMS determines that a revocation on this basis is warranted. In determining whether a revocation is warranted, CMS considers the following factors:

* * * * *

(23) *Supplier standard or condition violation.* (i) The independent diagnostic testing facility is non-compliant with any provision in 42 CFR 410.33(g).

(ii) The DMEPOS supplier is non-compliant with any provision in § 424.57(c).

(iii) The opioid treatment program is non-compliant with any provision in § 424.67(b) or (e).

(iv) The home infusion therapy supplier is non-compliant with any provision in § 424.68(c) or (e).

(v) The Medicare diabetes prevention program is non-compliant with any provision in § 424.205(b) or (d).

* * * * *

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that party within 15 days of the revocation notification.

* * * * *

(g) *Effective date of revocation.* (1) Except as described in paragraphs (g)(2) and (g)(3) of this section, a revocation becomes effective 30 days after CMS or the CMS contractor mails notice of its determination to the provider or supplier.

(2) Except as described in paragraph (g)(3) of this section, the revocation effective dates in the situations identified in this paragraph (g)(2) are as follows:

(i) For revocations based on a Federal exclusion or debarment, the date of the exclusion or debarment.

(ii) For revocations based on a felony conviction, the date of the felony conviction.

(iii) For revocations based on a State license suspension or revocation, the date of the license suspension or revocation.

(iv) For revocations based on a CMS determination that the provider's or supplier's practice location is non-operational, the date on which the provider's or supplier's practice location was no longer operational (per CMS' or the CMS contractor's determination).

(v) For revocations based on a misdemeanor conviction, the date of the misdemeanor conviction.

(vi) For revocations based on a State license surrender in lieu of further disciplinary action, the date of the license surrender.

(vii) For revocations based on termination from a Federal health care program other than Medicare (for example, Medicaid), the date of the termination.

(viii) For revocations based on termination of a provider agreement under part 489 of this chapter, and as applicable to the type of provider involved, the later of the following:

(A) The date of the provider agreement termination; or

(B) The date that CMS establishes under § 489.55.

(ix) For revocations based on § 424.535(a)(23), the effective dates are as follows:

(A) If the standard or condition violation involves the suspension, revocation, or termination (or surrender in lieu of further disciplinary action) of the provider's or supplier's Federal or State license, certification, accreditation, or MDPP recognition, the effective date is the date of the license, certification, accreditation, or MDPP recognition suspension, revocation, termination, or surrender.

(B) If the standard or condition violation involves a non-operational practice location, the effective date is the date the non-operational status began.

(C) If the standard violation involves a felony conviction of an individual or entity described in § 424.67(b)(6)(i), the effective date is the date of the felony conviction.

(D) For all standard violations not addressed in paragraphs (A) through (C), the effective date in paragraph (g)(1) applies if the effective date in paragraph (g)(3) does not.

(3) If the action that resulted in the revocation occurred prior to the effective date of the provider's or supplier's enrollment, the effective date of the revocation is the same as the effective date of enrollment.

* * * * *

83. Section 424.541 is added to read as follows:

§ 424.541 Stay of enrollment.

(a)(1) CMS may stay an enrolled provider's or supplier's enrollment if the provider or supplier:

(i) Is non-compliant with at least one enrollment requirement in Title 42; and.

(ii) Can remedy the non-compliance via the submission of, as applicable to the situation, a Form CMS-855, Form CMS-20134, or Form CMS-588 change of information or revalidation application.

(2) During the period of any stay imposed under this section, the following apply:

(i) The provider or supplier remains enrolled in Medicare;

(ii) Claims submitted by the provider or supplier with dates of service within the stay period will be denied.

(3) A stay of enrollment lasts no longer than 60 days from the postmark date of the notification letter.

(4) CMS notifies the affected provider or supplier in writing of the imposition of the stay.

(b)(1) If a provider or supplier receives written notice from CMS or its contractor that the provider or supplier is subject to a stay under this section, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to the stay as described in paragraph (b) of this section.

(2) CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (b)(1) of this section.

(3) Any rebuttal submitted pursuant to paragraph (b) of this section must:

(i) Be in writing.

(ii) Specify the facts or issues about which the provider or supplier disagrees with the stay's imposition and/or the effective date, and the reasons for disagreement.

(iii) Submit all documentation the provider or supplier wants CMS to consider in its review of the stay.

(iv) Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or nonphysician practitioner), the authorized official or delegated official (as those terms are defined in 42 CFR 424.502), or a legal representative (as defined in 42 CFR 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

(4) The provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (b)(1) of this section and fully compliant with all of the requirements of paragraph (b)(3) of this section constitutes a waiver of all rebuttal rights under this section.

(5) Upon receipt of a timely and compliant stay rebuttal, CMS reviews the rebuttal to determine whether the imposition of the stay and/or the effective date thereof are correct.

(6) A determination made under paragraph (b) of this section is not an initial determination under § 498.3(b) and therefore not appealable.

(7) Nothing in paragraph (b) of this section requires CMS to delay the imposition of a stay pending the completion of the review described in paragraph (b)(5) of this section.

(8)(i) Nothing in paragraph (b) of this section requires CMS to delay the imposition of a deactivation or revocation, pending the completion of the review described in paragraph (b)(5) of this section.

(ii)(A) If CMS deactivates the provider or supplier during the stay, any rebuttal to the stay that the provider or supplier submits that meets the requirements of paragraph (b) of this

section is combined and considered with the provider's or supplier's rebuttal to the deactivation under § 424.546 if CMS has not yet made a determination on the stay rebuttal pursuant to this section.

(B) In all cases other than that described in paragraph (b)(8)(ii)(A) of this section, a stay rebuttal that was submitted in compliance with the requirements of paragraph (b) of this section is considered separately and independently of any review of any other rebuttal or, for revocations, appeal under 42 CFR part 498.

84. Section 424.555 is amended by revising paragraph (b) to read as follows:

§ 424.555 Payment liability.

* * * * *

(b) No payment may be made for otherwise Medicare covered items or services furnished to a Medicare beneficiary by a provider or supplier if the billing privileges of the provider or supplier are deactivated, denied, or revoked, or if the provider or supplier is currently under a stay of enrollment. The Medicare beneficiary has no financial responsibility for expenses, and the provider or supplier must refund on a timely basis to the Medicare beneficiary any amounts collected from the Medicare beneficiary for these otherwise Medicare covered items or services.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

85. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

86. Section 425.20 is amended—

- a. By revising the definitions of “Assignable beneficiary” and “Assignment window”;
- b. In the definition of “At-risk beneficiary” by—
 - i. Removing the periods at the end of paragraphs (5) and (6), and adding in their place

semicolons; and

- ii. Revising paragraph (7);
- c. By adding the definitions of “Beneficiary eligible for Medicare CQMs” and “Expanded window for assignment” in alphabetical order;
- d. In the definition of “Experienced with performance-based risk Medicare ACO initiatives” by revising paragraph (2);
- e. In the definition of “Inexperienced with performance-based risk Medicare ACO initiatives” by revising paragraph (2);
- f. In the definition of “Rural health center” by—
 - i. Removing the word “center” and adding in its place the word “clinic”; and
 - ii. Removing the phrase “under § 405.2401(b)” and adding in its place the phrase “under § 405.2401(b) of this chapter”.

The revisions and additions read as follows:

§ 425.20 Definitions.

* * * * *

Assignable beneficiary means a Medicare fee-for-service beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). For performance year 2025 and subsequent performance years, a Medicare fee-for-service beneficiary who does not meet this requirement but who meets both of the following criteria will also be considered an assignable beneficiary—

(1) Receives at least one primary care service with a date of service during a specified 24-month expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).

(2) Receives at least one primary care service with a date of service during a specified 12-

month assignment window from a Medicare-enrolled practitioner who is one of the following:

- (i) A physician assistant (as defined at § 410.74(a)(2) of this chapter).
- (ii) A nurse practitioner (as defined at § 410.75(b) of this chapter).
- (iii) A clinical nurse specialist (as defined at § 410.76(b) of this chapter).

* * * * *

Assignment window means the 12-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both.

At-risk beneficiary * * *

- (7) Is entitled to Medicare because of disability; or

* * * * *

Beneficiary eligible for Medicare CQMs means a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs), who is either of the following:

- (1) A Medicare fee-for-service beneficiary (as defined at § 425.20) who –

- (i) Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

- (ii) Had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or certified nurse specialist.

- (2) A Medicare fee-for-service beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

* * * * *

Expanded window for assignment means the 24-month period used to assign beneficiaries

to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window and the preceding 12 months.

Experienced with performance-based risk Medicare ACO initiatives * * *

(2) Forty percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in any of the 5 most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years.

* * * * *

Inexperienced with performance-based risk Medicare ACO initiatives * * *

(2) Less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in each of the 5 most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years.

* * * * *

87. Section 425.106 is amended by revising paragraph (c)(5) to read as follows:

§ 425.106 Shared governance.

* * * * *

(c) * * *

(5) In cases in which the composition of the ACO's governing body does not meet the

requirements of paragraph (c)(2) of this section, the ACO must describe why it seeks to differ from these requirements and how the ACO will provide meaningful representation in ACO governance by Medicare beneficiaries.

* * * * *

88. Section 425.204 is amended by revising paragraph (c)(3) to read as follows:

§ 425.204 Content of the application.

* * * * *

(c) * * *

(3) If an ACO requests an exception to the governing body requirement in § 425.106(c)(2), the ACO must describe—

(i) Why it seeks to differ from the requirement; and

(ii) How the ACO will provide meaningful representation in ACO governance by Medicare beneficiaries.

* * * * *

89. Section 425.302 is amended by revising paragraph (a)(3)(iii) to read as follows:

§ 425.302 Program requirements for data submission and certifications.

(a) * * *

(3) * * *

(iii) For performance years starting on January 1, 2019 through 2023, the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified by CMS at § 425.506(f).

* * * * *

90. Section 425.308 is amended by adding paragraph (b)(9) to read as follows:

§ 425.308 Public reporting and transparency.

* * * * *

(b) * * *

(9) The number of MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305 of this chapter) participating in the ACO that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level as set forth in § 425.507.

* * * * *

91. Section 425.316 is amended by revising paragraphs (e)(2) introductory text and (e)(2)(i) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * * *

(e) * * *

(2) If CMS determines that an ACO participating in advance investment payments became experienced with performance-based risk Medicare ACO initiatives during its first or second performance year of its agreement period or that the ACO became a high revenue ACO during any performance year of its agreement period, CMS—

(i) Will cease payment of advance investment payments no later than the quarter after the ACO became experienced with performance-based risk Medicare ACO initiatives or became a high revenue ACO.

* * * * *

92. Section 425.400 is amended—

a. By revising paragraph (a)(2)(ii);

b. In paragraph (a)(3)(i), by removing the phrase “most recent 12 months” and adding in its place the phrase “most recent 12 or 24 months, as applicable.”;

- c. By revising paragraph (c)(1)(vii) introductory text;
- d. By adding paragraph (c)(1)(viii); and
- e. By revising paragraphs (c)(2)(i) introductory text and (c)(2)(ii).

The revisions and addition read as follows:

§ 425.400 General.

(a) * * *

(2) * * *

(ii) Assignment will be updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described in §§ 425.402 and 425.404.

* * * * *

(c) * * *

(1) * * *

(vii) For the performance year starting on January 1, 2023 as follows:

* * * * *

(viii) For the performance year starting on January 1, 2024, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 96202 and 96203 (codes for caregiver behavior management training).

(3) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(4) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(5) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care

visit).

(6) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(7) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(viii)).

(8) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(9) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(10) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(11) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(12) 99439 (code for non-complex chronic care management).

(13) 99457 and 99458 (codes for remote physiologic monitoring).

(14) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(15) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(16) 99495 and 99496 (codes for transitional care management services).

(17) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(18) 9X015, 9X016, and 9X017 (codes for caregiver training services).

(B) HCPCS codes:

(1) G0101 (code for cervical or vaginal cancer screening).

(2) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(3) G0402 (code for the Welcome to Medicare visit).

(4) G0438 and G0439 (codes for the annual wellness visits).

- (5) G0442 (code for alcohol misuse screening service).
- (6) G0443 (code for alcohol misuse counseling service).
- (7) G0444 (code for annual depression screening service).
- (8) G0463 (code for services furnished in ETA hospitals).
- (9) G0506 (code for chronic care management).
- (10) G2010 (code for the remote evaluation of patient video/images).
- (11) G2012 and G2252 (codes for virtual check-in).
- (12) G2058 (code for non-complex chronic care management).
- (13) G2064 and G2065 (codes for principal care management services).
- (14) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).
- (15) G2211 (code for complex evaluation and management services add-on).
- (16) G2214 (code for psychiatric collaborative care model).
- (17) G3002 and G3003 (codes for chronic pain management).
- (18) GXXX1 and GXXX2 (codes for community health integration services).
- (19) GXXX3 and GXXX4 (codes for principal illness navigation services).
- (20) GXXX5 (code for social determinants of health risk assessment services).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(viii)(A) of this section or a HCPCS code specified in paragraph (c)(1)(viii)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

(2) * * *

(i) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, when the assignment window or applicable expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the COVID-19 Public Health

Emergency defined in § 400.200 of this chapter, in determining beneficiary assignment, we use the primary care service codes identified in paragraph (c)(1) of this section, and additional primary care service codes as follows:

* * * * *

(ii) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, the additional primary care service codes specified in paragraph (c)(2)(i) of this section are applicable to all months of the assignment window or applicable expanded window for assignment (as defined in § 425.20), when the assignment window or applicable expanded window for assignment includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter.

93. Section 425.402 is amended—

- a. By revising paragraph (b)(1);
- b. By adding paragraph (b)(5);
- c. By revising paragraph (c) introductory text; and
- d. In paragraph (e)(2)(ii)(A), by removing the reference “§ 425.400(a)(4)(ii)” and adding in its place the reference “§ 425.226(a)(1)”.

The revisions and addition read as follows:

§ 425.402 Basic assignment methodology.

* * * * *

(b) * * *

(1) Identify all beneficiaries that had at least one primary care service during the applicable assignment window with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in paragraph (c) of this section.

* * * * *

(5) For performance year 2025 and subsequent performance years, CMS employs the following third step to assign Medicare fee-for-service beneficiaries who were not identified by the criterion specified in paragraph (b)(1) of this section:

(i) Identify all beneficiaries who had at least one primary care service with a non-physician ACO professional in the ACO during the applicable assignment window.

(ii) For the beneficiaries identified in paragraph (b)(5)(i) of this section, identify those beneficiaries that had at least one primary care service with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in paragraph (c) of this section during the applicable expanded window for assignment.

(iii) Identify all primary care services furnished to beneficiaries identified in paragraph (b)(5)(ii) of this section by ACO professionals in the ACO who are primary care physicians as defined under § 425.20, non-physician ACO professionals, and physicians with specialty designations included in paragraph (c) of this section during the applicable expanded window for assignment.

(iv) A beneficiary identified in paragraph (b)(5)(ii) of this section is assigned to the ACO if the allowed charges for primary care services furnished to the beneficiary by ACO professionals in the ACO who are primary care physicians, physicians with specialty designations included in paragraph (c) of this section, or non-physician ACO professionals during the applicable expanded window for assignment are greater than the allowed charges for primary care services furnished by primary care physicians, physicians with specialty designations as specified in paragraph (c) of this section, nurse practitioners, physician assistants, and clinical nurse specialists who are—

(A) ACO professionals in any other ACO; or

(B) Not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

(c) ACO professionals considered in the second and third step of the assignment methodology in paragraphs (b)(4) and (5) of this section include physicians who have one of the following primary specialty designations:

* * * * *

94. Section 425.506 is amended by revising paragraph (f) introductory text to read as follows:

§ 425.506 Incorporating reporting requirements related to adoption of certified electronic health record technology.

* * * * *

(f) For performance years starting on January 1, 2019 through 2023, ACOs in a track that—

* * * * *

95. Section 425.507 is added to subpart F to read as follows:

§ 425.507 Incorporating promoting interoperability requirements related to the Quality Payment Program for performance years beginning on or after January 1, 2024.

(a) For performance years beginning on or after January 1, 2024, unless otherwise excluded under paragraph (b) of this section, all MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305 of this chapter) participating in the ACO must satisfy all of the following:

(1) Report the MIPS Promoting Interoperability performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O as either of the following --

(i) All MIPS eligible clinicians, QPs, and Partial QPs participating in the ACO as an individual, group, or virtual group; or

(ii) The ACO as an APM entity.

(2) Earn a performance category score for the MIPS Promoting Interoperability

performance category at the individual, group, virtual group, or APM entity level.

(b) A MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity may be excluded from the requirements set forth in paragraph (a) of this section if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity --

(1) Does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii) of this chapter;

(2) Is an eligible clinician as defined at § 414.1305 of this chapter who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2) of this chapter; or

(3) Has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2) of this chapter.

96. Section 425.512 is amended—

- a. By revising paragraph (a)(2);
- b. In paragraph (a)(5)(i) introductory text, by removing the phrase “paragraph (a)(2) of this section” and adding in its place the phrase “paragraphs (a)(2) and (a)(7) of this section”;
- c. By revising paragraph (a)(5)(i)(A)(2), (a)(5)(iii)(A) and (B);
- d. By adding paragraph (a)(7);
- e. In paragraph (b)(1)—
 - i. By adding a new first sentence;
 - ii. By removing the reference “paragraph (b)(2)” and adding in its place the reference “paragraph (b)(3)”;
- f. By redesignating paragraphs (b)(2) and (3) as paragraphs (b)(3) and (4), respectively;
- g. By adding new paragraph (b)(2);

- h. By revising the newly redesignated paragraph (b)(3)(ii)(B);
- i. In newly redesignated paragraph (b)(3)(iii), by removing the phrase “paragraph (b)(2)(ii) of this section” and adding in its place the phrase “paragraph (b)(3)(ii) of this section”;
- j. By revising newly redesignated paragraph (b)(3)(iv)(A);
- k. In newly redesignated paragraph (b)(3)(iv)(B), by removing the phrase “paragraph (b)(2)(iv)(A) of this section” and adding in its place the phrase “paragraph (b)(3)(iv)(A) of this section”;
- l. In newly redesignated paragraph (b)(3)(v)—
 - i. By removing the phrase “paragraph (b)(2)(iv)(B) of this section” and adding in its place the phrase “paragraph (b)(3)(iv)(B) of this section”;
 - ii. By removing the phrase “paragraph (b)(2)(iii) of this section” and adding in its place the phrase “paragraph (b)(3)(iii) of this section”;
 - iii. By removing the phrase “paragraph (b)(2)(iv) of this section” and adding in its place the phrase “paragraph (b)(3)(iv) of this section”;
- m. In newly redesignated paragraph (b)(4) introductory text, by removing the phrase “paragraphs (b)(1) and (b)(2) of this section” and adding in its place the phrase “paragraphs (b)(1) through (b)(3) of this section”; and
- n. By revising paragraph (c)(3).

The revisions and additions read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) For the first performance year of an ACO's first agreement period under the Shared Savings Program, the ACO will meet the quality performance standard if it meets the requirements under this paragraph (a)(2).

(i) For performance years 2022 and 2023. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and the case minimum requirement at § 414.1380 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs, and the CAHPS for MIPS survey, for the applicable performance year.

(ii) For performance year 2024. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

(iii) For performance year 2025 and subsequent performance years. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

* * * * *

(5) * * *

(i) * * *

(A) * * *

(2) If the ACO reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the

APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

* * * * *

(iii) * * *

(A) For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures, any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this chapter) under the APP.

(B) For performance year 2025 and subsequent years, the ACO does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this chapter) under the APP.

* * * * *

(7) For performance years 2024 and subsequent performance years, if an ACO reports all of the required measures, meeting the data completeness requirement at § 414.1340 of this chapter for each measure in the APP measure set and receiving a MIPS quality performance category score as described at § 414.1380(b)(1) of this chapter, and the ACO's total available measure achievement points used to calculate the ACO's MIPS quality performance category score is reduced under § 414.1380(b)(1)(vii)(A) of this chapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(b) * * *

(1) For performance year 2023. ***

(2) For performance year 2024 and subsequent performance years. For an ACO that

reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this chapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this chapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(3) of this section. The sum of these values may not exceed 100 percent.

(3) * * *

(ii) * * *

(B) Values of zero for each measure that CMS does not evaluate because the measure is unscored or the ACO does not meet the case minimum or the minimum sample size for the measure.

* * * * *

(iv) * * *

(A) (I) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of either of the following:

(i) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85. An ACO's assigned beneficiaries without an available numeric ADI national percentile rank are excluded from the calculation of the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85.

(ii) The proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(2) CMS calculates the proportions specified in paragraph (b)(3)(iv)(A)(I)(ii) of this section as follows:

(i) For performance year 2023, the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries' person years.

(ii) For performance year 2024 and subsequent performance years, the proportion of the ACO's assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries.

* * * * *

(c) * * *

(3) If CMS determines the ACO meets the requirements of paragraph (c)(1) of this section and the ACO reports quality data via the APP, CMS calculates the ACO's quality score as follows:

(i) For performance years 2021 and 2022, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2023, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(iii) For performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets the data completeness requirement at § 414.1340 of this

chapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this chapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

* * * * *

§ 425.600 [Amended]

97. Amend § 425.600 in paragraph (f)(4)(ii) by removing the reference “425.656(d)” and adding in its place the reference “425.656(e)”.

§ 425.601 [Amended]

98. Amend § 425.601 in paragraph (a) introductory text by removing the reference “§ 425.226(a)(1)” and adding in its place the reference “§ 425.400(a)(4)(ii)”.

§ 425.611 [Amended]

99. Amend § 425.611 in paragraph (c)(2)(iii) by removing the reference “§ 425.652(a)(8)(iv)” and adding in its place the reference “§ 425.658(c)(1)(ii)”.

100. Section 425.630 is amended—

- a. By revising paragraphs (b)(2) and (3), (e)(3), (f) introductory text, and (g)(4);
- b. In paragraph (h)(1)(i), by removing “or” at the end of the paragraph;
- c. In paragraph (h)(1)(ii), by removing “.” at the end of the paragraph, and adding in its place “; or”; and
- d. By adding paragraphs (h)(1)(iii) and (i).

The revisions and additions read as follows:

§ 425.630 Option to receive advance investment payments.

* * * * *

(b) * * *

(2) CMS has determined that the ACO is eligible to participate in the Shared Savings Program.

(3) The ACO is inexperienced with performance-based risk Medicare ACO initiatives during its first two performance years and participates in the BASIC track's glide path as follows:

(i) For performance year 1, the ACO must participate in Level A of the BASIC track's glide path.

(ii) For performance year 2, the ACO may participate in Level A of the BASIC track's glide path (in accordance with § 425.600(a)(4)(i)(C)(3)) or Level B.

(iii) For performance years 3 through 5, the ACO may participate in Level A of the BASIC track's glide path (in accordance with § 425.600(a)(4)(i)(C)(3)), or Levels B through E.

* * * * *

(e) * * *

(3) *Duration for spending payments.* An ACO may spend an advance investment payment over its entire agreement period. An ACO must repay to CMS any unspent funds remaining at the end of the ACO's agreement period, except if the ACO terminated its current participation agreement under § 425.220 beginning with the third or fourth performance year and immediately enters a new agreement period to continue its participation in the Shared Savings Program, the ACO must spend its advance investment payments within 5 performance years of when it first received advance investment payments and repay to CMS any unspent funds remaining at the end of that fifth performance year.

* * * * *

(f) *Payment methodology.* An ACO receives two types of advance investment payments: a one-time payment of \$250,000 and quarterly payments calculated pursuant to the methodology defined in paragraph (f)(2) of this section. CMS notifies in writing each ACO of its

determination of the amount of advance investment payment and the notice will inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part. If CMS does not make any advance investment payment, the notice will specify the reason(s) why and inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part.

* * * * *

(g) * * *

(4) If an ACO terminates its participation agreement during the agreement period in which it received an advance investment payment, the ACO must repay all advance investment payments it received, unless the ACO terminated its current participation agreement under § 425.220 at the end of performance year 2 or later during the agreement period in which it received advance investment payments and immediately enters a new agreement period to continue its participation in the program. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

* * * * *

(h) * * *

(1) * * *

(iii) Voluntarily terminates its participation agreement in accordance with § 425.220(a).

* * * * *

(i) *Reporting information on advance investment payments.* The ACO must report information on its receipt of and use of advance investment payments, as follows:

(1) The ACO must publicly report information about the ACO's use of advance investment payments for each performance year, in accordance with § 425.308(b)(8).

(2) In a form and manner and by a deadline specified by CMS, the ACO must report to

CMS the same information it is required to publicly report under § 425.308(b)(8).

§ 425.650 [Amended]

101. Amend § 425.650 in paragraph (a) by removing the references “§§ 425.601, 425.602, and 425.603” and adding in their place the references “§§ 425.601, 425.602, 425.603, and 425.659”.

102. Section 425.652 is amended—

a. In paragraph (a) introductory text, by removing the reference “§ 425.226(a)(1)” and adding in its place the reference “§ 425.400(a)(4)(ii)”;

b. By revising paragraphs (a)(5)(v)(A), (a)(8), (a)(9) introductory text, and (a)(9)(ii);

c. In paragraph (a)(9)(iv), by removing the reference “§ 425.400(a)(4)(ii)” and adding in its place the reference “§ 425.226(a)(1)”;

d. In paragraph (a)(9)(v), by removing the phrase “, or a combination of these two adjustments”;

e. By adding paragraphs (a)(9)(vi) and (b)(2)(ii)(C); and

f. By revising paragraph (b)(2)(iv)(A).

The revisions and additions read as follows:

§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.

(a) * * *

(5) * * *

(v) * * *

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO

for the performance year according to § 425.400(a)(4)(ii).

* * * * *

(8) Except as provided in paragraph (a)(8)(iii) of this section, adjusts the historical benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), or for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period (as specified under § 425.658). CMS does all of the following to determine the adjustment, if any, applied to the historical benchmark:

(i) Computes the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

(ii) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single per capita value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(iii) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single per capita value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

(iv) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the higher of the following:

(A) The positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries:

ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(B) A prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(v) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will receive an adjustment to its benchmark equal to the prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(9) For the first performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, for a change in the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores under § 425.659, and for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination

under § 425.315. To adjust the benchmark, CMS does the following:

* * * * *

(ii) Redetermines the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

* * * * *

(vi) Redetermines factors based on prospective HCC risk scores calculated for benchmark years by calculating the prospective HCC risk scores using the CMS-HCC risk adjustment methodology that applies for the calendar year corresponding to the applicable performance year in accordance with § 425.659(b)(1).

* * * * *

(b) * * *
(2) * * *
(ii) * * *

(C) Multiply the growth rate calculated in this paragraph (b)(2)(ii) by a regional risk score growth cap adjustment factor computed as described in § 425.655.

* * * * *

(iv) * * *

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the performance year using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

* * * * *

103. Section 425.654 is amended by revising paragraph (a)(1)(i) to read as follows:

§ 425.654 Calculating county expenditures and regional expenditures.

(a) * * *

(1) * * *

(i) Determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the relevant benchmark or performance year using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

* * * * *

104. Section 425.655 is added to subpart G to read as follows:

§ 425.655 Calculating the regional risk score growth cap adjustment factor.

(a) *General.* This section describes the methodology for calculating the regional risk score growth cap adjustment factor that will be applied to the regional growth rate component of the three-way blend used to update the historical benchmark as described in § 425.652(b) for agreement periods beginning on January 1, 2024, and in subsequent years.

(b) *Calculating county risk scores.* CMS does all of the following to determine county prospective HCC and demographic risk scores for use in calculating the ACO's regional risk scores:

(1) Determines average county prospective HCC and demographic risk scores for the assignable population of beneficiaries in each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the relevant benchmark or performance year using the assignment window or expanded window for assignment that is consistent with

the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(2) Makes separate risk score calculations for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(c) *Calculating regional risk scores.* CMS calculates an ACO's regional prospective HCC and demographic risk scores by:

(1) Weighting the county-level risk scores determined under paragraph (b) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Aggregating the values determined under paragraph (c)(1) of this section for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area.

(d) *Determining aggregate growth in regional risk scores.* CMS determines aggregate growth in regional prospective HCC and demographic risk scores by:

(1) Determining growth in regional prospective HCC and demographic risk scores determined in paragraph (c) of this section (expressed as a ratio of the performance year regional risk score to the BY3 regional risk score) for each of the following populations of beneficiaries:

- (i) ESRD.
- (ii) Disabled.
- (iii) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Determines the aggregate growth in regional risk scores by calculating a weighted average of the growth in regional prospective HCC risk scores or demographic risk scores, as applicable, across the populations described in paragraph (d)(1) of this section. When calculating the weighted average growth in prospective HCC risk scores or demographic risk scores, as applicable, the weight applied to the growth in risk scores for each Medicare enrollment type is equal to the product of the ACO's regionally adjusted historical benchmark expenditures for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

(e) *Determining the cap on regional risk score growth.* CMS determines the cap on regional prospective HCC risk score growth by:

(1) Computing the sum of the aggregate growth in regional demographic risk scores as determined in paragraph (d)(2) of this section and 3 percentage points.

(2) Calculating the ACO's aggregate market share by calculating the weighted average of the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the performance year as determined in § 425.652(b)(2)(iv) across the populations described in § 425.652(b)(1). In calculating this weighted average, the weight applied to the share for each Medicare enrollment type is equal to the ACO's performance year assigned beneficiary person years for that enrollment type.

(3) Adding to the sum computed in paragraph (e)(1) of this section an amount equal to the product of:

(i) The ACO's aggregate market share as determined in paragraph (e)(2) of this section

(ii) The difference between the aggregate growth in regional prospective HCC risk scores as determined in paragraph (d)(2) of this section and the sum determined in paragraph (e)(1) of this section. This difference is subject to a floor of zero.

(f) *Determining the regional risk score growth cap adjustment factor.* CMS determines the regional risk score growth cap adjustment factor for each Medicare enrollment type to be applied in calculating the regional growth rate described in § 425.652(b) by comparing the aggregate growth in regional prospective HCC risk scores determined in paragraph (d)(2) of this section and, if applicable, the growth in regional prospective HCC risk scores for individual Medicare enrollment types as determined in paragraph (d)(1) of this section with the cap determined in paragraph (e) of this section.

(1) If the aggregate growth in regional prospective HCC risk scores determined in paragraph (d)(2) of this section does not exceed the cap on regional risk score growth determined in paragraph (e) of this section, CMS will set the regional risk score growth cap adjustment factor equal to 1 for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) If the aggregate growth in regional prospective HCC risk scores determined in paragraph (d)(2) of this section exceeds the cap determined in paragraph (e) of this section, CMS will compare the growth in regional prospective HCC risk scores for each Medicare enrollment type as determined in paragraph (d)(1) of this section with the cap on regional risk score growth

determined in paragraph (e) of this section.

(i) If the growth in regional prospective HCC risk scores for the enrollment type determined in paragraph (d)(1) of this section does not exceed the cap on regional risk score growth determined in paragraph (e) of this section, CMS will set the regional risk score growth cap adjustment factor equal for that enrollment type equal to 1.

(ii) If the growth in regional prospective HCC risk scores determined in paragraph (d)(1) for the enrollment type exceeds the cap on regional risk score growth determined in paragraph (e) of this section, CMS will set the regional risk score growth cap adjustment factor for that enrollment type equal to the growth in regional prospective HCC risk scores for the enrollment type determined in paragraph (d)(1) of this section divided by the cap on regional risk score growth determined in paragraph (e) of this section.

105. Section 425.656 is amended—

- a. By revising paragraph (b)(3);
- b. In paragraph (c)(2), by removing the phrase “paragraph (d) of this section” and adding in its place the phrase “paragraph (e) of this section”;
- c. By redesignating paragraphs (d) and (e) as paragraphs (e) and (f), respectively;
- d. By adding new paragraph (d);
- e. In newly redesignated paragraph (e)(5)(ii), by removing the phrase “paragraph (d)(5)(i) of this section” and adding in its place the phrase “paragraph (e)(5)(i) of this section”;
- f. In newly redesignated paragraph (e)(5)(iv), by removing the phrase “paragraphs (d)(1) through (3)” and adding in its place the phrase “paragraphs (e)(1) through (3)”;
- g. In newly redesignated paragraph (f) introductory text, by removing the phrase “paragraphs (b) through (d)” and adding in its place the phrase “paragraphs (b) through (e)”.

The revision and addition read as follows:

§ 425.656 Calculating the regional adjustment to the historical benchmark.

* * * * *

(b) * * *

(3) Adjusts for differences in severity and case mix between the ACO’s assigned beneficiary population for BY3 and the assignable population of beneficiaries for the ACO’s regional service area for BY3. The assignable population of beneficiaries is identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

* * * * *

(d) *Expression of the regional adjustment as a single value.* (1) CMS expresses the regional adjustment as a single value by taking a person-year weighted average of the Medicare enrollment type-specific regional adjustment values determined in paragraph (c) of this section.

(2) CMS uses the regional adjustment expressed as a single value for purposes of determining the adjustment, if any, that will be applied to the benchmark in accordance with § 425.652(a)(8).

* * * * *

106. Section 425.658 is amended—

- a. In paragraph (b)(3)(i), by removing the sentence “The ACO will receive the regional adjustment to its benchmark as described in § 425.656.”;
- b. By redesignating paragraph (c) as paragraph (d);
- c. By adding new paragraph (c);
- d. By revising newly redesignated paragraph (d); and
- e. By adding new paragraph (e).

The revision and additions read as follows:

§ 425.658 Calculating the prior savings adjustment to the historical benchmark.

* * * * *

(c) Calculate the per capita savings adjustment.

(1) If an ACO is eligible for the prior savings adjustment as determined in paragraph (b)(3) of this section, the prior savings adjustment will equal the lesser of the following:

(i) 50 percent of the pro-rated average per capita amount computed in paragraph (b)(3)(ii) of this section.

(ii) 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary and expressed as a single value by taking a person-year weighted average of the Medicare enrollment type-specific values.

(2) [Reserved]

(d) Applicability of the prior savings adjustment. CMS compares the per capita prior savings adjustment determined in paragraph (c)(1) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8).

(e) Recalculation of the prior savings adjustment during an agreement period.

(1) The ACO's prior savings adjustment is recalculated for changes to the ACO's savings or losses for a performance year used in the prior savings adjustment calculation in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315.

(2) For a new ACO identified as a re-entering ACO, the prior savings adjustment is recalculated for changes to savings or losses for a performance year used in the prior savings adjustment calculation, if the savings or losses of the ACO in which the majority of the new ACO's participants were participating change in accordance with § 425.316(b)(2)(ii)(B) or (C)

due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315.

107. Section 425.659 is added to subpart G to read as follows:

§ 425.659 Calculating risk scores used in Shared Savings Program benchmark calculations.

(a) *General.* CMS accounts for differences in severity and case mix of the ACO's assigned beneficiaries and assignable beneficiaries (as defined under § 425.20) in calculations used in establishing, adjusting and updating the ACO's historical benchmark.

(b) *Prospective Hierarchical Condition Category (HCC) risk score calculation.* In determining Medicare FFS beneficiary prospective HCC risk scores for a performance year and each benchmark year of the ACO's agreement period, CMS does the following:

(1) CMS specifies the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores for Medicare FFS beneficiaries (as defined under § 425.20) for use in Shared Savings Program calculations as follows:

(i) In calculating risk scores for Medicare FFS beneficiaries for a performance year, CMS applies the CMS-HCC risk adjustment methodology applicable for the corresponding calendar year.

(ii) For agreement periods beginning before January 1, 2024, CMS applies the CMS-HCC risk adjustment methodology for the calendar year corresponding to benchmark year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

(iii) For agreement periods beginning on January 1, 2024, and in subsequent years, CMS applies the CMS-HCC risk adjustment methodology for the calendar year corresponding to the performance year, as specified under paragraph (b)(1)(i) of this section, in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

(2) CMS does the following to calculate the prospective HCC risk scores identified in paragraph (b)(1) of this section for a benchmark or performance year:

(i) Removes the Medicare Advantage coding intensity adjustment, if applicable.

(ii) Renormalizes prospective HCC risk scores by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) based on a national assignable FFS population for the relevant benchmark or performance year.

(iii) Calculates the average prospective HCC risk score by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries).

108. Section 425.702 is amended—

a. In paragraph (c)(1)(ii) introductory text, by removing the phrase “process development” and adding in its place the phrase “protocol development”;

b. By revising paragraph (c)(1)(ii)(A)(3); and

c. By adding paragraph (c)(1)(iii).

The revision and addition read as follows:

§ 425.702 Aggregate reports.

* * * * *

(c) * * *

(1) * * *

(ii) * * *

(A) * * *

(3) Beneficiary identifier.

* * * * *

(iii) For performance year 2024 and subsequent performance years, at the beginning of

the quality submission period, CMS, upon the ACO's request for the data for purposes of population-based activities relating to improving health or reducing growth in health care costs, protocol development, case management, and care coordination, provides the ACO with information about its fee-for-service population.

(A) The following information is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- (1) Beneficiary name.
- (2) Date of birth.
- (3) Beneficiary identifier.
- (4) Sex.

(B) Information in the following categories, which represents the minimum data necessary for ACOs to conduct health care operations work, is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- (1) Demographic data such as enrollment status.
- (2) Health status information such as risk profile and chronic condition subgroup.
- (3) Utilization rates of Medicare services such as the use of evaluation and management, hospital, emergency, and post-acute services, including the dates and place of service.

* * * * *

PART 455---PROGRAM INTEGRITY: MEDICAID

109. The authority citation for part 455 continues to read as follows:

Authority: 42 U.S.C. 1302.

110. Section 455.416 is amended by revising paragraph (c) to read as follows:

§ 455.416 Termination or denial of enrollment.

* * * * *

(c) Must deny enrollment or terminate the enrollment of any provider that is terminated on or after January 1, 2011, under title XVIII of the Act and under the Medicaid program or CHIP of any other State, and is currently included in the termination database under § 455.417.

* * * * *

111. Section 455.417 is added to read follows:

§ 455.417 Termination periods and termination database periods.

(a)(1) Subject to paragraph (c) of this section, a provider remains in the termination notification database referenced in section 1902(11) of the Act for a period that is the lesser of:

(i) The length of the termination period imposed by the State that initially terminated the provider or the reenrollment bar (as described in § 424.535(c) of this chapter) imposed by the Medicare program in the case of a Medicare revocation; or

(ii) 10 years (for those Medicaid or CHIP terminations that are greater than 10 years).

(2) All other State Medicaid agencies or CHIPs must terminate or deny the provider from their respective programs (pursuant to § 455.416(c)) for at least the same length of time as the termination database period described in paragraph (a)(1) of this section.

(b)(1) Nothing in paragraph (a) of this section prohibits:

(i) The initially terminating State from imposing a termination period of greater than 10 years consistent with that State's laws, or

(ii) Another State from terminating the provider, based on the original State's termination, for a period:

(A) Of greater than 10 years; or

(B) That is otherwise longer than that imposed by the initially terminating State.

(2) The period established under paragraph (b)(1)(ii) of this section must be no shorter than the period in which the provider is to be included in the termination database under paragraph (a) of this section.

(c)(1) If the initially terminating State agency or the Medicare program reinstates the provider prior to the end of the termination period originally imposed by the initially terminating State agency or Medicare, CMS removes the provider from the termination database after the reinstatement has been reported to CMS.

(2) If the provider is removed from the database pursuant to paragraph (c)(1), CMS may immediately reinstate the provider in the database (with no interval between the two periods) if a basis for doing so exists under part 455 or 424 of this chapter.

(d) For purposes of this section only, terminations under § 455.416(c) are not considered “for cause” terminations and therefore need not be reported to CMS for inclusion in the termination database.

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

112. The authority citation for part 489 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395i-3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395hh.

113. Section 489.30 is amended by---

- a. Revising paragraph (b)(1); and
- b. Adding paragraphs (b)(6) and (7).

The revision and additions read as follows:

§ 489.30 Allowable charges: Deductibles and coinsurance.

* * * *

(b) * * *

(1) The basic allowable charges are the Part B annual deductible and 20 percent of the customary (insofar as reasonable) charges in excess of that deductible, except as specified in paragraphs (b)(6) and (7) of this section.

* * * *

(6) In the case of a rebatable drug (as defined in section 1847A(i)(2)(A) of the Act), including a selected drug (as defined in section 1192(c) of the Act), furnished on or after April 1, 2023, in a calendar quarter in which the payment amount for such drug as specified in section 1847A(i)(3)(A)(ii)(I)(aa) or (bb), as applicable, exceeds the inflation-adjusted amount (as defined in section 1847A(i)(3)(C) of the Act) for such drug, the basic allowable charges are the Part B annual deductible and 20 percent of the of the inflation-adjusted payment amount for the rebatable drug in excess of that deductible, which is applied as a percent to the payment amount for such calendar quarter.

(7) In the case of insulin furnished on or after July 1, 2023 through an item of durable medical equipment covered under section 1861(n) of the Act, the coinsurance amount shall not exceed \$35 for a month's supply of such insulin each calendar month. This limitation on the coinsurance amount shall apply for the duration of the calendar month in which the date of service (or services) occurs. In addition, the coinsurance amount shall not exceed \$105.00 for three months' supply of insulin. This limitation on the coinsurance amount shall apply for the duration of the calendar month in which the date of service (or services) occurs and the two following calendar months.

PART 491-CERTIFICATION OF CERTAIN HEALTH FACILITIES

114. The authority citation for part 491 continues to read as follows:

Authority: 42 U.S.C. 263a and 1302.

115. Section 491.2 is amended by—

- a. Adding the definitions of “Certified nurse-midwife (CNM)”, “Clinical psychologist (CP)”, “Clinical social worker”, “Marriage and family therapist”, and “Mental health counselor” in alphabetical order; and
- b. Revising the definition of “Nurse practitioner”.

The additions and revisions read as follows:

§ 491.2 Definitions.

* * * * *

Certified nurse-midwife (CNM) means an individual who meets the applicable education, training, and other requirements at § 410.77(a) of this chapter.

Clinical psychologist (CP) means an individual who meets the applicable education, training, and other requirements of § 410.71(d) of this chapter.

Clinical social worker means an individual who meets the applicable education, training, and other requirements at § 410.73(a) of this chapter.

* * * * *

Marriage and family therapist means an individual who meets the applicable education, training, and other requirements at 410.53 of this chapter.

Mental health counselor means an individual who meets the applicable education, training, and other requirements at 410.54 of this chapter.

Nurse practitioner means a person who meets the applicable State requirements governing the qualifications for nurse practitioners, and who meets at least one of the following conditions:

- (1) Is currently certified as a primary care nurse practitioner by a recognized national certifying body that has established standards for nurse practitioners and possesses a master's degree in nursing or a Doctor of Nursing Practice (DNP) doctoral degree.

* * * * *

116. Section 491.8 is amended by revising paragraphs (a)(3) and (6) to read as follows:

§ 491.8 Staffing and staff responsibilities.

(a) * * *

- (3) The physician assistant, nurse practitioner, certified nurse-midwife, clinical social worker, clinical psychologist, marriage and family therapist, or mental health counselor member

of the staff may be the owner or an employee of the clinic or center, or may furnish services under contract to the clinic or center. In the case of a clinic, at least one physician assistant or nurse practitioner must be an employee of the clinic.

* * * * *

(6) A physician, nurse practitioner, physician assistant, certified nurse-midwife, clinical social worker, clinical psychologist, marriage and family therapist, or a mental health counselor is available to furnish patient care services at all times the clinic or center operates. In addition, for RHCs, a nurse practitioner, physician assistant, or certified nurse-midwife is available to furnish patient care services at least 50 percent of the time the RHC operates.

* * * * *

**PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD
TECHNOLOGY INCENTIVE PROGRAM**

117. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

118. Section 495.4 is amended in the definition of “Certified electronic health record technology (CEHRT)” by revising paragraph (2) introductory text to read as follows:

§ 495.4 Definitions.

* * * * *

Certified electronic health record technology (CEHRT) * * *

(2) For 2019 and subsequent years, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition, or subsequent Base EHR definition (as defined at 45 CFR 170.102) and has been certified to the ONC health IT certification criteria, as adopted and updated in 45 CFR 170.315—

* * * * *

PART 498 - APPEALS PROCEDURES FOR DETERMINATIONS THAT AFFECT PARTICIPATION IN THE MEDICARE PROGRAM AND FOR DETERMINATIONS THAT AFFECT THE PARTICIPATION OF ICFs/IID AND CERTAIN NFs IN THE MEDICAID PROGRAM

119. The authority citation for part 498 continues to read as follows:

Authority: 42 U.S.C. 1302, 1320a-7j, and 1395hh.

120. In § 498.2 amend the definition of “Supplier” by revising paragraph (6) to read as follows:

§ 498.2 Definitions.

* * * * *

Supplier * * *

(6) For purposes of this part, a physical therapist in private practice, an occupational therapist in private practice, or a speech-language pathologist.

* * * * *

PART 600 - ADMINISTRATION, ELIGIBILITY, ESSENTIAL HEALTH BENEFITS, PERFORMANCE STANDARDS, SERVICE DELIVERY REQUIREMENTS, PREMIUM AND COST SHARING, ALLOTMENTS, AND RECONCILIATION

121. The authority citation for part 600 continues to read as follows:

Authority: Section 1331 of the Patient Protection and Affordable Care Act of 2010 (Pub. L. 111-148, 124 Stat. 119), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111 – 152, 124 State. 1029).

122. Revise § 600.125 to read as follows:

§ 600.125 Revisions to a certified BHP Blueprint.

(a) *Submission of revisions.* A State may seek to revise its certified Blueprint in whole or in part at any time through the submission of a revised Blueprint to HHS. A State must submit a revised Blueprint to HHS whenever necessary to reflect--

(1) Changes in Federal law, regulations, policy interpretations, or court decisions that affect provisions in the certified Blueprint;

(2) Significant changes that alter core program operations under 600.145(f) or the BHP benefit package; or

(3) Changes to enrollment, disenrollment, and verification policies described in the certified Blueprint.

(b) *Submission and effective dates.* The effective date of a revised Blueprint may not be earlier than the first day of the quarter in which an approvable revision is submitted to HHS. A revised Blueprint is deemed received when HHS receives an electronic copy of a cover letter signed by the Governor or Governor's designee and a copy of the currently approved Blueprint with proposed changes in track changes.

(c) *Timing of HHS review.* (1) A revised Blueprint will be deemed approved unless HHS, within 90 calendar days after receipt of the revised Blueprint, sends the State-

(i) Written notice of disapproval; or

(ii) Written notice of additional information it needs in order to make a final determination.

(2) If HHS requests additional information, the 90-day review period for HHS action on the revised Blueprint-

(i) Stops on the day HHS sends a written request for additional information or the next business day if the request is sent on a Federal holiday or weekend; and

(ii) Resumes on the next calendar day of the original 90-day review period after HHS receives an a complete response from the State of all the requested additional information, unless

the information is received after 5 p.m. eastern standard time on a day prior to a non-business day or any time on a non-business day, in which case the review period resumes on the following business day.

(3) The 90-day review period cannot stop or end on a non-business day. If the 90th calendar day falls on a non-business day, HHS will consider the 90th day to be the next business day.

(4) HHS may send written notice of its need for additional information as many times as necessary to obtain the complete information necessary to review the revised Blueprint.

(5) HHS may disapprove a Blueprint that is not consistent with section 1331 of the ACA or the regulations set forth in this Part at any time during the review process, including when the 90-day review clock is stopped due to a request for additional information.

(d) *Continued operation.* The State is responsible for continuing to operate under the terms of the existing certified Blueprint until and unless -

(1) The State adopts a revised Blueprint by obtaining approval by HHS under this section;

(2) The State follows the procedures described in § 600.140(a) for terminating a BHP;

(3) The State follows the procedures described in § 600.140(b) for suspending a BHP;

(4) The Secretary withdraws certification of a BHP under 600.142.

(e) *Withdrawal of a revised Blueprint.* A State may withdraw a proposed Blueprint revision during HHS' review if the State has not yet implemented the proposed changes and provides written notice to HHS.

(f) *Reconsideration of decision.* HHS will accept a State request for reconsideration of a decision not to certify a revised Blueprint and provide an impartial review against the standards for certification if requested.

(g) *Public health emergency.* For the Public Health Emergency, as defined in § 400.200 of this chapter, the State may submit to the Secretary for review and certification a revised Blueprint, in the form and manner specified by HHS, that makes temporary significant changes to its BHP that are directly related to the Public Health Emergency and would increase enrollee access to coverage. Such revised Blueprints may have an effective date retroactive to the first day of the Public Health Emergency and through the last day of the Public Health Emergency, or a later date if requested by the State and certified by HHS. Such revised Blueprints are not subject to the public comment requirements under § 600.115(c).

123. Section 600.135 is amended by revising the section heading and paragraph (a) to read as follows:

§ 600.135 Notice and timing of HHS action on an initial BHP Blueprint submission.

(a) *Timely response.* HHS will act on all initial Blueprint certification requests in a timely manner.

* * * * *

124. Section 600.140 is amended by adding introductory text and paragraphs (b) through (d) to read as follows:

§ 600.140 State termination or suspension of a BHP.

A State that no longer wishes to operate a BHP may terminate or suspend its BHP:

* * * * *

(b) If a State decides to suspend its BHP, or to request an extension of a previously-approved suspension, the State must:

(1) Submit to the Secretary a suspension application or a suspension extension application, as applicable. The suspension or suspension extension application must:

(i) Demonstrate that the benefits BHP-eligible individuals will receive during the suspension are equal to the benefits provided under the certified BHP Blueprint in effect on the effective date of suspension;

(ii) Demonstrate that the median actuarial value of the coverage provided to the BHP-eligible individuals during the suspension is no less than the median actuarial value of the coverage under the certified BHP Blueprint in effect on the effective date of suspension;

(iii) Demonstrate that the premiums imposed on BHP-eligible individuals during the suspension are no higher than the premiums charged under the certified BHP Blueprint in effect on the effective date of suspension, except that premiums imposed during the suspension may be adjusted for inflation, as measured by the Consumer Price Index;

(iv) Demonstrate that the eligibility criteria for coverage during the suspension is not more restrictive than the criteria described in § 600.305;

(v) Describe the period, not to exceed 5 years, that the State intends to suspend its BHP or to extend a previously-approved suspension;

(vi) Be submitted at least 9 months in advance of the proposed effective date of the suspension or extension, except for States seeking to suspend a BHP in the first plan year that begins following publication of this rule must submit an application within 30 days of publication of this rule; and

(vii) Include an evaluation of the coverage provided to BHP eligible individuals during the suspension period, if the State is seeking an extension.

(2) Resolve concerns expressed by HHS and obtain approval by the Secretary of the suspension or suspension extension application. Suspensions may not be in effect prior to approval by HHS, except for States seeking to suspend a BHP in the first plan year that begins following publication of this rule.

(3) At least 90 days prior to the effective date of the suspension, submit written notice to all enrollees and participating standard health plan offerors that it intends to suspend the program, if the enrollees will experience a change in coverage, or standard health plan offerors will experience a change in the terms of coverage. The notices to enrollees must include information regarding the State's assessment of their eligibility for all other insurance affordability programs in the State. Notices must meet the accessibility and readability standards at 45 CFR 155.230(b).

(4) Within 12 months of the suspension effective date, submit to HHS the data required by § 600.610 needed to complete the financial reconciliation process with HHS.

(5) Submit the annual report required by § 600.170(a)(2), describing the balance of the trust fund, and any interest accrued on such amount.

(6) Annually, remit to HHS any interest that has accrued on the balance of the BHP trust fund during the suspension period in the form and manner specified by HHS.

(7) At least 9 months before the end of the suspension period described in paragraph (b)(1)(iv) of this section, or earlier date elected by the State, the State must submit to HHS a transition plan that describes how the State will be reinstate its BHP consistent with the requirements of this part, or terminate the program in accordance with paragraph (a) of this section. The State must meet the noticing requirements of paragraph (b)(3) of this section prior to terminating or reinstating the BHP.

(c) The State cannot implement the suspension or extension of the suspension without prior approval by the Secretary.

(d) The Secretary may withdraw approval of the suspension plan, if the terms of paragraph (b) of this section are not met, if the State ends implementation of the alternative coverage program for any reason, or if HHS finds significant evidence of beneficiary harm, financial malfeasance, fraud, waste, or abuse by the BHP agency or the State consistent with §

600.142 of this part. If HHS withdraws the approved suspension plan, the State must reinstate its BHP under the terms of this Part, or terminate the program under paragraph (a) of this section.

(1) Withdrawal of approval of a suspension under this section must occur only after the Secretary provides the State with notice of the findings upon which the Secretary is basing the withdrawal; a reasonable period for the State to address the finding; and an opportunity for a hearing before issuing a final finding.

(2) The Secretary must make every reasonable effort to work with the State to resolve proposed findings without withdrawing approval of a suspension and in the event of a decision to withdraw approval, will accept a request from the State for reconsideration.

(3) The effective date of an HHS determination withdrawing approval of the suspension plan shall not be earlier than 120 days following issuance of a final finding under paragraph (b)(6)(i) of this section.

(4) Within 30 days following a final finding under paragraph (b)(6)(i) of this section, the State must submit a transition plan to HHS.

125. Section 600.145 is amended by revising paragraphs (a) and (f)(2) to read as follows:

§ 600.145 State program administration and operation.

(a) *Program operation.* The State must implement its BHP in accordance with:

(1) The approved and fully certified State BHP Blueprint, any approved modifications to the State BHP Blueprint and the requirements of this chapter and applicable law; or

(2) The approved suspension application described in § 600.140.

* * * * *

(f) * * *

(2) Eligibility and health services appeals as specified in 600.335.

* * * * *

126. Section 600.170 amended by revising paragraph (a) to read as follows:

§ 600.170 Annual report content and timing.

(a) *Content.* (1) The State that is operating a BHP must submit an annual report that includes any evidence of fraud, waste, or abuse on the part of participating providers, plans, or the State BHP agency known to the State, and a detailed data-driven review of compliance with the following:

(i) Eligibility verification requirements for program participation as specified in § 600.345.

(ii) Limitations on the use of Federal funds received by the BHP as specified in § 600.705.

(iii) Requirements to collect quality and performance measures from all participating standard health plans focusing on quality of care and improved health outcomes as specified in sections 1311(c)(3) and (4) of the Affordable Care Act and as further described in § 600.415.

(iv) Requirements specified by the Secretary at least 120 days prior to the date of the annual report as requiring further study to assess continued State compliance with Federal law, regulations and the terms of the State's certified Blueprint, based on a Federal review of the BHP pursuant to § 600.200, and/or a list of any outstanding recommendations from any audit or evaluation conducted by the HHS Office of Inspector General that have not been fully implemented, including a statement describing the status of implementation and why implementation is not complete.

(2) A State that has suspended its BHP under § 600.140(b) of this part must submit an annual report that includes the following:

(i) The balance of the BHP trust fund and any interest accrued on that balance;

(ii) An assurance that the coverage provided to individuals who would be eligible for a BHP under § 600.305 of this part continues to meet the standards described in § 600.140(b)(1)(i), (ii), and (iii) of this part; and

(iii) Any additional information specified by the Secretary at least 120 days prior to the date of the annual report.

* * * * *

127. Section 600.330 is amended by adding paragraph (f) to read as follows:

§ 600.330 Coordination with other insurance affordability programs.

* * * * *

(f) *Accessibility*. Eligibility notices must be written in plain language and be provided in a manner which ensures individuals with disabilities are provided with effective communication and takes steps to provide meaningful access to eligible individuals with limited English proficiency.

128. Section 600.335 is amended by revising paragraph (b) to read as follows:

§ 600.335 Appeals.

* * * * *

(b) *Appeals process*. Individuals must be given the opportunity to appeal through the appeals rules of the State's Medicaid program:

(1) BHP eligibility determinations; and

(2) Delay, denial, reduction, suspension, or termination of health services, in whole or in part, including a determination about the type or level of service

* * * * *

Xavier Becerra,

Secretary,

Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this proposed rule, previously finalized measures and specialty measures sets will continue to apply for the CY 2024 performance period/2026 MIPS payment year and future years. Previously finalized measures and specialty measures sets are located in the CY 2017 through CY 2023 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, and 87 FR 70250 through 70633. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a consensus-based entity (CBE) are shown in Table A of this Appendix as follows: CBE # / eCQM CBE #.

Table Group A: New Quality Measures Proposed for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

A.1. Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level)

Category	Description
CBE # / eCQM CBE #:	CBE 3633e (clinician level) CBE 3662e (clinician group level)
Quality #:	TBD
Description:	This measure provides a standardized method for monitoring the performance of diagnostic CT to discourage unnecessarily high radiation doses, a risk factor for cancer, while preserving image quality. It is expressed as a percentage of CT exams that are out-of-range based on having either excessive radiation dose or inadequate image quality relative to evidence-based thresholds based on the clinical indication for the exam. All diagnostic CT exams of specified anatomic sites performed in inpatient, outpatient and ambulatory care settings are eligible. This eCQM requires the use of additional software to access primary data elements stored within radiology electronic health records and translate them into data elements that can be ingested by this eCQM. Additional details are included in the Guidance field.
Measure Steward:	Alara Imaging, Inc. in collaboration with the University of California, San Francisco (UCSF)
Numerator:	Calculated CT size-adjusted dose greater than or equal to a threshold specific to the CT dose and Image Quality Category, or Calculated CT Global Noise value greater than or equal to a threshold specific to the CT Dose and Image Quality Category.
Denominator:	All CT scans in adults aged 18 years and older at the start of the measurement period that have a CT Dose and Image Quality Category and were performed during the measurement period.
Exclusions:	Denominator, where a CT scan with a CT Dose and Image Quality Category = full body.
Measure Type:	Intermediate Outcome
High Priority Measure:	Yes
Collection Type:	eCQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure to enhance patient safety and drive quality care in diagnostic radiology and assess outcomes of care for patients undergoing diagnostic CT imaging. This measure would improve patient safety by supporting clinician actions that are associated with a reduction in population-level cancer risks, in addition to associated cancer-related morbidity and mortality. As a result, this measure may also reduce the cost of caring for these patients.</p> <p>In the U.S., over 80 million CT scans are performed annually, and the radiation doses associated with these exams are a safety issue, as unnecessarily high radiation doses lead to harm by exposing patients to elevated cancer risk.³⁹⁷ Numerous consensus-based clinical recommendations and guidelines ask radiologists to track, optimize, and lower the radiation doses they use for CT. These recommendations and guidelines are based on evidence that radiation doses are highly variable across institutions, higher than needed for diagnosis, and can lead to excessive patient harm. These recommendations and guidelines also indicate that physicians collect and compare their doses to benchmarks and reduce their doses if they are found to routinely exceed these benchmarks.^{398 399}</p>

³⁹⁹ American College of Radiology, The American Association of Physicists in Medicine, & The Society for Pediatric Radiology. (2022). ACR-AAPM Technical Standard for Diagnostic Medical Physics Performance Monitoring of Computed Tomography (CT) Equipment. <https://www.acr.org/-/media/ACR/Files/Practice-Parameters/CT-Equip.pdf>, <https://www.aapm.org/pubs/ACRAAPMcollaboration.asp>.

This measure would support radiologists with a clinically relevant outcome measure within MIPS and meet the high priority definition for MIPS reporting as an outcome and patient safety measure. This measure received support for rulemaking from the Measure Applications Partnership (MAP) and was endorsed by a CBE (CBE 3633e/3662e).

This measure would enhance the accessibility of data contained in electronic clinical data systems for increased efficiency, which could decrease clinician burden. Using electronic and standardized data already collected as part of routine clinical care, this measure assesses the radiation dose for every exam with complete information and assessment of imaging quality to ensure that efforts to reduce radiation dose do not result in poor image quality. It is also consistent with our emphasis on expanding the use of digital quality measures. The measure steward has created “as low as reasonably achievable” (ALARA) translation software that ingests radiology variables from Picture Archiving and Communication System (PACS), Radiology Information System (RIS), and electronic health records (EHR) systems for use with this quality measure. The software translates data from these systems into new variables that are specified in Logical Observation Identifiers Names and Codes (LOINC®), reflecting radiation dose and image quality information for each scan, that can then be used for reporting this measure. This translation software would be available to all clinicians and sites without cost, including any updates that need to be completed. Additionally, software tutorials, training, and webinars would also be provided at no cost.

This measure is more robust than existing measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques, which is proposed for removal under Table C.12 of this Appendix to reduce duplication concurrent to the proposed adoption of this measure. This proposed measure assesses actual radiation dosing in patients undergoing diagnostic CT imaging, whereas the current measure assesses only utilization of dose optimization techniques (that is, a radiologist’s choice of protocol) as documented within the final report. This proposed measure is an intermediate outcome measure of radiation dose, which is strongly associated with cancer risk. This measure covers the two key process of care components that determine the radiation doses: a) the choice of imaging protocol; and b) decisions regarding the technical settings used for that type of CT exam. It assesses radiation dose according to thresholds determined by the underlying clinical indication for imaging and not based upon radiologists’ choice of protocol. In addition, this measure includes assessment of image quality as a means of thereby protecting the diagnostic value of CT imaging from unintended consequences of excessive dose reduction. Minimizing dose by adherence to these factors would reduce the number of future cancers that would result from the radiation exposure, and that could in turn lead to a reduction in morbidity, mortality, and health care costs.^{400 401 402}

A.2. Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.
Measure Steward:	American Academy of Hospice and Palliative Medicine (AAHPM)
Numerator:	The Feeling Heard and Understood (HU) survey is calculated using top-box scoring within 2 months (60 days) of the ambulatory palliative care visit. Numerator 1: Patient felt heard and understood by this provider and team. Numerator 2: Patient felt this provider and team put my best interests first when making recommendations about my care. Numerator 3: Patient felt this provider and team saw me as a person, not just someone with a medical problem. Numerator 4: Patient felt this provider and team understood what is important to me in my life.
Denominator:	Denominator 1, 2, 3, and 4: All patients aged 18 years and older who had an ambulatory palliative care visit.
Exclusions:	Patients who did not complete at least one of the four patient experience HU survey items and return the HU survey within 60 days of the ambulatory palliative care visit. Patients who respond on the patient experience HU survey that they did not receive care by the listed ambulatory palliative care provider in the last 60 days (disavowal). Patients who were deceased when the HU survey reached them. Patients for whom a proxy completed the entire HU survey on their behalf for any reason (no patient involvement).

Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this patient-reported outcome measure because it would fill a gap in the current quality measure inventory for patients receiving palliative care. The Feeling Heard and Understood survey was developed to capture patients' assessment of their care for ongoing quality reporting and improvement. This survey measures patients' satisfaction of their ambulatory palliative care experience based on how well they felt heard and understood by physicians, nurses, and other hospital staff. This proposed measure captures the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Assessment of how well patients feel heard and understood complements and adds an important dimension to existing quality measures of care planning by including patient experience of care for this unique patient population.⁴⁰³</p> <p>This measure is intended to facilitate and improve effective patient-provider communication that better engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. The outcome of this measure is that the patient feels heard and understood by the ambulatory palliative care provider and team. Through the benefits of enhanced patient-provider communication, this measure would improve the quality of care received and outcomes for patients receiving palliative care.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure is predicated on existing guidelines including the National Consensus Project Clinical Practice Guidelines for Quality Palliative Care and supported by a systematic review of current evidence for palliative care interventions.⁴⁰⁴ Evidence from the systematic review supports advanced care planning. Studies have shown that quality palliative care and communication between patients and providers are associated with increased preference-concordant care.⁸</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.3. Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of pregnant or postpartum patients who received a cardiovascular disease (CVD) risk assessment with a standardized instrument.
Measure Steward:	University of California, Irvine
Numerator:	Patients who are assessed for CVD risk via California Maternal Quality Care Collaborative (CMQCC) standardized algorithm. A completed CVD risk assessment will determine the patient to be at low risk or high risk of CVD. Patients will be assessed at their initial encounter with their healthcare provider for pregnancy-related care [prenatal visit, L&D, postpartum visit] and may need to repeat assessments if new symptoms develop.
Denominator:	Patients who have an office visit for prenatal or postpartum care, regardless of gestational age or prior prenatal care at other sites, for any age (including pregnant and postpartum minors), within outpatient obstetric (OB) visit at the hospital or in affiliated clinics; and labor and delivery (L&D) including private providers contracting with the hospital for delivery.
Exclusions:	Patients who have another reason for visiting the clinic [not prenatal or postpartum care] and have a positive pregnancy test but have not established the clinic as OB provider (e.g., plan to terminate the pregnancy or seek prenatal services elsewhere). Prior history of known CVD.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it would fill a high priority clinical gap area under the wellness and prevention domain for maternal health. This process measure would address screening and care for pregnant/postpartum patients by assessing for the completion of a standardized CVD risk assessment for this high-risk population. This measure would represent a new quality measure clinical concept for maternal health.</p> <p>CVD is the leading cause of maternal mortality in the U.S., accounting for over one-third of all pregnancy-related deaths.⁴⁰⁵ Peripartum cardiomyopathy (PPCM) constitutes the largest group among CVD-related deaths. About 24 percent of all CVD pregnancy-related deaths (and 31 percent of cardiomyopathy deaths) were determined to be potentially preventable.⁴⁰⁶ CVD also accounts for many folds higher maternal morbidity, a longer length of hospital stays, intensive care unit (ICU) admissions, and future pregnancy risks.⁴⁰⁷</p> <p>This measure would monitor follow-up to universal cardiovascular risk assessment in all pregnant patients at their first encounter with an obstetrics provider.⁴⁰⁸ The measure facilitates clinicians to evaluate pregnant or postpartum patients presenting with symptoms such as shortness of breath, cough, or excessive fatigue in the context of risk factors, vital sign abnormalities, and abnormal physical examination findings.⁴⁰⁹</p> <p>Normal physiological changes in pregnancy lead to signs and symptoms that may be indistinguishable from those of CVD. The overlap of signs and symptoms of normal pregnancy with those of CVD further complicates timely diagnosis. Most women who died from CVD during pregnancy and/or the postpartum period were not suspected of having a cardiac diagnosis and symptoms were attributed to an alternate diagnosis. Roughly 84 percent of pregnant patients who died from CVD presented with symptoms concerning for cardiopulmonary disease. However, only 61.1 percent of these patients were referred to cardiologists, and, of those, only 7 percent were referred antenatally. Given the large proportion of pregnancy-related mortality attributed to cardiovascular disease, these data suggest that an implementation of universal screening may improve overall</p>

[https://www.internationaljournalofcardiology.com/article/S0167-5273\(04\)00040-3/fulltext](https://www.internationaljournalofcardiology.com/article/S0167-5273(04)00040-3/fulltext).

Category	Description
	<p>maternal outcomes and lower overall healthcare costs.⁴¹⁰ Use of this measure promotes improvement in the screening of pregnant and postpartum women for the accurate diagnosis of heart failure or CVD versus attributing symptoms of pneumonia or other clinical side effects from pregnancy such as persistent cough, shortness of breath, and/or bilateral infiltrates on a chest x-ray.</p> <p>The intent of assessing the CVD risk during pregnancy/postpartum care is to increase education and awareness in this population and would empower patients to seek early medical care if new signs and symptoms develop that may be suggestive of CVD. It may have implications for long-term health outcomes with improvements in the CVD risk factor profile in the future. The use of a standardized CVD measure to risk-stratify pregnant and postpartum patients may improve the timely identification of CVD, thereby decreasing maternal morbidity and/or mortality.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The Alliance for Innovation on Maternal Health (AIM) identified the California Maternal Quality Care Collaborative (CMQCC) CVD Assessment Algorithm for Pregnant and Postpartum Patients as an emerging best practice and an important tool for assessing symptoms and risk in a standardized way and advocated for the use of the tool in its Cardiac Conditions in Obstetrical Care Bundle (CCOC).⁴¹¹</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.4. First Year Standardized Waitlist Ratio (FYSWR)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) group who are under the age of 75, and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The measure is calculated to compare the observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, adjusted for age, patient comorbidities, and other risk factors at incidence of dialysis.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Patients in the practitioner group's denominator listed on the kidney or kidney-pancreas transplant waitlist or who received living donor transplants within the first year following initiation of dialysis.
Denominator:	The denominator for the First Year Standardized Waitlist Ratio (FYSWR) is the expected number of waitlist or living donor transplant events in the practitioner group according to each patient's treatment history for patients within the first year following initiation of dialysis, adjusted for age, incident comorbidities, dual Medicare-Medicaid eligibility, Area Deprivation Index (from patient's residence zip code) and transplant center characteristics, among patients under 75 years of age who were not already waitlisted and did not have kidney transplantation prior to the initiation of end-stage renal disease (ESRD) dialysis. The number of days at risk (time from start of dialysis to the earliest of being placed on the waitlist, receiving a living donor transplant, death, or one year from start of dialysis) for each patient is used to calculate the expected waitlist or living donor transplant events.
Exclusions:	Patients aged 75 or older on their initiation of dialysis date. Patients admitted to a skilled nursing facility (SNF). Patients in hospice on their initiation of dialysis date or during the month of evaluation. Patients that were on the kidney or kidney-pancreas waitlist prior to initiation of dialysis. Patients who had a transplant prior to initiation of dialysis.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	If a dialysis practitioner group has fewer than 11 patients or 2 expected events, then the dialysis practitioner group is excluded from reporting outcomes.
Rationale:	<p>We are proposing this measure because it addresses a CMS high priority clinical topic: patients with ESRD. ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures (https://www.niddk.nih.gov/health-information/health-statistics/kidney-disease). While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant (https://pubmed.ncbi.nlm.nih.gov/34783494/). This measure assesses whether patients that are in their first year of dialysis were placed on the kidney or kidney-pancreas transplant waitlist or received a living donor kidney transplant. Data submitted by the measure developer indicates a performance gap for a process that can be directly linked to improved patient outcomes. This measure is separate from the other transplant waitlist measure, proposed under Table A.5 of this Appendix, as it is limited to assessing the first year after initiation of dialysis and the timely addition of those patients to the transplant waitlist—a crucial step in driving positive outcomes in the patient population.</p> <p>National and large regional studies provide strong empirical support for the association between processes within the clinical scope and control of dialysis practitioners and subsequent patient transplant wait listing. For example, the clinical assessments, provisions and/or referrals made by a dialysis practitioner are contributing factors for consideration in patient transplant wait listing. In one large regional study conducted on facilities in the state of Georgia, a standardized dialysis facility referral ratio was developed, adjusted for age, demographics, and comorbidities.⁴¹² There was substantial variability across dialysis facilities in referral rates, and a Spearman correlation performed between ranking on the referral ratio and dialysis facility waitlist rates was highly significant ($r=0.35$, $p<0.001$).¹⁶ A national study using registry data (United States Renal Data System) from 2005-2007 examined the association between whether patients were informed about kidney transplantation (based on reporting on the Medical Evidence Form 2728 (https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf) and subsequent access to kidney transplantation (wait listing or receipt of a live donor transplant).⁴¹³ Approximately 30 percent of patients were uninformed about kidney transplantation, and this was associated with half the rate of access to transplantation compared to patients who were informed.¹⁷ In a related survey study of 388 hemodialysis patients, whether provision of information about transplantation by nephrologists or dialysis staff occurred was directly confirmed with patients.⁴¹⁴ The provision of such information was associated with a near threefold increase in likelihood of wait listing.¹⁸</p> <p>The intent of this measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant within the first year after dialysis initiation, with the intended objective of improving the overall</p>

Category	Description
	<p>health of patients on dialysis. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities and may include education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. These efforts depend heavily and, in many cases, primarily, on dialysis practitioner groups. Aspects that are not directly in the clinician/groups control can be influenced through coordination of care, strong communication with transplant centers, and advocacy for patients. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible.</p> <p>The MAP did not support this measure for rulemaking with the potential for mitigation. The Renal Standing Committee raised concerns regarding the evidence base and specifications and recommended that this measure be resubmitted for endorsement by a CBE. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies suggest a significant association between the clinician activities described above and the addition of patients to a transplant waitlist, which is necessary for patients to receive the improved outcomes associated with kidney transplant.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.5. Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The percentage of patients in each dialysis practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Results are averaged across patients prevalent on the last day of each month during the reporting year. The measure is a directly standardized percentage, which is adjusted for covariates (e.g., age and risk factors).
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Numerator 1: Percentage of Prevalent Patients Waitlisted (PPPW): The adjusted count of patient months in which the patient at the dialysis practitioner or practitioner group practice is on any kidney or kidney-pancreas transplant waitlist as of the last day of each month during the reporting year. Numerator 2: Percentage of Prevalent Patients Waitlisted in Active (aPPPW): The adjusted count of patient months in which the patient at the dialysis practitioner or practitioner group practice is on any kidney or kidney-pancreas transplant waitlist in an active status as of the last day of each month during the reporting year.
Denominator:	Denominator 1 and 2: All patient-months for patients who are under the age of 75 in the reporting month and who are assigned to a dialysis practitioner or practitioner group practice according to each patient's treatment history on the last day of each reporting month during the performance year. If a dialysis practitioner group has fewer than 11 patients during the performance year, the dialysis practitioner group is excluded from reporting outcomes.
Exclusions:	Patients who were admitted to a skilled nursing facility (SNF) during the month of evaluation were excluded from that month. Patients who were admitted to a skilled nursing facility (SNF) within one year of dialysis initiation according to the CMS-2728 form. Patients determined to be in hospice were excluded from month of evaluation and the remainder of reporting period. Patients with dementia at any time prior to or during the month.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	If a dialysis practitioner group has fewer than 11 patients during the performance year, the dialysis practitioner group is excluded from reporting outcomes.
Rationale:	<p>We are proposing this measure because it addresses a CMS priority clinical topic: patients with ESRD. ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures (https://www.niddk.nih.gov/health-information/health-statistics/kidney-disease). While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant (https://pubmed.ncbi.nlm.nih.gov/34783494/). This measure captures the adjusted count of patient months on the kidney and kidney-pancreas transplant waitlist for all dialysis patients in a dialysis practitioner or group practice by assessing patient status on the last day of each month during the reporting year and those on the transplant waitlist in active status as of the last day of the month during the reporting year. This process measure is directly linked to driving positive outcomes and measure data indicates a performance gap.</p> <p>Most ESRD patients have to wait to eventually access a deceased donor transplant (national median of roughly 4 years).⁴¹⁵ Maintenance of 'active status' on the transplant list requires ongoing collaboration between dialysis practitioners, transplant centers, and transplant networks, thereby ensuring sustained suitability for a transplant while optimizing the health of patients.²⁰ This maintenance process is associated with higher transplantation rates and lowered mortality rates while on the waitlist.⁴¹⁶ In addition, the maintenance of 'active status' is an important health equity issue. Research has found disparities in access to kidney transplant by race.⁴¹⁷ Race-neutral efforts by clinicians to encourage maintenance of patients on the waitlist may reduce such disparities while improving their performance on this measure.²¹</p> <p>This measure assesses monthly wait listing in active status of patients. It also evaluates and encourages maintenance of patients on the waitlist. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. In contrast to this measure, the First Year Standardized Waitlist Ratio measure proposed under Table A.4 of this Appendix focuses solely on new wait listings and living donor kidney transplants to incentivize early action, rather than ongoing maintenance on the waitlist, which this measure assesses.</p> <p>The MAP conditionally supported this measure for rulemaking pending an update of the measure's specifications to include only the PPPW (CBE 3695) rate that was recommended for endorsement by the CBE's Renal Standing Committee. While we agree with the MAP that full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets</p>

Category	Description
	<p>the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The CBE recommended endorsement for the PPPW subset of this measure. It is important to include the aPPPW rate in this measure as well to capture patients in active waitlist status and the full scope of the transplant list and the movement of patients between active and inactive status. The studies cited above provide the evidentiary basis for the adoption of this measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.6. Preventive Care and Wellness (composite)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	<p>Numerator 1: Patients who received an influenza immunization OR who reported previous receipt of an influenza immunization.</p> <p>Numerator 2: Patients who were administered any pneumococcal conjugate vaccine or polysaccharide vaccine on or after their 19th birthday and before the end of the measurement period.</p> <p>Numerator 3: Women with one or more mammograms any time on or between October 1 two years prior to the measurement period and the end of the measurement period.</p> <p>Numerator 4: Patients with one or more screenings for colorectal cancer. Appropriate screenings are defined by any one of the following criteria: - Fecal occult blood test (FOBT) during the measurement period. – Flexible sigmoidoscopy during the measurement period or the four years prior to the measurement period. – Colonoscopy during the measurement period or the nine years prior to the measurement period. – Computed tomography (CT) colonography during the measurement period or the four years prior to the measurement period. – Stool DNA (sDNA) with Fecal immunochemical test (FIT) during the measurement period or the two years prior to the measurement period.</p> <p>Numerator 5: Patients with a documented BMI during the encounter or during the previous twelve months, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the encounter.</p> <p>Numerator 6: - Patients who were screened for tobacco use at least once within the measurement period. – Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period. – Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Numerator 7: Patient visits where patients were screened for high blood pressure AND have a recommended follow-up plan documented, as indicated, if the blood pressure is elevated or hypertensive.</p>
Denominator:	<p>Denominator 1: All patients aged 6 months and older seen for a visit during the measurement period.</p> <p>Denominator 2: Patients 65 years of age and older with a visit during the measurement period.</p> <p>Denominator 3: Women 41 – 74 years of age with a visit during the measurement period.</p> <p>Denominator 4: Patients 45-75 years of age with a visit during the measurement period.</p> <p>Denominator 5: All patients aged 18 and older on the date of the encounter with at least one qualifying encounter during the measurement period.</p> <p>Denominator 6: - All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period. – All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period who were screened for tobacco use during the measurement period and identified as a tobacco user. – All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period.</p> <p>Denominator 7: All patient visits for patients aged 18 years and older at the beginning of the measurement period.</p>
Exclusions:	<p>Denominator Exclusion Population 1: Hospice services provided to patient any time during the measurement period. Anaphylaxis due to the vaccine on or before the date of the encounter.</p> <p>Denominator Exclusion Population 2: Patient received hospice services any time during the measurement period. Patient had anaphylaxis due to the pneumococcal vaccine any time during or before the measurement period. Denominator Exclusion Population 3: - Women who had a bilateral mastectomy or who have a history of a bilateral mastectomy or for whom there is evidence of a right and a left unilateral mastectomy. Hospice services used by patient any time during the measurement period. – Palliative care services used by patient any time during the measurement period. Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long term care with POS code 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>Denominator Exclusion Population 4: - Patients with a diagnosis or past history of total colectomy or colorectal cancer. – Patient was provided hospice services any time during the measurement period. – Patient was provided palliative care services any time during the measurement period. Patient age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>Denominator Exclusion Population 5: - Documentation stating the patient has received or is currently receiving palliative or hospice care. – Documentation of patient pregnancy anytime during the measurement period prior to and including the current encounter.</p> <p>Denominator Exclusion Population 6: Hospice services provided to patient any time during the measurement period (applicable to each of the 3 performance rates).</p> <p>Denominator Exclusion Population 7: Patient not eligible due to active diagnosis of hypertension.</p>
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS QCMs Specifications

Category	Description
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this composite measure which combines seven current preventive care measures with age and sex appropriate preventive screenings and wellness services to create a robust, broadly encompassing preventive care assessment. The measure developer submitted data demonstrating a performance gap for the composite measure. In testing, the developer identified a performance gap, where median performance on the combined measure was 52.7 percent, with a standard deviation of 11.2 percent.</p> <p>Initially, this measure would be implemented as a weighted average analytic, representing performance for quality actions linked to positive patient outcomes. This measure would set a more stringent performance standard by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care while ensuring more all-inclusive preventive care. By setting a more stringent performance standard through use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, we gain a better picture of overall preventive care practices as each component is important to either prevention of or early detection of disease (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/). This allows for early diagnosis of disease, thereby leading to earlier treatment, improved health outcomes, and a reduction in healthcare associated costs (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/).</p> <p>This measure consists of seven preventive care and screening processes that are consistent with guidelines from the U.S. Preventive Services Task Force (USPSTF), the Advisory Committee on Immunization Practices (ACIP), the American Association of Clinical Endocrinology (AACE), and the American College of Endocrinology (ACE). The seven screening processes are influenza immunization, pneumococcal immunization, breast and colorectal cancer screening, body mass index screening, tobacco use screening and cessation intervention, and screening for high blood pressure with follow-up. Each process received a recommendation of at least “Strong” or an equivalent rating from the corresponding body identified above.⁴¹⁸ The basis for each constituent measure was previously described in our prior rulemaking under the 2013 Physician Quality Reporting System (PQRS) in the CY 2012 PFS final rule (77 FR 69215 through 69267: Table 95 and 77 FR 69269 through 69271: Table 96), and each measure was retained with the implementation of MIPS (81 FR 77558 through 77675).</p> <p>In connection with the proposal of this measure, we also propose to remove measures Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan from traditional MIPS, while retaining those three measures for use in relevant MVPs as discussed under Table Group CC of this Appendix.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree with the MAP that full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that</p>

Category	Description
	<p>any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The preventive care and wellness composite measure is supported based upon the evidence discussed and cited within the respective rules in which each constituent measure was proposed and finalized as indicated previously in the rationale. A study of preventive services covered under the Affordable Care Act examined the extent to which lives could be saved if adults over 18 received them, including some addressed by this measure. The authors found preventive services ameliorate 9 of the 10 leading causes of death in America and could save at least 100,000 lives,⁴¹⁹ providing support for this composite measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.7. Connection to Community Service Provider

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.
Measure Steward:	Oregon Community Health Information Network (OCHIN)
Numerator:	Patients who had contact with a CSP for at least one of their HRSNs within 60 days after screening.
Denominator:	Patients aged 18 or older who screened positive for at least 1 of the 5 HRSNs domains (food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety) during the measurement period.
Exclusions:	Patients who are counseled on connection with a CSP and explicitly opt-out.
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it would address five social and economic determinants we have identified as both a measurement priority and performance gap. Addressing this gap is a central part of our Health Equity strategic plan pillar, as discussed in the 2023 PFS final rule (87 FR 70253 through 70259) for previously finalized measure Q487: Screening for Social Drivers of Health. This proposed measure assesses patients who screen positive for one or more of the five HRSNs for contact with a CSP for at least one of their HRSNs within 60 days of the screening. The five HRSNs are food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety. A CSP is defined as any independent, for-profit, non-profit, state, territorial, or local agency capable of addressing core or supplemental HRSNs. This measure excludes patients who opt out of contact with a CSP.</p> <p>Studies have shown that social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health (https://doi.org/10.7326/M17-2441). Thus, systematically screening patients for social drivers of health and referring them to community-based resources as needed can result in improved health outcomes (https://doi.org/10.7326/M17-2441). Furthermore, improving the clinician’s understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, improve a patient’s overall health and well-being (https://doi.org/10.31478/201705b). As an example, early findings from the CMMI Accountable Health Communities (AHC) Model shows those patients within the “Assistance Track” (the intervention group offering navigation assistance to connect patients with the community services they need) had 9 percent fewer emergency department visits as compared to their control group counterparts who did not receive navigation assistance during the first year following screening (https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt).</p> <p>The USPSTF also recently released a technical brief on screening and interventions for social risk factors, which notes that social risk factors are mentioned in two-thirds of USPSTF recommendation statements, and six other professional medical organizations explicitly promote clinician engagement in social risk screening and referrals.⁴²⁰ The report highlights that, in studies reporting these outcomes, there were few if any unintended consequences resulting from the implementation of social risk screening and intervention despite perceived barriers to implementation.²⁴</p> <p>This measure leverages the data and experience from the AHC Model (https://innovation.cms.gov/innovation-models/ahcm), which has screened nearly one million beneficiaries for HRSNs. The AHC Model requires that all AHC-screened beneficiaries with unmet HRSNs receive community referral summaries tailored to their needs (https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt).</p> <p>This measure is consistent with our priority to advance health equity throughout our various programs. We are working to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our enrollees need to thrive (https://www.cms.gov/pillar/health-equity).</p> <p>The MAP conditionally supported this measure for rulemaking pending testing indicating the measure is reliable, valid, and feasible, and endorsement by a CBE. While we agree with the MAP that the full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies show that social drivers of health contribute to poorer health. Referrals to CSPs provide a direct means through which clinicians can assist patients in overcoming social drivers of health.</p> <p>As we have previously stated, we request that interested parties consider when submitting a quality measure for possible inclusion whether the measure is “beyond the measure concept phase of development and [has] started testing, at a minimum, with strong encouragement and preference for measures that have completed or are near completion of reliability and validity testing” (83 FR 53636; 84 FR 62954). While we consider whether or not a measure is fully tested, it is not the only relevant</p>

⁴²⁰ Eder, M., Henninger, M., Durbin, S., Iacocca, M. O., Martin, A., Gottlieb, L. M., & Lin, J. S. (2021). Screening and Interventions for Social Risk Factors: Technical Brief to Support the US Preventive Services Task Force. *JAMA*, 326(14), 1416–1428. <https://doi.org/10.1001/jama.2021.12825>.

Category	Description
	<p>standard. This measure builds upon measure Q487, collecting data on positive screening and subsequent connection to a CSP for assistance. Having both measures in MIPS allows for assessment of two critical steps in addressing health equity; first ensuring that screening is completed on all patients and the second connecting patients who are facing a HRSN with resources that can help address these needs.</p> <p>Addressing health equity is a pressing issue which deserves serious focus and rapid action. This measure is an important next step for use of drivers of health (DOH) data, which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Clinicians choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. This is vital to allow further testing and development of additional health equity outcome measures. While we would encourage submission of health equity related measures, MIPS does allow for clinician choice in quality measure selection and would not require submission of this measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.8. Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients who had an intravitreal or periocular corticosteroid injection (e.g., triamcinolone, preservative-free triamcinolone, dexamethasone, dexamethasone intravitreal implant, or fluocinolone intravitreal implant) who, within seven (7) weeks following the date of injection, are screened for elevated intraocular pressure (IOP) with tonometry with documented IOP \leq 25 mm Hg for injected eye OR if the IOP was $>$ 25 mm Hg, a plan of care was documented.
Measure Steward:	American Society of Retina Specialists
Numerator:	Number of patients who, within seven (7) weeks following the date of injection, are screened for elevated intraocular pressure (IOP) with tonometry with documented IOP \leq 25 mm Hg for injected eye listed in chart OR if the IOP was $>$ 25 mm Hg, a plan of care was documented.
Denominator:	Patients who had an intravitreal or periocular corticosteroid injection (e.g., triamcinolone, preservative-free triamcinolone, dexamethasone, dexamethasone intravitreal implant, or fluocinolone intravitreal implant) with a patient encounter during the performance period.
Exclusions:	Patients with a diagnosis of hypotony.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this process measure because it would address the MIPS priority area of patient safety. Patients treated with corticosteroid therapy are at increased risk for elevated IOP leading to steroid-induced glaucoma and their quality of life may be negatively impacted due to visual impairments.⁴²¹ Ensuring that appropriate monitoring is conducted to detect and treat this complication is important to prevent significant visual morbidity. Researchers who completed a systemic review identified that 10.9 percent to 79.0 percent of patients will develop clinically significant IOP elevations and should have a follow-up within 7 weeks, based upon randomized controlled trials.⁴²² This measure would directly measure IOP after corticosteroid injections. The intent of this measure encourages clinicians to screen and treat patients identified with an elevated IOP in a timely manner. Currently there are no measures in MIPS that address the screening and plan of care for elevated IOP following intravitreal or periocular steroid therapy. This measure would also provide a clinically relevant measure option for retinal specialists.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. Current clinical guidelines do not address the need to assess for elevated IOP following corticosteroid injection; however, data has demonstrated that patients treated with corticosteroid therapy are at increased risk for elevated IOP leading to steroid induced glaucoma, visual impairment, and overall poor quality of life.^{423 424} Several randomized clinical trials and a systematic review identified that IOPs typically peak around 7 to 9 weeks.^{26 425 426}</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.9. Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks
Measure Steward:	American Society of Retina Specialists
Numerator:	Patients who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.
Denominator:	Patients with a diagnosis of acute PVD in either eye and eligible encounter during measurement period.
Exclusions:	Patients with a post-operative encounter of the eye with the acute PVD within 2 weeks before the initial encounter or 8 weeks after initial acute PVD encounter. Patients with a diagnosis of acute vitreous hemorrhage.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this process measure because it addresses the appropriate screening and follow-up for patients with PVD. PVD puts patients at an increased risk of retinal tears.⁴²⁷ PVD complicated by retinal tear may result in retinal detachment or epiretinal membrane, causing loss of vision.³¹ When retinal tears are treated promptly, the risk of detachment decreases driving positive health outcomes. While the onset of PVD is generally not preventable, it is critical to identify and treat any associated retinal tears through a prompt and appropriate initial exam and re-evaluation.³² Prompt identification of complications will allow for expedient treatment, minimizing the potential for further complications such as retinal detachment improving a patient’s quality of life.³²</p> <p>Currently there are no measures in MIPS that address care improvement for patients at risk of retinal tearing due to PVD. This measure is intended to assess compliance with the current guidelines published by the American Academy of Ophthalmology on PVD and retinal breaks, which calls for re-evaluation of patients within eight weeks of their diagnosis of PVD.⁴²⁸ Such re-evaluations are associated with prompt identification of complications which will allow for expedient onset of treatment, minimizing the potential for further complications, such as retinal detachment improving a patient’s quality of life.³² This measure would also provide a clinically relevant measure option for retinal specialists.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE, with a specific review of the validity of the measure specifications and performance gap of the measure. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As stated above, PVD is not preventable; however, with prompt evaluations, and expedited treatment, these complications may be lessened, supporting the need for this measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.10. Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks
Measure Steward:	American Society of Retina Specialists
Numerator:	Patients who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks
Denominator:	Patients with a diagnosis of acute PVD and acute vitreous hemorrhage in either eye and eligible encounter during performance period.
Exclusions:	Patients with a post-operative encounter of the eye with the acute PVD within 2 weeks before the initial encounter or 2 weeks after initial acute PVD encounter.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it addresses appropriate screening and follow-up for patients with PVD and acute vitreous hemorrhage, due to the increased risk for complications such as retinal tears and subsequent retinal detachment in this population. This measure would address the MIPS priority area of patient safety by incentivizing physicians to see patients in a timely manner. It was found that two-thirds of PVD patients presenting with associated vitreous hemorrhage, had at least one retinal break and therefore, require a more expedient follow-up evaluation. This measure would also provide a clinically relevant measure option for retinal specialists.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based.</p> <p>When retinal tears are treated promptly, the risk of detachment decreases driving positive health outcomes. While the onset of PVD is generally not preventable, it is critical to identify and treat any associated retinal tears through a prompt and appropriate evaluation. Prompt identification of complications will allow for expedient onset of treatment, minimizing the potential for further complications such as retinal detachment improving a patient’s quality of life. The current guideline published by the American Academy of Ophthalmology on posterior vitreous detachment (PVD) and retinal breaks supports this measure. The guideline states, “selected patients, particularly those with any degree of vitreous pigment, vitreous or retinal hemorrhage, or visible vitreoretinal traction, should be asked to return for a second examination promptly if they have new symptoms or within 6 weeks following the onset of PVD symptoms.”³²</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.11. Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The percentage of patients aged 18 and older with a mental and/or substance use disorder who demonstrated improvement or maintenance of functioning based on results from the 12-item World Health Organization Disability Assessment Schedule (WHODAS 2.0) or Sheehan Disability Scale (SDS) 30 to 180 days after an index assessment.
Measure Steward:	American Psychiatric Association
Numerator:	Patients who demonstrated improvement or maintenance of functioning, as demonstrated by results of follow-up assessment using the 12-item WHODAS 2.0 or Sheehan Disability Scale 30 to 180 days after the index assessment during the performance period.
Denominator:	Patients aged 18 and older with a mental and/or substance use disorder and an encounter with an index assessment completed using the 12-item WHODAS 2.0 or Sheehan Disability Scale (SDS) during the denominator identification period.
Exclusions:	Patient situations, at any point during the denominator identification period, where the patient's functional capacity or motivation (or lack thereof) to improve may impact the accuracy of results of validated tools, such as delirium, dementia, intellectual disabilities, and pervasive and specific development disorders, - Patients who died during the performance period.
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it would address a high priority specialty area and a high priority clinical topic, mental health and substance use disorders and is not duplicative of any existing measure within MIPS. The mental and substance use disorders captured by this measure are among the 25 leading causes of years lived with disabilities as well as contributing significantly to the global burden of disease.⁴²⁹ Twenty-two percent of U.S. adults (57.8 million individuals aged 18 and older) have a mental illness diagnosis and 17.3 percent (44 million individuals aged 18 and older) have a substance use disorder diagnosis (https://www.samhsa.gov/data/release/2021-national-survey-drug-use-and-health-nsduh-releases#annual-national-report). Individuals with mental disorders are more likely to report severe impairment in functioning when compared to patients with chronic medical conditions.⁴³⁰ Improvement or maintaining functioning is strongly predictive of a positive outcome.³⁴ Patients afflicted with mental disorders show increased rates of morbidity from general medical conditions in addition to a higher risk of premature mortality.³⁴ Considering these factors and the contribution of mental health disorders to the global burden of disease, gaps persist in healthcare. This necessitates improvement in the overall quality of mental health care.^{34 431}</p> <p>Outcome measures are critical to evaluating patient improvements based on current patient care, assisting clinicians in planning, monitoring, and adjusting care plans and treatment options.⁴³² This measure is comprehensive and broadly inclusive of mental health and substance use disorders. It uses a measurement-based care framework for implementation across various settings and populations to assess the outcome of care for patients with mental health and substance use disorders.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. A measure focused on functioning is linked to a decrease in negative symptoms and a reduction in resources utilized, making it have the potential to reduce economic burden. Using a screening tool will allow clinicians to better assess patient functioning over time and adjustment treatment accordingly. Measurement-based care with the use of a valid and reliable tool provides valuable information about functioning.³⁵</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.12. Gains in Patient Activation Measure (PAM®) Scores at 12 Months

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The Patient Activation Measure® (PAM®) is a 10 or 13 item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.
Measure Steward:	Insignia Health, LLC, a wholly owned subsidiary of Phreesia
Numerator:	Numerator 1: Patients with a Baseline PAM® score and then a second score taken within 12 months of the baseline (but not less than 6 months). Numerator 2: Percentage of eligible patients who achieved a net increase in PAM® score of at least 3 points in a 6 to 12 month period (passing). Numerator 3: Percentage of eligible patients who achieved a net increase in PAM® score of at least 6 points in a 6 to 12 month period (excellent). Numerator 4: The average change (net difference) for all eligible patients between the baseline PAM® score and the second score taken within 12 months of the baseline (but not less than 6 months).
Denominator:	Denominator 1: Patients aged 14 and older with a qualifying visit at least once during the performance period. Denominator 2, 3 and 4: Patients aged 14 years and older with Performance Met for Submission Criteria 1 who had a baseline PAM® score and a second score within 6 to 12 month of baseline PAM® score and who were seen for a qualifying visit at least once during the performance period.
Exclusions:	Denominator 1, 2, 3: Diagnosis of Dementia; Diagnosis of Huntington’s disease; Diagnosis of Cognitive Impairment or Alzheimer’s disease Denominator 4: None
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	1.Clinicians must have collected a follow-up PAM® survey on at least 50 percent of all eligible patients during the performance period 2.Clinicians must have administered a follow-up PAM® survey to a minimum of 40 unique patients
Rationale:	We are proposing this measure because this measure, while disease agnostic, addresses chronic conditions and patient reported outcomes, both of which are high priority areas for measure consideration for MIPS. This PRO-PM provides a standardized method for clinicians to assess patient activation through the continuum of care. The PAM® survey ⁴³³ collects information directly from patients regarding their knowledge, skill, and confidence in managing their health and healthcare. This measure has been used with a wide variety of chronic conditions, as well as with people with no medical diagnosis. The intent of the PAM® is to assess an individual’s ability to manage their own health and health care. According to the measure developer, the PAM® is predictive of most health outcomes, including such diverse outcomes as how a patient fares after orthopedic surgery; remission of depression over time; the likelihood of hospital re-admission or ambulatory care sensitive (ACS) utilization; the trajectory of a chronic disease over time; and even the likelihood of a new chronic disease diagnosis in the coming year. ^{434 435 436 437} The PAM® surveys the knowledge, skill, and confidence necessary for self-management on a 0-100 point scale that can be broken down into four levels from low activation to high activation. The 13 (or 10) item survey has strong measurement properties and is predictive of most health behaviors and many clinical outcomes. ⁴³⁸ PAM® scores are also predictive of health care costs, with lower scores predictive of higher costs. ³⁷ The PAM® is in use both in the U.S. and internationally in research as well as clinical settings and has been translated into

⁴³³ PAM Survey: https://www.phreesia.com/patient-activation-measure/?utm_source=google&utm_medium=paid_search&utm_destinationmedium=mql_form&utm_campaign=payer_care_management_paid_search&utm_vendor=phreesia&utm_audience1=payer&utm_content=648172611574&utm_destinationco

Category	Description
	<p>more than 30 languages.³⁷ The measure developer has been able to validate the instrument with people of different racial and ethnic backgrounds, and with people from different socio-economic levels, owing to the widespread utilization of PAM® by researchers all over the world.^{37 42} A version of this measure, as well as the PAM® survey, is used in a number of Federal quality and payment programs.³⁷ Additionally, it is currently a required assessment in the CMMI Kidney Care Choices (KCC) (https://innovation.cms.gov/innovation-models/kidney-care-choices-kcc-model) and Maternal Opioid Misuse (https://innovation.cms.gov/innovation-models/maternal-opioid-misuse-model) alternative payment models.</p> <p>This measure received support for rulemaking from the MAP. The MAP discussed concerns regarding the potential proprietary nature of the assessment, costs to integrate the measure into EHRs, and the licensing for integration into EHRs. The measure developer clarified the measure would be available without licensing costs for implementation. MAP also raised concerns regarding the specificity of the denominator definition/population. However, this measure is currently implemented in other Federal quality and payment programs. The measure is also aligned with the CBE endorsed measure CBE 2483: Gains in Patient Activation (PAM®) Scores at 12 Months, which is applicable to the “Group/Practice” level of analysis. Overall, the MAP agreed this measure contributes to patient-centered care and supported the measure as a PRO-PM.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

A.13. Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician’s evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.
Measure Steward:	American Psychiatric Association
Numerator:	Numerator 1: Patients for whom a completed suicide safety plan is initiated, reviewed, or updated in collaboration between the patient and their clinician at the time the suicidal ideation behavior or risk is identified (concurrent or within 24 hours of index clinical encounter), during the measurement period. Numerator 2: Patients for whom a suicide safety plan is initiated, reviewed, or updated in collaboration between the individual and their clinician at the time the suicidal ideation, behavior or risk is identified (concurrent or within 24 hours of clinical encounter) AND reviewed and updated within 120 days after the index clinical encounter after initiation.
Denominator:	Denominator 1 and 2: Patients aged 18 and older with a mental and/or substance use disorder with suicidal ideation and/or behavior symptoms or suicide risk at a clinical encounter during the denominator identification period.
Exclusions:	Denominator 1 and 2: Patients whose functional capacity or motivation (or lack thereof) to improve may impact the accuracy of results of validated tools such as delirium, dementia, intellectual disabilities, and pervasive and specific development disorders. Patients who died during the measurement period.
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this measure because it focuses on a process where initiating and reviewing a suicide safety plan with a patient at risk of suicide is a proxy for the clinical outcome of a reduction in suicides, suicide attempts, and suicidal ideation; thereby, addressing behavioral health. Incorporating this measure into MIPS would encourage measure adoption, which would support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder. This measure represents a high priority area for MIPS due to its focus on improved outcomes in mental health.</p> <p>The use of standardized patient-reported outcome measures (PROMs) associated with suicide ideation and behavior and clinician-rated assessments of suicide risk, including the use of safety plans, varies within and across behavioral health specialties as well as primary care and emergency care settings, where suicidal persons often present for care. Currently, only hard-copy versions of safety planning documents have been used in most settings, with slow uptake of electronic versions.⁴³⁹ Hard-copy safety plans provided to patients are prone to misplacement, creating a barrier to their use and follow-up.⁴³⁹ Even with use of suicide safety plans at an index visit, research has found that less than 50 percent of suicidal persons had explicit evidence of ongoing review or utilization of the safety plan in ongoing treatments.⁴⁴⁰ The implementation of this proposed quality measure is intended to incentivize quality care that addresses the low rate of (re)assessment and poor outcomes. This quality measure would help to advance the Zero Suicide initiative set forth in the National Strategy for Suicide Prevention (https://theactionalliance.org/our-strategy/national-strategy-suicide-prevention) and ultimately improve the quality of care for patients with suicide ideation, behaviors, or suicide risk.</p> <p>There is one existing measure in MIPS that addresses suicide: measure Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment. Though conceptually related, the proposed measure distinguishes itself from measure Q107 by focusing on a care process that is directly designed to mitigate suicide risk, as opposed to merely screening for it. There is an outcome measure in MIPS focused on a related mental health area: measure Q370: Depression Remission at Twelve Months. While PHQ-9, the assessment used in measure Q370⁴⁴¹, does include one question about self-harm, this measure is specific to depression. The proposed measure would include patients with other behavioral health conditions who are at risk of suicide and appropriate for assessment of the clinical quality action within the measure.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This suicide prevention measure could be clinically useful for clinicians treating individuals at increased risk for suicide as it is associated with reduction in suicidal behaviors and may improve quality of care for at risk patients.</p>

A.14. Reduction in Suicidal Ideation or Behavior Symptoms

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	TBD
Description:	The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit', within 120 days after an index assessment.
Measure Steward:	American Psychiatric Association
Numerator:	Patients who demonstrated a reduction in suicidal ideation and/or behavior symptoms as demonstrated by results of a follow-up assessment using the C-SSRS within 120 days after the index assessment during the measurement period.
Denominator:	Patients aged 18 and older with a mental and/or substance use disorder with suicidal ideation and/or behavior symptoms OR deemed a suicide risk based on their clinician's evaluation at an encounter with an index assessment completed using the C-SSRS during the denominator identification period.
Exclusions:	Patients whose functional capacity or motivation (or lack thereof) to improve may impact the accuracy of results of validated tools such as delirium, dementia, intellectual disabilities, and pervasive and specific development disorders. Patients who died during the measurement period
Measure Type:	Patient-Reported Outcome-based Performance Measure (PRO-PM)
High Priority Measure:	Yes
Collection Type:	MIPS QCMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We are proposing this PRO-PM because this measure focuses on mental health and substance use disorder (SUD), which are CMS high priority areas for MIPS measure consideration. This measure collects information related to a demonstrated reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' (https://www.cms.gov/files/document/cssrs-screen-version-instrument.pdf) versus 'Since Last Visit', taken within 120 days after an index assessment. Incorporating this measure into MIPS would encourage and support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder. This measure would represent another valuable PRO-PM measure for interested parties to report within MIPS, representing the continuum of care and improved health outcomes for individuals with suicidal ideation, behavior, or risk.</p> <p>This clinical outcome measure assesses reductions in suicidal ideation that are likely associated with reductions in suicides and suicide attempts. Suicide is a preventable cause of lost lives, yet each year over 40,000 Americans die by suicide (https://www.cdc.gov/nchs/products/databriefs/db330.htm). Safety planning, means reduction, and connecting suicidal persons to treatment are effective and critical elements in suicide prevention (https://theactionalliance.org/sites/default/files/action_alliance_recommended_standard_care_final.pdf), as discussed in the most updated clinical practice guidelines for assessment and treatment of suicidal persons (https://www.healthquality.va.gov/guidelines/MH/srb/VADoDSuicideRiskFullCPGFinal5088212019.pdf).</p> <p>This measure, which focuses on the reduction of suicidal ideation, conceptually addresses behavioral health, and is a high priority area for MIPS. There is one existing measure in MIPS that addresses suicide: measure Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment. Though conceptually related, this measure distinguishes itself by focusing on the relevant clinical outcome. There is an outcome measure in MIPS focused on a related mental health area: measure Q370: Depression Remission at Twelve Months. The instrument used to assess remission in measure Q370, the PHQ-9, does include one question about self-harm; however, this measure is specific to depression. This proposed measure would include patients with other behavioral health conditions who are at risk of suicide and appropriate for assessment of the clinical quality action within the measure.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree with the MAP that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.</p>

Table Group B: Modifications to Previously Finalized Specialty Measures Sets Proposed for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

We are proposing to modify the below previously finalized specialty measures sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D of this Appendix. In the first column, existing measures with substantive changes described in Table Group D of this Appendix are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE # / eCQM CBE #.

Under § 414.1305, a high priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure. Further details of these types of measures are located in the CMS Measures Management System Hub (mmshub.cms.gov).

It should be noted that for the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface as a collection type is only available for APM Entities, specifically Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting through the APM Performance Pathway (APP) (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS). Thus, the CMS Web Interface collection type is not listed in any specialty set under Table Group B of this Appendix. For further information regarding the Shared Savings Program requirements under the APP and the CMS Web Interface collection type available under the APP, see section III.G.2.c.(2) of this proposed rule. For information regarding proposed changes to the CMS Web Interface measures available for the CY 2024 performance period/2026 MIPS payment year, see Table Group E of this Appendix.

Note: The following specialty sets have no addition tables, no removal tables, and no substantive changes proposed for the CY 2024 performance period/2026 MIPS payment year: Anesthesiology, Electrophysiology Cardiac Specialist, and Pathology.

Note: Previously finalized measures that have no substantive changes are not open for comment under this proposed rule. We seek comment on proposed additions and proposed removals under applicable specialty sets in Table Group B of this Appendix.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Allergy/Immunology specialty set.

Indicator	CBE # / eCQM CBE #	Quality #	MS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Allergy/Immunology specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of drivers of health (DOH) data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome - Based Performance Measure	Gains in Patient Activation Measure (PAM®) Scores at 12 Months : The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure							Insignia Health, LLC, a wholly owned subsidiary of Phreesia We propose to include this measure in the Allergy/Immunology specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It's utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

National Committee for Quality Assurance							This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set and this specialty set has no proposed changes.

B.6. Chiropractic Medicine

MEASURES PROPOSED FOR ADDITION TO THE CHIROPRACTIC MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Chiropractic Medicine specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.7. Clinical Social Work

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Clinical Social Work specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Clinical Social Work specialty set.

B.7. Clinical Social Work

! (Opioid)	N/A / N/A	305	CM S13 7v1 2	eCQM Specifications	Process	<p>Initiation and Engagement of Substance Use Disorder Treatment: Percentage of patients 13 years of age and older with a new substance use disorder (SUD) episode who received the following (Two rates are reported):</p> <p>a. Percentage of patients who initiated treatment, including either an intervention or medication for the treatment of SUD, within 14 days of the new SUD episode.</p> <p>b. Percentage of patients who engaged in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication for the treatment of SUD, within 34 days of the initiation.</p>	National Committee for Quality Assurance	<p>We propose to include this measure in the Clinical Social Work specialty set as it would be clinically relevant to this clinician type. We agree with interested parties' feedback that this measure would be beneficial for clinical social workers to address the complex psychosocial challenges that accompany those with substance use disorders. Behavioral health clinicians, such as clinical social workers, are instrumental in ensuring that services address the needs of these individuals. The measure being added to this specialty set would be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.</p>

B.7. Clinical Social Work

MEASURES PROPOSED FOR ADDITION TO THE CLINICAL SOCIAL WORK SPECIALTY SET														
Indicator				CBE # / eCQM CBE #				Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
!	N/A	TBD	N/A	MIPS CQMs Specifications	Process	Connection to Community Service Provider : Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN							We propose to include this measure in the Clinical Social Work specialty set. We agree with interested parties' feedback that this measure would be clinically relevant to this clinician type as this profession has historically addressed social needs through screening and evaluation, providing referrals, and connecting patients to community services and falls within their scope of care. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

	! (Outcome)	N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Reduction in Suicidal Ideation or Behavior Symptoms: The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit', within 120 days after an index assessment.	American Psychiatric Association	We propose to include this measure in the Clinical Social Work specialty set. We agree with interested parties' feedback that this measure would be clinically relevant to this clinician type. The interested parties noted that this measure could provide meaningful data that could be used to support evidence-based treatment and promote better quality of care. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.14 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.7. Clinical Social Work

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE CLINICAL SOCIAL WORK SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management: Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.8. Dentistry

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Dentistry specialty set.

MEASURES PROPOSED FOR ADDITION TO THE DERMATOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p>Gains in Patient Activation Measure (PAM®) Scores at 12 Months: The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.</p>	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	<p>We propose to include this measure in the Dermatology specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It’s utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #					Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A					138	N/A	MIPS CQMs Specifications	Process	Melanoma: Coordination of Care: Percentage of patient visits, regardless of age, with a new occurrence of melanoma that have a treatment plan documented in the chart that was communicated to the physician(s) providing continuing care within one month of diagnosis.	American Academy of Dermatology	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.				National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.	

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Diagnostic Radiology specialty set.

B.10. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES IN THE DIAGNOSTIC RADIOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
! (Patient Safety)	N/A / N/A	145	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy: Final reports for procedures using fluoroscopy that document radiation exposure indices.	American College of Radiology
! (Appropriate Use)	N/A / N/A	360	N/A	MIPS CQMs Specifications	Process	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies: Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion studies) imaging reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion) studies that the patient has received in the 12-month period prior to the current study.	American College of Radiology
! (Appropriate Use)	N/A / N/A	364	N/A	MIPS CQMs Specifications	Process	Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines: Percentage of final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up (e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians).	American College of Radiology
! (Appropriate Use)	N/A / N/A	405	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Appropriate Follow-up Imaging for Incidental Abdominal Lesions: Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings: <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion less than or equal to 1.0 cm • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign or diagnostic benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols 	American College of Radiology

B.10. Diagnostic Radiology

B.10. Diagnostic Radiology

MEASURES PROPOSED FOR ADDITION TO THE DIAGNOSTIC RADIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion

B.10. Diagnostic Radiology

MEASURES PROPOSED FOR ADDITION TO THE DIAGNOSTIC RADIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
(Outcome) !	3633e / N/A	TBD	CM S10 56v 1	eCQM Specifications	Intermediate Outcome	<p>Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level): This measure provides a standardized method for monitoring the performance of diagnostic CT to discourage unnecessarily high radiation doses, a risk factor for cancer, while preserving image quality. It is expressed as a percentage of CT exams that are out-of-range based on having either excessive radiation dose or inadequate image quality relative to evidence-based thresholds based on the clinical Indication for the exam. All diagnostic CT exams of specified anatomic sites performed in inpatient, outpatient and ambulatory care settings are eligible. This eCQM requires the use of additional software to access primary data elements stored within radiology electronic health records and translate them into data elements that can be ingested by this eCQM. Additional details</p>	Alara Imaging, Inc. in collaboration with the University of California, San Francisco (UCSF)	We propose to include this measure in the Diagnostic Radiology specialty set as it would be clinically relevant to this clinician type. This measure would provide radiologists with a clinically relevant outcome measure within MIPS and meets the high priority definition for MIPS reporting as an outcome and patient safety measure. It aligns with numerous consensus-based clinical recommendations and guidelines and is also consistent with the CMS emphasis on expanding digital quality measures with reduction in clinician burden. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.1 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.10. Diagnostic Radiology

MEASURES PROPOSED FOR ADDITION TO THE DIAGNOSTIC RADIOLOGY SPECIALTY SET

												are included in the Guidance field.		
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN	We propose to include this measure in the Diagnostic Radiology specialty set as it's clinically screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.						

B.10. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DIAGNOSTIC RADIOLOGY SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	147	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy: Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.	Society of Nuclear Medicine and Molecular Imaging	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	436	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques: Percentage of final reports for patients aged 18 years and older undergoing computed tomography (CT) with documentation that one or more of the following dose reduction techniques were used: • Automated exposure control. • Adjustment of the mA and/or kV according to patient size. • Use of iterative reconstruction technique.	American College of Radiology/ American Medical Association/ National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.11. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Emergency Medicine specialty set.

MEASURES PROPOSED FOR ADDITION TO THE ENDOCRINOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</p> <p>The Patient Activation Measure® (PAM®) is a 10– or 13– item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.</p>	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We propose to include this measure in the Endocrinology specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It’s utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.12. Endocrinology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ENDOCRINOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #						Qu alit y #	CMS eCQ M ID	Collect ion Type	Meas ure Type	Measure Title And Description	Measur e Stewar d	Rationale for Removal
N/ A/ N/ A	128	CM S69 v12	Medica re Part B Claims Measur e Specific ations, eCQM Specific ations, MIPS CQMs Specific ations	Proc ess	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow- Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.							Centers for Medica re & Medica id Service s This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.

B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Family Medicine specialty set.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES IN THE FAMILY MEDICINE SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
* § ! (Outcome)	0059 / N/A	001	CMS122v 12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Intermediate Outcome	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%): Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.	National Committee for Quality Assurance
* §	0081 / 0081e	005	CMS135v 12	eCQM Specifications, MIPS CQMs Specifications	Process	Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepirylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD): Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.	American Heart Association
* §	0067 / N/A	006	N/A	MIPS CQMs Specifications	Process	Coronary Artery Disease (CAD): Antiplatelet Therapy: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.	American Heart Association
* §	0070 / 0070e	007	CMS145v 12	eCQM Specifications, MIPS CQMs Specifications	Process	Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%): Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤ 40% who were prescribed beta-blocker therapy.	American Heart Association
* §	0083 / 0083e	008	CMS144v 12	eCQM Specifications, MIPS CQMs Specifications	Process	Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD): Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) ≤ 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.	American Heart Association

PREVIOUSLY FINALIZED MEASURES IN THE FAMILY MEDICINE SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
	N/A / N/A	009	CMS128v 12	eCQM Specifications	Process	Anti-Depressant Medication Management: Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported. A. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks). b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).	National Committee for Quality Assurance
* ! (Care Coordination)	N/A / N/A	024	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.	National Committee for Quality Assurance
	0046 / N/A	039	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Screening for Osteoporosis for Women Aged 65-85 Years of Age: Percentage of female patients aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) to check for osteoporosis.	National Committee for Quality Assurance
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Advance Care Plan: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
*	N/A / N/A	048	N/A	MIPS CQMs Specifications	Process	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CB E # / eC Q M CB E #	Qua lity #	CMS eCQM ID	Collect ion Type	Meas ure Type	Measure Title And Description	Mea sure Ste war d	Rationale for Inclusion

!	N/A / N/A	TBD	N/A	MIPS CQMs Specifi cations	Patie nt- Repo rted Out come- Base d Perfo rman ce Meas ure	<p>Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care provider and team within 2 months (60 days) of the ambulatory palliative care visit.</p>	Ame rica n Aca dem y of Hos pice and Palli ative Med icine (AA HP M)	<p>We propose to include this measure in the Family Medicine specialty set as it would be clinically relevant to this clinician type. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models. In addition, it can facilitate and improve effective patient-provider communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.13. Family Medicine

MEASURES PROPOSED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CE # / eCQM CE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Preventive Care and Wellness (composite): Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We propose to include this measure in the Family Medicine specialty set as it would be clinically relevant to this clinician type. The addition of this quality measure to this specialty set would reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure would set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure would help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Reduction in Suicidal Ideation or Behavior Symptoms : The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) "Screen Version" or "Since Last Visit", within 120 days after an index assessment.	American Psychiatric Association								<p>We propose to include this measure in the Family Medicine specialty set as it would be clinically relevant to this clinician type. This patient reported outcome measure focuses on mental health and substance use disorder (SUD) and the reduction of suicidal ideation, conceptually addressing behavioral health which are a CMS high priority area. Incorporating this clinical outcome measure in this specialty set would encourage measure adoption which would support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and SUD. The addition of this quality measure for this specialty would reinforce our commitment that all clinicians should be actively engaging in addressing mental health and SUDs across the care continuum. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.14 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #		Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
0654 / N/A	093	N/A	MIPS CQMs Specifications	Process	<p>Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use: Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.</p>	American Academy of Otolaryngology-Head and Neck Surgery	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.	
N/A / N/A	107	CMS161v12	eCQM Specifications	Process	<p>Adult Major Depressive Disorder (MDD): Suicide Risk Assessment: Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.</p>	Mathematica	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.	

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
2372 / N/A	112	CMS 125v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Processes	Breast Cancer Screening: Percentage of women 50 – 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
0034 / N/A	113	CMS 130v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Processes	Colorectal Cancer Screening: Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Processes	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #							Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A/N/A	226	CMS138v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance							This measure is being proposed for removal from the <i>Family Medicine</i> specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is proposed to be included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set would be duplicative.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #		Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	317				Process	<p>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.</p>	Centers for Medicare & Medicaid Services	<p>This measure is being proposed for removal from the Family Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is proposed to be included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). N/A / N/A	402				Process	<p>Tobacco Use and Help with Quitting Among Adolescents : The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	<p>This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.</p>

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Gastroenterology specialty set.

! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the General Surgery specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity within all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.15. General Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE GENERAL SURGERY SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS69v1 2	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow- up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.16. Geriatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Geriatrics specialty set.

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Preventive Care and Wellness (composite): Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We propose to include this measure in the Geriatrics specialty set as it would be clinically relevant to this clinician type. The addition of this quality measure to this specialty set would reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure would set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure would help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.16. Geriatrics

MEASURES PROPOSED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! ! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care provider and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We propose to include this measure in the Internal Medicine specialty set as it would be clinically relevant to this clinician type. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models. In addition, it can facilitate and improve effective patient-provider communication that engenders trust, acknowledgment, and a whole-person orientation to the care that is provided. This is an important patient-centered measure that helps patients feel heard and understood

B.19. Internal Medicine

	! (Outcome)	N/A / N/A	TB D	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure Gains in Patient Activation Measure (PAM®) Scores at 12 Months: The Patient Activation Measure® (PAM®) is a 10- or 13- item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individual s on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We propose to include this measure in the Internal Medicine specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It's utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.19. Internal Medicine

MEASURES PROPOSED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET														
Indicator				CBE # / eCQM CBE #				Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
!	N/A	TD	N/A	MIPS CQMs Specifications	Processes	Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk: Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.								<p>American Psychiatric Association</p> <p>We propose to include this measure in the Internal Medicine specialty set as it would be clinically relevant to this clinician type. The incorporation of this measure in this specialty set would help promote interventions and best practices that are effective at symptoms reduction and improving functional status and quality of life. This measure is a high priority area for MIPS and by adding the measure to this specialty set it would encourage measure adoption which would support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder, while also reinforcing our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.13 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #		Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
0654 / N/A	093	N/A	MIPS CQMs Specifications	Process	Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use: Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology-Head and Neck Surgery	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.	
N/A / N/A		107	CMS 161v12	eCQM Specifications	Process	Adult Major Depressive Disorder (MDD): Suicide Risk Assessment: Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.	Mathematica	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	226	CMS 138v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal from the Internal Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is proposed to be included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set would be duplicative.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.	

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Interventional Radiology specialty set.

PREVIOUSLY FINALIZED MEASURES IN THE INTERVENTIONAL RADIOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
! (Patient Safety)	N/A / N/A	145	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy: Final reports for procedures using fluoroscopy that document radiation exposure indices.	American College of Radiology
! (Care Coordination)	N/A / N/A	374	CMS50 v12	eCQM Specifications, MIPS CQMs Specifications	Process	Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services
* ! (Outcome)	N/A / N/A	409	N/A	MIPS CQMs Specifications	Outcome	Clinical Outcome Post Endovascular Stroke Treatment: Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention.	Society of Interventional Radiology
! (Outcome)	N/A / N/A	413	N/A	MIPS CQMs Specifications	Intermediate Outcome	Door to Puncture Time for Endovascular Stroke Treatment: Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less.	Society of Interventional Radiology
! (Outcome)	N/A / N/A	420	N/A	MIPS CQMs Specifications	Patient- Reported Outcome- Based Performance Measure	Varicose Vein Treatment with Saphenous Ablation: Outcome Survey: Percentage of patients treated for varicose veins (CEAP C2-S) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease specific patient reported outcome survey instrument after treatment.	Society of Interventional Radiology
	N/A / N/A	421	N/A	MIPS CQMs Specifications	Process	Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal: Percentage of patients in whom a retrievable IVC filter is placed who, within 3 months post-placement, have a documented assessment for the appropriateness of continued filtration, device removal or the inability to contact the patient with at least two attempts.	Society of Interventional Radiology
! (Patient Safety)	N/A / N/A	465	N/A	MIPS CQMs Specifications	Process	Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries: The percentage of patients with documentation of angiographic endpoints of embolization AND the documentation of embolization strategies in the presence of unilateral or bilateral absent uterine arteries.	Society of Interventional Radiology
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specifications	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services

B.20. Interventional Radiology

MEASURES PROPOSED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Interventional Radiology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.21. Mental/Behavioral Health and Psychiatry

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Mental/Behavioral Health and Psychiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Mental/Behavioral Health and Psychiatry specialty set.

<p>Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	107	CMS161v12	eCQM Specifications	Process	Adult Major Depressive Disorder (MDD): Suicide Risk Assessment: Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.	Mathematica	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	128	CMS69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management: Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.21. Mental/Behavioral Health and Psychiatry

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
0576 / N/A	391	N/A	MIPS CQMs Specification s	Process	Follow-Up After Hospitalization for Mental Illness (FUH): The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge • The percentage of discharges for which the patient received follow-up within 7 days after discharge.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specification s	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nephrology specialty set.

B.22. Nephrology

PREVIOUSLY FINALIZED MEASURES IN THE NEPHROLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
* § ! (Outcome)	0059 / N/A	001	CMS122 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Intermediate Outcome	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%): Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.	National Committee for Quality Assurance
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Advance Care Plan: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
§ ! (Patient Safety)	N/A / N/A	130	CMS68v 13	eCQM Specifications, MIPS CQMs Specifications	Process	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
* § ! (Care Coordination)	N/A / N/A	182	N/A	MIPS CQMs Specifications	Process	Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	226	CMS138 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance

B.22. Nephrology

PREVIOUSLY FINALIZED MEASURES IN THE NEPHROLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
*	N/A / N/A	317	CMS22v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services
! (Patient Safety)	0101 / N/A	318	CMS139 v12	eCQM Specifications	Process	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance
* §	N/A / N/A	400	N/A	MIPS CQMs Specifications	Process	One-Time Screening for Hepatitis C Virus (HCV) for all Patients: Percentage of patients age >= 18 years who received one-time screening for Hepatitis C Virus (HCV) infection.	American Gastroenterological Association
! (Outcome)	N/A / N/A	482	N/A	MIPS CQMs Specifications	Intermediate Outcome	Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate: Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.	Centers for Medicare & Medicaid Services
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specifications	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services
	N/A / N/A	488	CMS951 v2	eCQM specifications, MIPS CQMs Specifications	Process	Kidney Health Evaluation: Percentage of patients aged 18-75 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the measurement period.	National Kidney Foundation
	1662 / N/A	489	N/A	MIPS CQMs Specifications	Process	Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy: Percentage of patients aged 18 years and older with a diagnosis of CKD (Stages 1-5, not receiving Renal Replacement Therapy (RRT)) and proteinuria who were prescribed ACE inhibitor or ARB therapy within a 12-month period.	Renal Physicians Association
*	3620 / N/A	493	N/A	MIPS CQMs Specifications	Process	Adult Immunization Status: Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>First Year Standardized Waitlist Ratio (FYSWR): The number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) group who are under the age of 75, and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The measure is calculated to compare the observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, adjusted for age, patient comorbidities, and other risk factors at incidence of dialysis.</p>	Centers for Medicare & Medicaid Services	<p>We propose to include this measure in the Nephrology specialty set as it would be clinically relevant to this clinician type. The measure's intended objective consists of improving the overall health of patients on dialysis, with Nephrologists at the forefront of caring for this patient population. Clinicians within this specialty are responsible for the education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.4 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW): The percentage of patients in each dialysis practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Results are averaged across patients prevalent on the last day of each month during the reporting year. The measure is a directly standardized percentage, which is adjusted for covariates (e.g., age and risk factors).</p>	Centers for Medicare & Medicaid Services	<p>We propose to include this measure in the Nephrology specialty set as would be clinically relevant to this clinician type. The maintenance of end stage renal disease patients on active status on the waitlist is additionally important given demonstrated disparities and positive association with subsequent transplantation. These practices are important for Nephrologists who are at the forefront of caring for this patient population. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Nephrology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.22. Nephrology

MEASURES PROPOSED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p>Gains in Patient Activation Measure (PAM®) Scores at 12 Months: The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.</p>	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We propose to include this measure in the Nephrology specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It’s utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Neurology specialty set.

MEASURES PROPOSED FOR ADDITION TO THE NEUROSURGICAL SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Neurosurgical specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.25. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nutrition/Dietician specialty set.

* §	N/A / N/A	134	CMS2v 13	Medicare Part B Claims Measure Specification s, eCQM Specification s, MIPS CQMs Specification s	Process	Preventive Care and Screening: Screening for Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Nutrition/Dietician specialty set. We agree with interested parties' feedback that depression continues to be a major public health concern and all Medicare clinicians should be doing their part to address the issue. Screening for depression is often a routine part of the comprehensive nutrition assessment performed by Registered Dietitians/Nutritionists (RDNs) as nutrition status is closely linked to mental health. Optimizing the nutrition status of an individual with mental illness has been shown to improve both cognitive and emotional functioning. The measure being added to this specialty set would be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.

B.25. Nutrition/Dietician

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Oncology/Hematology specialty set.

! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p>Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care provider and team within 2 months (60 days) of the ambulatory palliative care visit.</p>	American Academy of Hospice and Palliative Medicine (AAHPM)	<p>We propose to include this measure in the Oncology/Hematology specialty set as it would be clinically relevant to this clinician type. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.27a. Oncology/Hematology

Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Oncology/Hematology specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.27a. Oncology/Hematology

MEASURES PROPOSED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET

MEASURES PROPOSED FOR ADDITION TO THE OPHTHALMOLOGY/OPTOMETRY SPECIALTY SET								
Indicator	CB E # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Ophthalmology/Optometry specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.28. Ophthalmology/Optometry

MEASURES PROPOSED FOR ADDITION TO THE OPHTHALMOLOGY/OPTOMETRY SPECIALTY SET														
Indicator							CB E # / eCQM CB E #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy: Percentage of patients who had an intravitreal or periocular corticosteroid injection (e.g., triamcinolone, preservative-free triamcinolone, dexamethasone, dexamethasone intravitreal implant, or fluocinolone intravitreal implant) who, within seven (7) weeks following the date of injection, are screened for elevated intraocular pressure (IOP) with tonometry with documented IOP \leq25 mm Hg for injected eye OR if the IOP was $>$25 mm Hg, a plan of care was documented.</p>	American Society of Retina Specialists								<p>We propose to include this measure in the Ophthalmology and Optometry specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given the high rates that patients are assessed, treated, and managed for this condition in the Ophthalmology and Optometry care setting. This measure addresses the MIPS priority area of patient safety. This measure would help to incentivize timely initiation of the appropriate screening for these patients and ensure there is a plan of care for elevated IOP following intravitreal or periocular steroid therapy. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.8 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

See Table A.10 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.28. Ophthalmology/Optometry

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OPHTHALMOLOGY/OPTOMETRY SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
0087 / N/A	014	N/A	MIPS CQMs Specifications	Process	Age-Related Macular Degeneration (AMD): Dilated Macular Examination: Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12-month performance period.	American Academy of Ophthalmology	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.29. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Orthopedic Surgery specialty set.

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #							Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A							128	CMS 69v1 2	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.						

B.30. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Otolaryngology specialty set.

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES IN THE OTOLARYNGOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Advance Care Plan: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
* § ! (Appropriate Use)	N/A / N/A	066	CMS146 v12	eCQM Specifications, MIPS CQMs Specifications	Process	Appropriate Testing for Pharyngitis: The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order and a group A Streptococcus (Strep) test in the seven-day period from three days prior to the episode date through three days after the episode date.	National Committee for Quality Assurance
§ ! (Patient Safety)	N/A / N/A	130	CMS68v 13	eCQM Specifications, MIPS CQMs Specifications	Process	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
! (Care Coordination)	0101 / N/A	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance
* §	N/A / N/A	226	CMS138 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance
* ! (Patient Safety)	0022 / N/A	238	CMS156 v12	eCQM Specifications, MIPS CQMs Specifications	Process	Use of High-Risk Medications in Older Adults: Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.	National Committee for Quality Assurance
	N/A / N/A	277	N/A	MIPS CQMs Specifications	Process	Sleep Apnea: Severity Assessment at Initial Diagnosis: Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.	American Academy of Sleep Medicine
*	N/A / N/A	279	N/A	MIPS CQMs Specifications	Process	Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured.	American Academy of Sleep Medicine

MEASURES PROPOSED FOR ADDITION TO THE OTOLARYNGOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Otolaryngology specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OTOLARYNGOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
0654 / N/A	093	N/A	MIPS CQMs Specifications	Process	Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use: Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology-Head and Neck Surgery	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OTOLARYNGOLOGY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #							Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance							This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.31. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set and this specialty set has no proposed changes.

B.31. Pathology

PREVIOUSLY FINALIZED MEASURES IN THE PATHOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
	N/A / N/A	249	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Barrett's Esophagus: Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia.	College of American Pathologists
§	N/A / N/A	250	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Radical Prostatectomy Pathology Reporting: Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status.	College of American Pathologists
! (Care Coordination)	N/A / N/A	395	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Lung Cancer Reporting (Biopsy/Cytology Specimens): Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.	College of American Pathologists
! (Care Coordination)	N/A / N/A	396	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Lung Cancer Reporting (Resection Specimens): Pathology reports based on lung resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.	College of American Pathologists
! (Care Coordination)	N/A / N/A	397	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Melanoma Reporting: Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors.	College of American Pathologists
! (Care Coordination)	N/A / N/A	440	N/A	MIPS CQMs Specifications	Process	Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician: Percentage of biopsies with a diagnosis of cutaneous basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.	American Academy of Dermatology
! (Care Coordination)	3661 / N/A	491	N/A	MIPS CQMs Specifications	Process	Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status in Colorectal Carcinoma, Endometrial, Gastroesophageal, or Small Bowel Carcinoma: Percentage of surgical pathology reports for primary colorectal, endometrial, gastroesophageal or small bowel carcinoma, biopsy or resection, that contain impression or conclusion of or recommendation for testing of mismatch repair (MMR) by immunohistochemistry (biomarkers MLH1, MSH2, MSH6, and PMS2), or microsatellite instability (MSI) by DNA-based testing status, or both	College of American Pathologists

B.32. Pediatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pediatrics specialty set.

See Table Group C of this Appendix for rationale.

B.32. Pediatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PEDIATRICS SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #						Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal	
N/A/N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.							National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.33. Physical Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Medicine specialty set.

B.33. Physical Medicine

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL MEDICINE SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Advance Care Plan: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
§ ! (Patient Safety)	N/A / N/A	130	CMS68 v13	eCQM Specifications, MIPS CQMs Specifications	Process	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
! (Care Coordination)	0101 / N/A	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance
* § ! (Care Coordination)	N/A / N/A	182	N/A	MIPS CQMs Specifications	Process	Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	226	CMS13 8v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance

Centers for Medicare & Medicaid Services
! (Care Coordination)	N/A / N/A	374	CMS50 v12	eCQM Specifications, MIPS CQMs Specifications	Process	Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services
* §	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance
! (Opioid)	N/A / N/A	468	N/A	MIPS CQMs Specifications	Process	Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.	University of Southern California
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specifications	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services

B.33. Physical Medicine

MEASURES PROPOSED FOR ADDITION TO THE PHYSICAL MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Physical Medicine specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.33. Physical Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PHYSICAL MEDICINE SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS69 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow- up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.34. Physical Therapy/Occupational Therapy

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Therapy/Occupational Therapy specialty set.

*	N/A / N/A	291	N/A	MIPS CQMs Specifications	Process	<p>Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson’s Disease: Percentage of all patients with a diagnosis of Parkinson’s Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.</p>	American Academy of Neurology	<p>We propose to include this measure in the Physical Therapy/Occupational Therapy specialty set. We agree with interested parties’ feedback that this measure would be clinically relevant to this clinician type. Occupational therapy services enable clients to participate in their everyday life occupations in their desired roles, contexts, and life situations through evaluation and treatment related to basic activities of daily living and instrumental activities of daily living. Occupational therapy practitioners use their knowledge and skills to help clients conduct or resume daily life occupations that support function and health throughout the lifespan, including patients with dementia and their caregivers. The addition of this quality measure in this specialty set would make room for more clinician choice by making more measures available that are reflective of the services delivered to this patient population. The measure being added to this specialty set would be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.</p>

Indicator		CBE # / eCQM CBE #						Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
!	N/A / N/A	TB D	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Gains in Patient Activation Measure (PAM®) Scores at 12 Months: The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia						<p>We propose to include this measure in the Physical Therapy/ Occupational Therapy specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It's utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>	

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET							
<p>Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS QMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	178	N/A	MIPS QMs Specifications	Process	Rheumatoid Arthritis (RA): Functional Status Assessment: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.	American College of Rheumatology	This measure is being proposed for removal from the Physical Therapy/Occupational Therapy specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. PT/OT applicable coding has not been added to this measure, so we are proposing to remove this measure from this specialty set.
N/A / N/A	283	N/A	MIPS QMs Specifications	Process	Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management: Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.35. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Plastic Surgery specialty set.

! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Plastic Surgery specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.35. Plastic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PLASTIC SURGERY SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS69 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.

B.36. Podiatry

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Podiatry specialty set.

MEASURES PROPOSED FOR ADDITION TO THE PODIATRY SPECIALTY SET								
Indicator	CB E # / eC QM CB E #	Quality #	CMS eCQM ID	Collecti on Type	Measure Type	Measure Title And Description	Measu re Stewar d	Rationale for Inclusion
! Outcome	N/A / N/A	219	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p>Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments:</p> <p>A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with foot, ankle or lower leg impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.</p>	Focus on Therapeutic Outcomes, Inc.	We propose to include this measure in the Podiatry specialty set as it would be clinically relevant to this clinician type. The addition of this measure would provide this specialty the opportunity to report on an important PROM that would align with their scope of care consisting of the treatment of the lower extremity. Functional deficits are common in the general population and are costly to the individual, their family and society, and improving functional status has been associated with greater quality of life, self-efficacy, improved financial well-being and lower future medical costs (https://fotoinc.com/science-of-foto/nqf-measure-specifications/). Predictive modeling allows for patient-level predictions to help guide treatment decision making and expectations for recovery.

Cent ers for Medic are & Medic aid Servic es							We propose to include this measure in the Podiatry specialty set. The addition of this measure to this specialty set would help to broaden the patient population being screened for high blood pressure. There is known risk of adverse effects on the circulatory system due to high blood pressure making this an important aspect of care for podiatrists. Hypertension is often related to atherosclerosis and this buildup of plaque in blood vessels can lead to decreased circulation and peripheral arterial disease (PAD) (https://www.apma.org/hypertension). Patients with decreased circulation in their lower extremities may develop ulcerations that can lead to amputations. Given the close correlation of hypertension and decreased circulation in lower extremities, interdisciplinary care is vital and should be the responsibility of all clinician types. The addition of this measure to the Podiatry specialty set would help to encourage the comprehensive evaluation of compliance of screening for and proper treatment of high blood pressure that can improve quality care and prevent disease for the general population.

Ameri can Colle ge of Surge ons	We propose to include this measure in the Podiatry specialty set as it would be clinically relevant to this clinician type. Patients undergoing podiatric surgery should receive a thorough perioperative evaluation. Medical "clearance" is no longer sufficient; rather, formal risk assessment should be performed, and risk-reducing strategies communicated. A collaborative, multidisciplinary approach is generally most appropriate, however, expertise and training in this critical dimension of clinical practice varies. Thus, podiatrists should develop independent competence in perioperative evaluation to ensure optimal care for their patients. In preparation for elective foot and ankle surgery, the podiatric surgeon often will refer the patient for a preoperative evaluation. Surgeons rely on the input of that consultant to provide a determination as to the operative risk for the patient https://pubmed.n

It’s utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.37. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
2372 / N/A	112	CMS125v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Breast Cancer Screening: Percentage of women 50 – 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
0034 / N/A	113	CMS130v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Colorectal Cancer Screening: Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.	National Committee for Quality Assurance	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
N/A / N/A	128	CMS69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.

B.37. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #							Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	226	CMS138v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention : Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance							This measure is being proposed for removal from the <i>Preventive Medicine</i> specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is proposed to be included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set would be duplicative.
N/A / N/A							317	CMS22v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from the Preventive Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year.

B.37. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.38. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pulmonology specialty set.

MEASURES PROPOSED FOR ADDITION TO THE SKILLED NURSING FACILITY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Process	<p>Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We propose to include this measure in the Skilled Nursing Facility specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure would allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.41. Speech Language Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Speech Language Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Speech Language Pathology specialty set.

MEASURES PROPOSED FOR ADDITION TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	291	N/A	MIPS QCMs Specifications	Process	<p>Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson’s Disease: Percentage of all patients with a diagnosis of Parkinson’s Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.</p>	American Academy of Neurology	<p>We propose to include this measure in the Speech Language Pathology specialty set. We agree with interested parties’ feedback that SLPs are keenly interested in a measure set that includes quality measures that are more reflective of the types of clinical conditions they treat. While the diagnosis of Parkinson’s disease is made by a medical team, SLPs are trained to assess cognitive-communication deficits related to this condition, and to identify cultural, linguistic, and environmental influences that have an impact on functioning. The services provided by SLPs contribute to improving the safety and well-being of the individual. Therefore, it would be important to consider SLPs as an integral member of the clinical care team working with patients diagnosed with Parkinson’s and include this measure in the speech-language pathology specialty measure set. The addition of this quality measure in this specialty set would make room for more clinician choice by making more measures available that are reflective of the services delivered to this patient population. The measure being added to this specialty set would be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.</p>

B.41. Speech Language Pathology

MEASURES PROPOSED FOR ADDITION TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specificatio ns	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Speech Language Pathology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. We agree with interested parties' feedback that SLPs are committed to addressing health equity and play a key role in screening individuals for social risks. When factors are identified, SLPs consider them when establishing a care plan and modifications are made to create achievable, sustainable, and functional goals that are patient-centered. In response to the interested parties' feedback, we are proposing to add this measure to this specialty set if all proposed measures for the specialty set are finalized. This is a screening data collection measure and is voluntary; therefore, clinicians have the flexibility to choose to report this measure and it only looks at the screening of patients. Currently, if all proposed measures for this specialty set are finalized, the SLP specialty set would contain 11 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care. Under MIPS, clinicians have the flexibility to choose to report the measures that would work best for their scope of practice and clinical workflow. The measure being added to this specialty set would be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.

! (Outcome)	N/A / N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p>Gains in Patient Activation Measure (PAM®) Scores at 12 Months: The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.</p>	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We propose to include this measure in the Urology specialty set as it would be clinically relevant to this clinician type. The addition of this measure to this specialty set would be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It’s utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

B.44. Urology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE UROLOGY SPECIALTY SET							
Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS69 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.

B.45. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this proposed rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Vascular Surgery specialty set.

B.45. Vascular Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE VASCULAR SURGERY SPECIALTY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #							Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A							128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Processes	<p>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.</p>	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the proposed Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore proposed for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<p>Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.						

Table Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

In this proposed rule, we propose to remove 12 previously finalized MIPS quality measures from MIPS for the CY 2024 performance period/2026 MIPS payment year and future years. These measures are discussed in detail below. The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discusses our incremental approach to removing process measures.

Under our measure removal criteria, consideration is given to the following, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan at <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development>.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- If they do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.
- After factoring in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcomes; consideration of the measure in developing MVPs).
- If we determine the measure is not available for MIPS reporting by or on behalf of all MIPS eligible clinicians.

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion that we use for the removal of measures includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent.

For a measure that is proposed for removal due to criteria relating to the benchmark and performance data, further information regarding MIPS benchmarking data can be located at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip>.

C.1. Age-Related Macular Degeneration (AMD): Dilated Macular Examination

Category	Description
CBE # / eCQM CBE #:	0087 / N/A
Quality #:	014
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12 month performance period.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.2. Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use

Category	Description
CBE # / eCQM CBE #:	0654 / N/A
Quality #:	093
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.3. Adult Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	107
CMS eCQM ID:	CMS161v12
Collection Type:	eCQM Specifications
Measure Description:	Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.
Measure Steward:	Mathematica
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to the Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk measure being proposed in Table A.13 of this Appendix. Measure Q107 is specific to major depressive disorder whereas the new measure would include patients with other behavioral health conditions who are at risk of suicide. Furthermore, the proposed new measure represents a high priority area for MIPS: mental health. It focuses on a care process that is directly designed to mitigate suicide risk, as opposed to just completing the screening. Studies have shown that clinical interventions aimed at suicide prevention, such as initiating and reviewing a suicide safety plan with a patient at risk of suicide, is a proxy for the clinical outcome of a reduction in suicides, suicide attempts, and suicidal ideation (https://pubmed.ncbi.nlm.nih.gov/29998307/).</p>
In the Circumstance the Measure is Retained	<p>If the measure is not finalized for removal in the CY 2024 PFS final rule, we propose to apply the following substantive change to the measure specifications: 1) the measure description, initial patient population and guidance would be updated so that the age description in the narrative matches the Clinical Quality Language (CQL) logic of capturing patients who are 17 years and older. This proposal ensures the measure is implemented as specified, and the correct patient population is being captured.</p> <p>If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. The substantive changes outlined above would be applied to the measure specifications.</p>

C.4. Preventive Care and Screening: Influenza Immunization

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	110
CMS eCQM ID:	CMS147v13
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to a more robust measure Q493: Adult Immunization Status. This measure's clinical concept is included in the Adult Immunization Status measure. Measure Q110 only focuses on the administration of the influenza immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Furthermore, the measure is currently only available for use within MVPs; however, based upon interested party feedback, measure Q493 is being proposed as a replacement for those MVPs that contain measure Q110. This measure would remain for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP.
In the Circumstance the Measure is Retained	<p>If the measure is not finalized for removal in the CY 2024 PFS final rule, we propose to apply the following substantive change to the measure specifications: 1) denominator exclusion for all collection types would be updated to include anaphylaxis due to the vaccine as there is new coding available to capture this data. It is clinically appropriate and prudent to refrain from administering the vaccine to patients who experienced anaphylaxis with a previous vaccine administration.</p> <p>If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. The substantive changes outlined above would be applied to the measure specifications.</p>

C.5. Pneumococcal Vaccination Status for Older Adults

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	111
CMS eCQM ID:	CMS127v12
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients 66 years of age and older who have received a pneumococcal vaccine.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to a more robust measure Q493: Adult Immunization Status. This measure’s clinical concept is included in the Adult Immunization Status measure. Measure Q111 only focuses on the administration of the pneumococcal immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Furthermore, the measure is currently only available for use within MVPs; however, based upon interested party feedback, measure Q493 is being proposed as a replacement for those MVPs that contain measure Q111.</p>
In the Circumstance the Measure is Retained	<p>If the measure is not finalized for removal in the CY 2024 PFS final rule, we propose to apply the following substantive changes to the measure specifications: 1) for the eCQM Specifications collection type, the denominator exclusion would be updated to include anaphylaxis any time before the end of the measurement period due to new coding availability to capture this data; 2) for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types, the denominator exclusions for active chemotherapy, bone marrow transplant and history of immunocompromising conditions would be removed; and 3) for all collection types, the initial patient population would be changed from 66 years of age and older to 65 years of age and older while the numerator criteria lookback period would be extended to the 19th birthday for pneumococcal vaccination. These updates would lend to better alignment with the most recent ACIP guidelines (https://www.cdc.gov/vaccines/vpd/pneumo/hcp/recommendations.html).</p> <p>If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. The substantive changes outlined above would be applied to the measure specifications.</p>

C.6. Melanoma: Coordination of Care

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	138
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patient visits, regardless of age, with a new occurrence of melanoma that have a treatment plan documented in the chart that was communicated to the physician(s) providing continuing care within one month of diagnosis.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.7. Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	147
CMS eCQM ID:	N/A
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.
Measure Steward:	Society of Nuclear Medicine and Molecular Imaging
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.8. Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	283
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.
Measure Steward:	American Academy of Neurology/American Psychiatric Association
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.9. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Testing in Asymptomatic, Low-Risk Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	324
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of all stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), and cardiovascular magnetic resonance (CMR) performed in asymptomatic, low coronary heart disease (CHD) risk patients 18 years and older for initial detection and risk assessment.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the quality action being measured is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 0.81 percent for the MIPS CQMs Specifications collection type. As such, the MIPS CQMs Specifications collection type is considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip .
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.10. Follow-Up After Hospitalization for Mental Illness (FUH)

Category	Description
CBE # / eCQM CBE #:	0576 / N/A
Quality #:	391
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	<p>The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted:</p> <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge • The percentage of discharges for which the patient received follow-up within 7 days after discharge
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because we received feedback from interested parties that it is analytically challenging to implement this measure at the clinician level. The quality action of this measure is to ensure that patients discharged from an acute setting have outpatient follow ups. However, clinicians have provided feedback that patients who receive inpatient care, and are denominator eligible for this measure, may not always seek follow-up care within the inpatient clinician’s health system which limits the clinician’s or group’s ability to document adequate follow up to outpatient encounters. This limitation makes it difficult to attribute the required numerator actions back to the accountable clinician, creating undue burden for MIPS eligible clinicians.</p>
In the Circumstance the Measure is Retained	<p>There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.</p>

C.11. Tobacco Use and Help with Quitting Among Adolescents

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	402
CMS eCQM ID:	N/A
Collection Type:	MIPS CQMs Specifications
Measure Description:	The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention. We are proposing in Table D.22 of this Appendix substantive changes to measure Q226 that would broaden the denominator by lowering the age to 12 years old and would therefore capture the denominator-eligible patient population for this measure.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

C.12. Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	436
CMS eCQM ID:	N/A
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of final reports for patients aged 18 years and older undergoing computed tomography (CT) with documentation that one or more of the following dose reduction techniques were used: <ul style="list-style-type: none"> • Automated exposure control. • Adjustment of the mA and/or kV according to patient size. • Use of iterative reconstruction technique.
Measure Steward:	American College of Radiology/ American Medical Association/ National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to the measure Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) being proposed in Table A.1 of this Appendix. This new measure is an outcome and digital measure which supports MIPS' focus on quality measures that assess outcomes and reduce clinician burden. The focus of this measure is to reduce radiation doses from computerized tomography (CT) scans, which may increase the risk of cancer. This new measure is more robust than measure Q436 which represents a process measure.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2024 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.

Table Group CC: Proposed Partial Removal of Three Previously Finalized Quality Measures as Component Measures in Traditional MIPS and Proposed Retention of These Three Measures for Use in Relevant MVPs for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

Beginning with the CY 2024 performance period/2026 MIPS payment year and future years, we propose to maintain 3 quality measures: Q112: Breast Cancer Screening; Q113: Colorectal Cancer Screening; and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up Plan for MVP development and implementation (and maintain quality measures Q112 and Q113 for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP). The clinical concepts represented by these MIPS quality measures would support some specialties in a more targeted approach rather than the broader clinical concept of preventive screenings represented within the proposed Preventive Care and Wellness (composite) measure proposed under Table A.6 of Appendix 1: MIPS Quality Measures. The tables within this section offer the rationale for the proposal to partially remove quality measures Q112, Q113, and Q128, in which such quality measures are proposed for removal from traditional MIPS but retained for use in MVPs.

Therefore, we are proposing to remove the three aforementioned previously finalized quality measures from traditional MIPS due to the proposal of adding the Preventive Care and Wellness (composite) measure in Table A.6 of Appendix 1: MIPS Quality Measures, which includes the concepts of quality measures Q112, Q113, and Q128 as part of the proposed composite Preventive Care and Wellness measure, and retain measures Q112, Q113, and Q128 for use in MVPs (and retain measures Q112 and Q113 for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP as discussed in section III.G.2.c.(2) of this proposed rule; see Table Group E of this Appendix for the proposed changes to quality measures Q112 and Q113 available within the CMS Web Interface collection type).

Furthermore, measure Q112 is proposed as an available measure within the proposed Focusing on Women's Health MVP (see Appendix 3: MVP Inventory Table A.1).

Measure Q128 is proposed for removal from traditional MIPS with proposal for retention in MVPs under Table CC.3 of this Appendix. It is noted that measure Q128 is being proposed as an available measure within the following two proposed MVPs: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP and Rehabilitative Support for Musculoskeletal Care MVP (see Appendix 3: MVP Inventory Tables A.2 and A.5). Quality measure Q128 is currently an available measure within the following 2 previously finalized MVPs: Advancing Care for Heart Disease MVP and Improving Care for Lower Extremity Joint Repair MVP (see Appendix 3: MVP Inventory Tables B.5 and B.8).

We request comments on this proposal.

CC.1. Breast Cancer Screening

Category	Description
CBE # / eCQM CBE #:	2372 / N/A
Quality #:	112
CMS eCQM ID:	CMS125v12
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of women 50-74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we propose a more robust and comprehensive measure under Table A.6: Preventive Care and Wellness (composite) of this Appendix. This clinical concept is included as one of the components of the Preventive Care and Wellness (composite) measure.</p> <p>Measure Q112 only focuses on a single clinical concept of women who have had a mammogram screening for breast cancer rather than a comprehensive preventive care and wellness approach; however, the clinical quality action assessed within measure Q112 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap within the quality performance category of these MVPs. Therefore, we propose the removal of this measure from traditional MIPS but propose retention of this measure for use in relevant MVPs.</p> <p>Measure Q112 has already been finalized in the Promoting Wellness MVP but is proposed for removal from that MVP due to the proposal of the Preventive Care and Wellness (composite) measure under Table A.6 of this Appendix and proposal of a consolidated MVP titled Value in Primary Care (see Appendix 3: MVP Inventory Table B.11). Measure Q112 is currently proposed as a quality measure within the proposed Focusing on Women’s Health MVP (see Appendix 3: MVP Inventory Table A.1). It is also part of the CQMC, Adult Universal Core Set, and in alignment across multiple CMS quality reporting programs. This measure would remain for purposes of the CMS Web Interface collection type available to Share Savings Program ACOs reporting through the APP.</p>
In the Circumstance the Measure is Retained	<p>If measure A.6: Preventive Care and Wellness (composite) of this Appendix is not finalized for the CY 2024 performance period/2026 MIPS payment year and future years, we would retain measure Q112 in traditional MIPS in all applicable specialty sets under Table Group B of this Appendix. See Table Group DD of this Appendix for any substantive changes proposed for this measure.</p>

CC.2. Colorectal Cancer Screening

Category	Description
CBE # / eCQM CBE #:	0034/ N/A
Quality #:	113
CMS eCQM ID:	CMS130v12
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we propose a more robust and comprehensive measure under Table A.6: Preventive Care and Wellness (composite) of this Appendix. This clinical concept is included as one of the components of the Preventive Care and Wellness (composite) measure.</p> <p>Measure Q113 only focuses on a single clinical concept of patients who have had an appropriate screening for colorectal cancer rather than a comprehensive preventive care and wellness approach; however, the clinical quality action assessed within measure Q113 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap in these identified MVPs. Therefore, we propose the removal of this measure from traditional MIPS but propose retention of this measure for use in relevant MVPs.</p> <p>This measure has previously been finalized in the Promoting Wellness MVP but is proposed for removal from that MVP due to the proposal of the Preventive Care and Wellness (composite) measure under Table A.6 of this Appendix and proposal of a consolidated MVP titled Value in Primary Care (see Appendix 3: MVP Inventory Table B.11). This measure would remain available for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP.</p>
In the Circumstance the Measure is Retained	<p>If measure A.6: Preventive Care and Wellness (composite) of this Appendix is not finalized for the CY 2024 performance period/2026 MIPS payment year and future years, we would retain measure Q113 in traditional MIPS in all applicable specialty sets under Table Group B of this Appendix. See Table Group DD of this Appendix for any substantive changes proposed for this measure.</p>

CC.3. Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up Plan

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	128
CMS eCQM ID:	CMS69v12
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we propose a more robust and comprehensive measure under Table A.6: Preventive Care and Wellness (composite) of this Appendix. This clinical concept is included as one of the components of the Preventive Care and Wellness (composite) measure.</p> <p>Measure Q128 only focuses on the clinical concept of a documented BMI and follow-up plan if the BMI was outside of normal parameters, rather than a comprehensive preventive care and wellness approach. However, the clinical quality action assessed within measure Q128 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap in these identified MVPs. Therefore, we propose the removal of this measure from traditional MIPS but propose retention of this measure for use in relevant MVPs.</p> <p>Measure Q128 is currently proposed as a quality measure for use within two proposed MVPs: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP and Rehabilitative Support for Musculoskeletal Care MVP (see Appendix 3: MVP Inventory Tables A.2 and A.5). Measure Q128 is available within two previously finalized MVPs: Advancing Care for Heart Disease MVP and Improving Care for Lower Extremity Joint Repair MVP (see Appendix 3: MVP Inventory Tables B.5 and B.8). This measure has previously been finalized in the Promoting Wellness MVP but is proposed for removal from that MVP due to the proposal of the Preventive Care and Wellness (composite) measure under Table A.6 of this Appendix and proposal of a consolidated MVP titled Value in Primary Care (see Appendix 3: MVP Inventory Table B.11).</p>
In the Circumstance the Measure is Retained	If measure A.6: Preventive Care and Wellness (composite) of this Appendix is not finalized for the CY 2024 performance period/2026 MIPS payment year and future years, we would retain measure Q128 in traditional MIPS in all applicable specialty sets under Table Group B of this Appendix. See Table Group DD of this Appendix for any substantive changes proposed for this measure.

Table Group D: Previously Finalized Quality Measures with Substantive Changes Proposed for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

NOTE: Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table D of this Appendix as follows: CBE # / eCQM CBE #.

The D Tables within this proposed rule provide the substantive changes proposed for the quality measures in CY 2024. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2024 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2024 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2025. The 2024 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2024 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2024 quality measure specifications, in the form of an 'Instructions Note' to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only where telehealth encounters previously were not allowed as denominator eligible would the D table corresponding to a measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: For the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface measures as a collection type is only available for APM Entities, specifically Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting through the APM Performance Pathway (APP) (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS). Thus, the CMS Web Interface collection type is not listed in any table under Table Group D of this Appendix. For further information regarding the Shared Savings Program requirements under the APP and the CMS Web Interface collection type available under the APP, see section III.G.2.c.(2) of this proposed rule. For information regarding proposed changes to the CMS Web Interface measures available for the CY 2024 performance period/2026 MIPS payment year, see Table Group E of this Appendix.

D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
CBE # / eCQM CBE #:	0059/ N/A
Quality #:	001
CMS eCQM ID:	CMS122v12
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	<p>Modified collection type: Medicare CQMs Specifications, Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Dementia combinations: Donepezil-memantine to the list of dementia medication exclusion medications.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to update the collection types available for this measure to include the Medicare CQMs Specifications collection type to allow choice in submission method for SSP ACOs reporting via the APP. See section IV.A.4.f.(1)(b) and section III.G.2. for further information on the Medicare CQMs Specifications collection type.</p> <p>We propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with the intent of the measure to exclude patients with this condition from the measure.</p>

D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
CBE # / eCQM CBE #:	0081 / 0081e
Quality #:	005
CMS eCQM ID:	CMS135v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) \leq 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	Updated guidance: For the eCQM Specifications collection type: Added: In order for the Ejection Fraction result pathway to be recognized as below 40%, the result must be reported as a number with unit of %. A text string of "below 40%" or "ejection fraction between 35 and 40%" will not be recognized through electronic data capture. Although, this criteria can also be met using the Diagnosis pathway if specified as "Moderate or Severe."
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the guidance for the eCQM Specifications collection type by adding documentation requirements for ejection fraction results to ensure the data is being accurately captured. This added statement in the guidance clarifies that the ejection fraction results must be documented as a percentage (for example, 40%) in order to be recognized through electronic capture.

D.3 Coronary Artery Disease (CAD): Antiplatelet Therapy

Category	Description
CBE # / eCQM CBE #:	0067 / N/A
Quality #:	006
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
Substantive Change:	<p>Updated denominator exception: Removed: Documentation of system reason(s) for not prescribing aspirin or clopidogrel (e.g., lack of drug availability, other reasons attributable to the health care system).</p> <p>Updated denominator criteria: Removed: coding for subsequent myocardial infarction.</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to remove the denominator exception for documentation of system reason(s) as this option is not recommended for this measure due to wide-spread availability of these medications. This would also create alignment within the denominator exceptions across all American Heart Association (AHA) measures.</p> <p>We propose to remove patients with subsequent myocardial infarction (MI) from the denominator criteria as this patient population is duplicative in nature. For the purposes of this measure, those patients with a subsequent MI would already have a diagnosis of CAD from the initial MI. Therefore, these patients would already be correctly included in the denominator eligible patient population.</p>

D.4 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)

Category	Description
CBE # / eCQM CBE #:	0070 / 0070e
Quality #:	007
CMS eCQM ID:	CMS145v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤ 40% who were prescribed beta-blocker therapy.
Substantive Change:	<p>Updated guidance: For the eCQM Specifications collection type: Added: In order for the Ejection Fraction result pathway to be recognized as below 40%, the result must be reported as a number with unit of %. A text string of "below 40%" or "ejection fraction between 35 and 40%" will not be recognized through electronic data capture. Although, this criteria can also be met using the Diagnosis pathway if specified as "Moderate or Severe."</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Removed: For submission criteria 2: coding for subsequent myocardial infarction For all submission criteria: endoscopic procedures on the heart and pericardium.</p> <p>Updated denominator exception: For all collection types: Removed: For all submission criteria: Documentation of system reason(s) for not prescribing beta-blocker therapy (e.g., other reasons attributable to the health care system).</p>
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the guidance for the eCQM Specifications collection type by adding documentation requirements for ejection fraction results to ensure the data is being accurately captured. This added statement in the guidance clarifies that the ejection fraction results must be documented as a percentage (for example, 40%) to be recognized through electronic capture.</p> <p>We propose to remove patients with subsequent MI from the denominator criteria for the MIPS CQMs Specifications collection type as this patient population is duplicative in nature. For the purposes of this measure, those patients with a subsequent MI would already have a diagnosis of CAD from the initial MI. Therefore, these patients would already be correctly included in the denominator eligible patient population. Additionally, we propose to remove coding for endoscopic procedures of the heart and pericardium for the MIPS CQMs Specifications collection type as the coding is more related to the harvest of the artery and not the cardiac surgery itself and therefore, these patients may not be appropriate for the quality action.</p> <p>We propose to remove the denominator exception for all collection types for documentation of system reason(s) as this option is not recommended for this measure due to wide-spread availability of beta-blocker therapy. This would also create alignment within the denominator exceptions across all AHA measures.</p>

D.5 Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
CBE # / eCQM CBE #:	0083 / 0083e
Quality #:	008
CMS eCQM ID:	CMS144v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) \leq 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	Updated guidance: For the eCQM Specifications collection type: Added: In order for the Ejection Fraction result pathway to be recognized as below 40%, the result must be reported as a number with unit of %. A text string of "below 40%" or "ejection fraction between 35 and 40%" will not be recognized through electronic data capture. Although, this criteria can also be met using the Diagnosis pathway if specified as "Moderate or Severe."
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the guidance for the eCQM Specifications collection type by adding documentation requirements for ejection fraction results to ensure the data is being accurately captured. This added statement in the guidance clarifies that the ejection fraction results must be documented as a percentage (for example, 40%) to be recognized through electronic capture.

D.6 Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	019
CMS eCQM ID:	CMS142v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
Substantive Change:	<p>The measure description is revised to read: For the MIPS CQMs Specifications collection type: Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the performance period.</p> <p>For the eCQM Specifications collection type: Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the measurement period.</p> <p>The measure numerator is revised to read: For the MIPS CQMs Specifications collection type: Patients with documentation, at least once within the performance period, of the findings of the dilated macular or fundus exam via communication to the physician who manages the patient’s diabetic care.</p> <p>For the eCQM Specifications collection type: Patients with documentation, at least once within the measurement period, of the findings of the dilated macular or fundus exam via communication to the physician who manages the patient’s diabetic care.</p>
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure description and numerator to clarify that the “reporting period” is the 12-month performance period of January 1 st – December 31 st and to maintain consistency across measures in MIPS.

**D.7 Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women
Aged 50 Years and Older**

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	024
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.
Substantive Change:	Updated denominator criteria: For all collection types: Added: coding for initial encounters for age-related osteoporosis with current pathological fractures and periprosthetic fractures around internal prosthetic joints.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add coding for initial encounters for age-related or other osteoporosis with current pathological fractures and periprosthetic fractures around internal prosthetic joints to align with codes in the Healthcare Effectiveness Data and Information Set (HEDIS) Fractures Value Set and create consistency in implementation while ensuring the appropriate patient population is identified for numerator compliance assessment.

D.8 Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	048
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.
Substantive Change:	Updated denominator criteria: For all collection types: Added: coding for physical and occupational therapy clinician types.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add coding for for physical and occupational therapy clinician types as the measure is appropriate and it would be within their scope of care to complete this assessment.

D.9 Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	052
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of COPD (FEV1/FVC < 70%) and who have an FEV1 less than 60% predicted and have symptoms who were prescribed a long-acting inhaled bronchodilator.
Substantive Change:	<p>The measure title is revised from 'Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy' to: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy</p> <p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of COPD with a documented FEV1/FVC < 70% measured by spirometry, who are symptomatic, and were prescribed a long-acting inhaled bronchodilator.</p> <p>Update instructions: Added: This measure will be calculated with 2 performance rates:</p> <ol style="list-style-type: none"> 1) Percentage of patients aged 18 years and older with a diagnosis of COPD who have a documented airflow obstruction (FEV1/FVC < 70%) as measured by spirometry. 2) Percentage of patients aged 18 years and older with a diagnosis of COPD who have a documented airflow obstruction (FEV1/FVC < 70%) and are symptomatic, who were prescribed a long-acting inhaled bronchodilator. <p>A simple average, which is the sum of the performance rates divided by the number of performance rates will be used for performance.</p> <p>THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE:</p> <ol style="list-style-type: none"> 1. Patients diagnosed with COPD with who have documented airflow obstruction (FEV1/FVC < 70%) as measured by spirometry in the medical record. 2. Patients diagnosed with COPD who have documented airflow obstruction (FEV1/FVC < 70%) and are symptomatic, who were prescribed a long-acting bronchodilator. <p>This measure contains two submission criteria which together ensure that the proper evaluation and treatment is provided for patients with COPD and that patients without COPD are not provided inappropriate therapy. Submission Criteria 1 evaluates whether spirometry was performed for patients diagnosed with COPD and results confirming airflow obstruction are documented. Submission Criteria 2 evaluates whether a long-acting inhaled bronchodilator was prescribed for COPD patients who have symptoms.</p> <p>NOTE: Submission of the two performance rates is required for this measure. A simple average, which is the sum of the performance rates divided by the number of the performance rates, will be used to calculate performance.</p> <p>Updated denominator: Added: DENOMINATOR (SUBMISSION CRITERIA 1): All patients aged 18 and older with a diagnosis of COPD. Revised: DENOMINATOR (SUBMISSION CRITERIA 2): All patients aged 18 years and older with a diagnosis of COPD with spirometry results documented (FEV1/FVC < 70%), and have symptoms (e.g., dyspnea, cough/sputum, wheezing).</p> <p>Updated denominator criteria: Added: For Submission Criteria 1: Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years on date of encounter AND Diagnosis for COPD AND Patient encounter during the performance period WITHOUT Telehealth Modifier</p> <p>Revised: For Submission Criteria 2: Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years on date of encounter AND Diagnosis for COPD AND Spirometry results documented (FEV1/FVC < 70%) AND Patient encounter during the performance period WITHOUT Telehealth Modifier AND Patient has COPD symptoms (e.g., dyspnea, cough/sputum, wheezing)</p> <p>Updated numerator: Added: For Submission Criteria 1: Patients with documented spirometry and confirmed airflow obstruction (FEV1/FVC < 70%). Revised: For Submission Criteria 2: Symptomatic COPD patients who were prescribed a long-acting inhaled bronchodilator.</p>

Category	Description
	<p>Updated numerator instructions: Added: For Submission Criteria 1: Documentation of spirometry results of (FEV1/FVC < 70%) can take place before the performance period. The intent of Submission Criteria 1 is to ensure accurate diagnosis of COPD in patients with respiratory symptoms such as dyspnea, chronic cough or sputum production, and/or a history of exposure to risk factors for the disease is appropriate by having documentation of spirometry results of FEV1/FVC < 70%, which is required to make the COPD diagnosis.</p> <p>Updated numerator note: Added: For Submission Criteria 1: Denominator Exception(s) are determined on the date of the denominator eligible encounter. If there is a diagnosis of COPD, but there is no documented spirometry within five years of the date of the encounter, and the current spirometry result is $\geq 70\%$, an exception may be reported.</p> <p>Updated numerator options: Added: For Submission Criteria 1: Performance Met: Spirometry results with confirmed airflow obstruction (FEV1/FVC < 70%) documented and reviewed. Denominator Exception: Documentation of medical reason(s) for not documenting and reviewing spirometry results (e.g., patients with dementia or tracheostomy). Denominator Exception: No history of spirometry results with confirmed airflow obstruction (FEV1/FVC < 70%) and present spirometry is $\geq 70\%$. Denominator Exception: Documentation of system reason(s) for not documenting and reviewing spirometry results (e.g., spirometry equipment not available at the time of the encounter). Performance Not Met: No spirometry results with confirmed airflow obstruction (FEV1/FVC < 70%) documented and/or no spirometry performed with results documented during the encounter.</p> <p>Revised: For Submission Criteria 2: Denominator Exception: Documentation of medical reason(s) for not prescribing a long-acting inhaled bronchodilator (e.g., patient intolerance or history of side effects). Denominator Exception: Documentation of system reason(s) for not prescribing a long-acting inhaled bronchodilator (e.g., cost of treatment or lack of insurance). Removed: For Submission Criteria 2: Denominator Exception for patient reason(s).</p>
Measure Steward:	American Thoracic Society
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise this measure to add a submission criteria and performance rate so all patients are assessed for spirometry evaluation to ensure that the proper evaluation and subsequent treatment is provided for the patients with COPD. We propose to add submission criteria one to evaluate whether spirometry was performed and if there were results confirming airflow obstruction. Submission criteria 2 would evaluate whether a long-acting bronchodilator was prescribed for the COPD patient meeting evaluation criteria and having symptoms. The inclusion of submission criteria one “allows potentially wide application of testing to improve recognition and diagnosis of COPD” which is then complimented in submission criteria 2 with the appropriate care of patients diagnosed with COPD.⁴⁴²</p> <p>Additionally, we propose to revise the denominator exceptions for submission criteria two to clarify implementation by giving examples of scenarios that meet the denominator exception intent. We propose to remove the denominator exception for patient reason(s) as it is incumbent upon the clinician to educate the patient on the importance of treatment.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

⁴⁴² Johns, D. P., Walters, J. A., & Walters, E. H. (2014). Diagnosis and Early Detection of COPD Using Spirometry. *Journal of Thoracic Disease*, 6(11), 1557–1569. <https://pubmed.ncbi.nlm.nih.gov/25478197/>.

D.10 Appropriate Treatment for Upper Respiratory Infection (URI)

Category	Description
CBE # / eCQM CBE #:	0069 / N/A
Quality #:	065
CMS eCQM ID:	CMS154v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic order.
Substantive Change:	<p>Updated denominator exclusion: For all collection types: Revised: Exclude URI episodes where the patient is taking antibiotics in the 30 days prior to the episode date.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: coding for malignant neoplasms to the “Comorbid Conditions for Respiratory Conditions” value set, and aggressive periodontitis to the “Competing Conditions for Respiratory Conditions” value set.</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Revised: Outpatient visits, telephone visits, online assessments (i.e. e-visit or virtual check-in), observation stays or emergency department visits with a diagnosis of upper respiratory infection (URI) from January 1 to December 28 for patients 3 months of age and older.</p> <p>Updated denominator instructions: For the MIPS CQMs Specifications collection type: Added: An episode is defined as each eligible encounter for patients aged 3 months of age and older with a diagnosis of upper respiratory infection during the measurement period of January 1 to December 28.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Table 1 – Antibiotic medications to be utilized for the denominator exclusion: Added: Aminoglycosides: Amikacin, Gentamicin, Streptomycin, Tobramycin To Beta-lactamase inhibitors: Ampicillin-sulbactam, Piperacillin-tazobactam Fourth-generation cephalosporins: Cefepime To Lincomycin derivatives: Lincomycin Miscellaneous antibiotics: Aztreonam, Chloramphenicol, Dalbapristin-quinupristin, Daptomycin, Linezolid, Metronidazole, Vancomycin To Natural penicillins: Penicillin G benzathine, Penicillin G benzathine procaine, Penicillin G procaine To Penicillinase-resistant penicillins: Nafcillin, Oxacillin To Quinolones: Gemifloxacin Rifamycin derivatives: Rifampin To Second generation cephalosporins: Cefotetan, Cefoxitin To Sulfonamides: Sulfadiazine To Third generation cephalosporins: Cefotaxime, Ceftazidime Urinary anti-infectives: Fosfomycin, Nitrofurantoin, Nitrofurantoin macrocrystals-monohydrate, Trimethoprim Removed: Folate antagonist From Macrolides: Erythromycin ethylsuccinate, Erythromycin lactobionate, Erythromycin stearate From Third generation cephalosporins: Cefibuten, Cefditoren</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the denominator exclusion for all collection types to exclude patients who were actively taking antibiotics in the 30 days prior to the encounter. We propose to remove the clause of actively taking antibiotics on the day of the encounter as the measure logic does not check for antibiotic use of the day of the encounter. The revised denominator exclusion would align the measure logic across antibiotic measures and ensure the appropriate patient population is being assessed for antibiotics prescribed on the date of the encounter.</p> <p>We propose to update the value set/coding for the eCQM Specifications collection type by adding coding for 'Aggressive periodontitis' to the "Competing Conditions for Respiratory Conditions (2.16.840.1.113883.3.464.1003.102.12.1017)" value set and coding for 'Neoplasms' to the “Comorbid Conditions for Respiratory Conditions ((2.16.840.1.113883.3.464.1003.102.12.1017)” value set, which would allow clinicians to use the denominator exclusion as it may be appropriate to dispense antibiotics to these patients. Additionally, it would create alignment with NCQA's HEDIS measure.</p> <p>We propose to update the denominator and denominator instructions for the MIPS CQMs Specifications collection type to revise the timeframe for eligible encounters as this would align with the numerator timeframe of 'on or within 3 days of the eligible encounter'.</p> <p>We propose to update the list of antibiotic medications for purposes of determining patients appropriate for the denominator exclusion for the MIPS CQMs Specifications collection type by adding and removing prescriptions to align with the current medication table to ensure the appropriate patient population is being identified for denominator eligibility and ensuring the quality action is applicable.</p>

D.11 Appropriate Testing for Pharyngitis

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	066
CMS eCQM ID:	CMS146v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order and a group A Streptococcus (Strep) test in the seven-day period from three days prior to the episode date through three days after the episode date.
Substantive Change:	<p>Updated denominator exclusion: For all collection types: Revised: Exclude URI episodes where the patient is taking antibiotics in the 30 days prior to the episode date.</p> <p>Updated value set/coding: For the eCQM Specifications collection type: Added: coding for malignant neoplasms to the 'Competing Conditions for Respiratory Conditions' value set.</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Revised: Outpatient, telephone, online assessment (i.e. e-visit or virtual check-in), observation, or emergency department (ED) visits with a diagnosis of pharyngitis or tonsillitis from January 1 to December 28 and an antibiotic order on or within 3 days after the episode date among patients 3 years or older.</p> <p>Updated denominator instructions: For the MIPS CQMs Specifications collection type: Revised: An episode is defined as each eligible encounter for patients aged 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order during the measurement period of January 1 to December 28.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Table 1 – Antibiotic medications to be utilized for the denominator exclusion: Removed: From macrolides: Erythromycin ethylsuccinate, Erythromycin lactobionate, Erythromycin stearate Penicillinase resistant penicillins From Third generation cephalosporins: Cefibuten, Cefditoren</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the denominator exclusion for all collection types to exclude patients who were actively taking antibiotics in the 30 days prior to the encounter. We propose removal of the clause of actively taking antibiotics on the day of the encounter as the measure logic does not check for antibiotic use of the day of the encounter. The revised denominator exclusion would align the measure logic across antibiotic measures and ensure the appropriate patient population is being assessed for antibiotics prescribed on the date of the encounter.</p> <p>We propose to update the value set/coding for the eCQM Specifications collection type by adding coding for malignant neoplasms to the "Competing Conditions for Respiratory Conditions (2.16.840.1.113883.3.464.1003.102.12.1025)" value set which would allow clinicians to use the denominator exclusion as it may be appropriate to dispense antibiotics to these patients. Additionally, it creates alignment with NCQA's HEDIS measure.</p> <p>We propose to update the denominator and denominator instructions for the MIPS CQMs Specifications collection type to revise the timeframe for eligible encounters as this would align with the numerator timeframe of 'through 3 days after the eligible encounter'.</p> <p>We propose to update the list of antibiotic medications for purposes of determining patients appropriate for the denominator exclusion for the MIPS CQMs Specifications collection type by adding and removing prescriptions to align with the current medication table to ensure the appropriate patient population is being identified for denominator eligibility and ensuring the quality action is applicable.</p>

D.12 Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	104
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at high or very high risk of recurrence receiving external beam radiotherapy to the prostate who were prescribed androgen deprivation therapy in combination with external beam radiotherapy to the prostate.
Substantive Change:	<p>The denominator definition is revised to read:</p> <p>Risk Strata – Very Low, Low, Intermediate, High, or Very High –</p> <p>Very Low Risk – PSA < 10 ng/mL; AND Gleason score 6 or less/Gleason grade group 1; AND clinical stage T1c; AND presence of disease in fewer than 3 biopsy cores; AND ≤ 50% prostate cancer involvement in each fragment/core; AND PSA density < 0.15 ng/mL/g.</p> <p>Low Risk – PSA < 10 ng/mL; AND Gleason score 6 or less/Gleason grade group 1; AND clinical stage T1 to T2a.</p> <p>Intermediate Risk – PSA 10 to 20 ng/mL; OR Gleason score 7/Gleason grade group 2-3; OR clinical stage T2b to T2c; AND no high-risk group or very-high-risk group features.</p> <p>High Risk – Has one of the following: PSA > 20 ng/mL; OR Gleason score 8 to 10/Gleason grade group 4-5; OR clinically localized stage T3a, without any very-high-risk group features.</p> <p>Very High Risk – At least one of the following: Clinical stage T3b to T4; OR primary Gleason pattern 5; OR more than 4 cores with Gleason score 8 to 10/Gleason grade group 4-5 OR 2-3 high-risk features. (NCCN, 2022)</p> <p>External beam radiotherapy – “External beam radiotherapy” refers to 3D conformal radiation therapy (3D- CRT), intensity modulated radiation therapy (IMRT), stereotactic body radiotherapy (SBRT), and proton beam therapy.</p>
Measure Steward:	American Urological Association Education and Research
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the denominator definition to better classify risk category for patients receiving treatment for prostate cancer in accordance with revised NCCN guidelines. ⁴⁴³

D.13 Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis

Category	Description
CBE # / eCQM CBE #:	0058 / N/A
Quality #:	116
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.
Substantive Change:	<p>Updated denominator criteria: Added: coding for federally qualified health center (FQHC) services.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Table 1 – Antibiotic medications to be utilized for the denominator exclusion and numerator components:</p> <p>Removed: Ketolides From Third generation cephalosporins: Cefitibuten, Cefditoren</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update the denominator criteria to include coding for FQHC services to standardize codes in the value sets and align with the HEDIS version of this measure (https://www.ncqa.org/hedis/measures/avoidance-of-antibiotic-treatment-for-acute-bronchitis-bronchiolitis/).</p> <p>We propose to update the list of antibiotic medications, found in Table 1 – Antibiotic Medications, used to determine patients who are appropriate for the denominator exclusion and numerator compliance. This proposed update would ensure the appropriate patient population is being identified for denominator eligibility and ensuring the quality action is assessed appropriately by removing antibiotics that may not fully align with the measure intent and standardizing medication names to maintain alignment with the HEDIS measure.</p>

D.14 Diabetes: Eye Exam

Category	Description
CBE # / eCQM CBE #:	0055 / N/A
Quality #:	117
CMS eCQM ID:	CMS131v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	<p>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p> <p>Updated numerator note: For the MIPS CQMs Specifications collection type: Added: reporting of CPT 92229 meets the intent of the quality action for performance met.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the denominator exclusion for the MIPS CQMs Specifications collection type to include Donepezil-memantine in the list of dementia medication list, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p> <p>Additionally for the MIPS CQMs Specifications collection type, we propose to update the numerator note to indicate that denominator eligible patients who receive services under CPT code 92229 would meet the intent of the measure and should be included in the appropriate performance met numerator option, based on retinopathy findings.</p>

D.15 Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)

Category	Description
CBE # / eCQM CBE #:	0066 / N/A
Quality #:	118
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB therapy.
Substantive Change:	Updated denominator criteria: Removed: For all submission criteria: coding for subsequent myocardial infarction. Updated denominator exception: Removed: For all submission criteria: other reasons attributable to the health care system.
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove patients with subsequent MI from the denominator criteria as this patient population is duplicative in nature. For the purposes of this measure, those patients with a subsequent MI would already have a diagnosis of CAD from the initial MI. Therefore, these patients would already be correctly included in the denominator eligible patient population. We propose to remove documentation of system reason(s) from the denominator exception as this option is not recommended for this measure due to wide-spread availability of these medications. This would also create alignment within the denominator exceptions across all AHA measures.

D.16 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	134
CMS eCQM ID:	CMS2v13
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
Substantive Change:	<p>Modified collection type: Medicare CQMs Specifications, Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: The intent of the measure is to screen for new cases of depression in patients who have never had a diagnosis of bipolar disorder. Patients who have ever been diagnosed with bipolar disorder prior to the qualifying encounter used to evaluate the numerator will be excluded from the measure regardless of whether the diagnosis is active or not.</p> <p>Updated denominator exclusion: For all collection types: Removed: Diagnosis of depression from the denominator exclusion.</p> <p>Updated denominator note: For the MIPS CQMs Specifications and Medicare Part B Claims Specifications collection types: Removed: Diagnosis of depression from the denominator note.</p> <p>Updated denominator definition: For the MIPS CQMs Specifications and Medicare Part B Claims Specifications collection types: Removed: Diagnosis of depression from the denominator exclusion definition.</p> <p>Updated denominator criteria: For all collection types: Added: coding for qualifying encounters for nutritionists/dieticians and home-based health care.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the collection types available for this measure to include the Medicare CQMs Specifications collection type to allow choice in submission method for SSP ACOs reporting via the APP. See section IV.A.4.f.(1)(b) and section III.G.2. for further information on the Medicare CQMs Specifications collection type.</p> <p>We propose to revise the guidance for the eCQM Specifications collection type to reflect inclusion of patients with a previous inactive (or resolved) diagnosis of depression as it is important to identify patients who have been treated for depression in the past but may have re-emerging symptoms.</p> <p>We also propose to revise the denominator exclusion to remove a diagnosis of depression as an applicable exclusion, as patients with a history of depression may require more frequent monitoring and ongoing treatment for reoccurrence of symptoms.</p> <p>We propose to update the denominator to include encounter codes for nutritionists and dieticians, as well as home-based encounter codes, as it is clinically appropriate to conduct depression screenings during these encounters.</p>

D.17 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care

Category	Description
CBE # / eCQM CBE #:	0563 / N/A
Quality #:	141
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 15% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 15% from the pre-intervention level, a plan of care was documented within the 12 month performance period.
Substantive Change:	<p>The measure title is revised from 'Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care ' to: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care.</p> <p>The measure description is revised to read: For all collection types: Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.</p> <p>The measure numerator is revised to read: For all collection types: Patients whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.</p> <p>Updated definitions: For all collection types: Revised: Glaucoma Treatment Not Failed – The most recent IOP was reduced by at least 20% in the affected eye or if both eyes were affected, the reduction of at least 20% occurred in both eyes from pre-intervention levels.</p> <p>Updated numerator instructions: For all collection types: Revised: to reflect an IOP reduction goal of 20% or more from pre-intervention levels.</p> <p>Updated numerator options: For all collection types: Revised: to reflect an IOP reduction goal of 20% or more from pre-intervention levels.</p>
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise multiple components of this measure for all collection types to align with the latest scientific evidence that shows that 20 percent reduction in pre-intervention IOP optimizes patient outcomes by reducing the rate of worsening visual fields and is used as a benchmark for treatment outcomes. In a recent randomized clinical trial comparing phaco/Kahook Dual Blade to phaco/iStent, success was defined as at least a 20 percent reduction in IOP or reduction of one or more glaucoma medications from baseline. ⁴⁴⁴ In the only multicenter randomized clinical trial comparing minimally invasive glaucoma surgery standalone procedures, the COMPARE Study defined success as an unmedicated IOP reduction of at least 20 percent from baseline or unmedicated IOP less than or equal to 18 mmHg. ⁴⁴⁵

D.18 Functional Outcome Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	182
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.
Substantive Change:	<p>Updated numerator definition: Revised: Functional Outcome Deficiencies – Impairment, loss of function, or difficulty with participation in daily activities related to physical (e.g., musculoskeletal, cardiovascular, pulmonary, integumentary), sensory, cognitive, behavioral, or visual/perceptual impairments.</p> <p>Updated denominator criteria: Added: coding for cognitive assessment.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the numerator definition to describe assessment areas more accurately and completely for physical therapy and occupational therapy clinicians. We also propose to add qualifying encounter coding utilized for cognitive assessment, as the quality action would be appropriate for this patient population.

D.19 Stroke and Stroke Rehabilitation: Thrombolytic Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	187
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within 3.5 hours of time last known well and for whom IV thrombolytic therapy was initiated within 4.5 hours of time last known well.
Substantive Change:	Updated denominator exception: Removed: Tenecteplase (TNK) as an example of a denominator exception.
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove Tenecteplase (TNK) as one of the examples for the denominator exception as the numerator action is looking at patients for whom IV thrombolytic therapy was initiated within 4.5 hours.

D.20 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
CBE # / eCQM CBE #:	0565 / 0565e
Quality #:	191
CMS eCQM ID:	CMS133v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	Updated logic and logic definitions: For the eCQM Specifications collection type: Revised: logic to ensure surgeries on Sep 30 are included in the denominator.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise the measure logic for the eCQM Specifications collection type to include cataract surgeries performed on September 30 to align with the measure intent of including all cataract surgeries performed between January 1 st and September 30 th of the measurement period.

D.21 HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia, Gonorrhea, and Syphilis

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	205
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 13 years and older with a diagnosis of HIV/AIDS for whom chlamydia, gonorrhea, and syphilis screenings were performed at least once since the diagnosis of HIV infection.
Substantive Change:	<p>Modified collection type: eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>The measure description is revised to read: Percentage of patients 13 years of age and older with a diagnosis of HIV who had tests for syphilis, gonorrhea, and chlamydia performed within the performance period.</p> <p>Updated instructions: Removed: Only patients who had at least two visits during the performance period, with at least 90 days between each visit will be counted in the denominator for this measure.</p> <p>The denominator is revised to read: All patients 13 years of age and older at the start of the performance period with a diagnosis of HIV before the end of the performance period with an eligible encounter during the performance period.</p> <p>Updated denominator criteria: Revised: age determined at start of the performance period. Removed: At Least Two Denominator Eligible Encounters During the Measurement Year, With at Least 90 days Between Each. Added: coding for nonphysician, physician, and qualified health care professional (QHP) telephone assessments, residence services, and preventive medicine. Updated denominator exclusion: Removed: exclusion for patients receiving hospice services.</p> <p>The numerator is revised to read: Patients who were tested for each of the following at least once during the performance period: syphilis, gonorrhea, and chlamydia.</p> <p>Updated denominator exception: Removed: Chlamydia, gonorrhea, and syphilis screening results not documented (Patient refusal is the only allowed exception).</p>
Measure Steward:	Health Resources and Services Administration
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the collection types available for this measure to include the eCQM Specification collection type to allow choice in submission method.</p> <p>We propose to update the measure to reflect the clinical recommendations^{446 447} for annual sexually transmitted infections (STIs) screenings given the prevalence of sexually transmitted co-infections over the course of HIV disease. According to one literature review, the mean prevalence of STI co-infection was 16.3 percent with syphilis, gonorrhea, and chlamydia showing median rates of 9.5 percent, 9.5 percent, and 5 percent respectively.⁴⁴⁸ A key takeaway from this review, continued high rates of co-occurring STIs in this patient population will hinder efforts in HIV transmission prevention.</p> <p>We propose to update the instructions and denominator criteria to remove the requirement for at least two denominator eligible visits to ensure all patients who have been diagnosed with HIV receive appropriate testing. We propose to revise the age anchor to be at the start of the performance period to reduce burden in implementation and add coding for preventive medicine encounters, nonphysician, physician, and qualified health care professional (QHP) telephone assessments, and home or residence visits as it would be appropriate for patients at these encounters to be assessed for the quality action. We propose to remove the denominator exclusion for patients who use hospice services as it may still be appropriate to screen for and subsequently treat these infections. Additionally, we propose to remove the denominator exception for patient refusal as these sexually transmitted diseases can increase the risk for HIV infection through increases in the infectiousness and an individual's susceptibility.⁴⁴⁹</p>

D.22 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	226
CMS eCQM ID:	CMS138v12
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.
Substantive Change:	<p>Updated measure description: For all collection types: Revised: Patient age to 12 years and older.</p> <p>Updated instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Patient age to 12 years and older.</p> <p>1) Updated initial patient population: For the eCQM Specifications Collection type: Revised: All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period.</p> <p>Updated denominator: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: For all submission criteria: Patient age to 12 years and older.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: For all submission criteria: Patient age to 12 years and older.</p> <p>Updated measure analytic: For all collection types: Revised: data completeness will be determined utilizing performance rate one.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose revisions to this measure for all collection types to combine the patient population within Q402: Tobacco Use and Help with Quitting Among Adolescents with that of Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention resulting in a single, more robust measure, by lowering the denominator eligible age to 12 years and older to allow for the inclusion of adolescents into the measure’s denominator. Measure Q402 has been proposed for removal under Table C.11 of this Appendix.</p> <p>We propose to update the analytic of the measure to utilize performance rate one for the determination of data completeness to ensure a complete data set is submitted and inclusive of all denominator eligible patients for this measure. As submission criteria two only includes those patients identified as tobacco users, the intent of the measure is to also ensure screening of all patients aged 12 years and older. Assessing data completeness utilizing submission criteria one will ensure that screening information was collected.</p>

D.23 Controlling High Blood Pressure

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	236
CMS eCQM ID:	CMS165v12
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	<p>Modified collection type: Medicare CQMs Specifications, Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>The measure guidance is revised to read: For the eCQM Specifications collection type: In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician’s responsibility and discretion to confirm the automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient’s medical record.</p> <p>The measure instructions note and numerator note are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician’s responsibility and discretion to confirm automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient’s medical record.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p> <p>The measure initial patient population is revised to read: For the eCQM Specifications collection type: Patients 18-85 years of age by the end of the measurement period who had a visit during the measurement period and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to update the collection types available for this measure to include the Medicare CQMs Specifications collection type to allow choice in submission method for SSP ACOs reporting via the APP. See section IV.A.4.f.(1)(b) and section III.G.2. for further information on the Medicare CQMs Specifications collection type.</p> <p>We propose to revise the initial patient population for the eCQM Specifications collection type by specifying the patient visit must occur during the measurement period to clarify the encounter timing.</p> <p>We propose to revise the measure guidance for the eCQM Specifications collection type and the instructions note and numerator note for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types around remote monitoring devices for capturing blood pressure readings. Currently, the measure allows patient reported data using most methods of digital collection/reporting and prohibits patient reported data taken with non-digital devices, such as with a manual blood pressure cuff and stethoscope. The measure is agnostic to how the reading gets in and the documentation practice of each office; therefore, whether patient is “conveying the reading to the clinician” by manually entering the BP reading (for example, patient portal) or having the device auto-transmit data directly, it is the clinician’s responsibility and discretion to confirm that the automated blood pressure monitor used to obtain the blood pressure is considered acceptable and reliable.</p> <p>Additionally, we propose to update the denominator exclusion for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to include Donepezil-memantine in the list of dementia medication list, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p>

D.24 Use of High-Risk Medications in Older Adults

Category	Description
CBE # / eCQM CBE #:	0022 / N/A
Quality #:	238
CMS eCQM ID:	CMS156v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.
Substantive Change:	<p>Updated numerator definition: For the MIPS CQMs Specifications collection type: Revised: For Numerator (Submission Criteria 1): Definitions: Table 1 - High-Risk Medications at any dose or duration:</p>

Category	Description
	<p>Revised: Antithrombotics – Dipyridamole (oral, excluding extended release) Cardiovascular, other – Nifedipine (excluding extended release)</p> <p>Table 2 - High-Risk Medications With Days Supply Criteria Removed: From Anti-Infectives, other - Nitrofurantoin macrocrystals</p> <p>Table 3 - High-Risk Medications With Average Daily Dose Criteria Added: Description: Alpha agonists, central Description: Cardiovascular, other Description: Tertiary tricyclic antidepressants (TCAs) (as single agent or as part of combination products) Removed: Doxepin hydrochloride</p> <p>For Numerator (Submission Criteria 2): Definitions: Table 4 - High-Risk Medications Added: To Antipsychotics, first (conventional) and second (atypical) generation - Aripiprazole lauroxil</p> <p>The measure numerator is revised to read: For the eCQM Specifications collection type: Submission Criteria/Rate 2: Patients with at least two orders of high-risk medications from the same drug class (i.e., antipsychotics and benzodiazepines) on different days except for appropriate diagnoses. a. Patients with two or more antipsychotic prescriptions ordered on different days, and who did not have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the IPSD for antipsychotics. b. Patients with two or more benzodiazepine prescriptions ordered on different days, and who did not have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.</p> <p>Updated numerator exclusion: For the eCQM Specifications collection type: Removed: Rate 2: For patients with two or more antipsychotic prescriptions ordered on different days, and who did not have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the IPSD for antipsychotics. For patients with two or more benzodiazepine prescriptions ordered on different days, and who did not have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.</p> <p>Updated numerator logic: For the eCQM Specifications collection type: Revised: for medications ordered on the same day intended to start on different dates.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to revise the medication tables for the MIPS CQMs Specifications collection type to align with the current guidelines and ensure appropriate high-risk medications are identified. This would align with the intent of the measure and ensure the appropriate patient population is being assessed for the quality action.</p> <p>We propose to update the numerator for all collection types to clarify and ensure capture of the appropriate patient population. For the eCQM Specifications collection type, this was achieved by removing the standalone numerator exclusion and incorporating the exclusion language in the numerator criteria, to mitigate previous implementation concerns. Additionally, we propose to add logic for medications ordered on the same day but intended to start on different dates.</p>

D.25 Childhood Immunization Status

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	240
CMS eCQM ID:	CMS117v12
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three Hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one Hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
Substantive Change:	Updated numerator: Revised: IPV, MMR, VZV, PCV, Hep A, and Flu: to allow for anaphylaxis due to the vaccine to count towards numerator compliance.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add language excluding patients with anaphylaxis due to vaccine administration to 6 of the 10 numerator criteria where applicable. A history of a severe allergic reaction to a vaccine should be considered a contraindication to additional doses of the same vaccine (https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/adverse-reactions.html).

D.26 Cardiac Rehabilitation Patient Referral from an Outpatient Setting

Category	Description
CBE # / eCQM CBE #:	0643 / N/A
Quality #:	243
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QOMs Specifications
Current Measure Description:	Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program.
Substantive Change:	Updated denominator criteria: Removed: From 'Coronary Artery Bypass Graft Surgery' coding for endoscopic procedures on the heart and pericardium.
Measure Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove coding for endoscopic procedures of the heart and pericardium as the coding is more related to the harvest of the artery and not the cardiac surgery itself and therefore, these patients may not be appropriate for the quality action.

D.27 Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	254
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.
Substantive Change:	<p>Updated denominator criteria: Revised: Diagnosis of Other Current Condition in the Mother Classifiable Elsewhere but Complicating Pregnancy, Childbirth, or the Puerperium to Current Diagnosis of Pregnancy. Added: coding for other and unspecified abnormal uterine and vaginal bleeding and current diagnosis of pregnancy.</p> <p>Updated denominator exception: Removed: patient has visited the ED multiple times within 72 hours.</p> <p>Updated measure instructions and numerator instructions: Revised: submission frequency from each time to each visit.</p>
Measure Steward:	American College of Emergency Physicians
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator criteria to include other and unspecified abnormal uterine and vaginal bleeding coding and revised the criteria for pregnancy to ensure all applicable patients are being included in the denominator eligible population and are being appropriately assessed. Additionally, we propose to remove the exception for those patients that have visited the ED multiple times within 72 hours and revise the measure submission to each denominator eligible visit as it would be clinically appropriate for them to receive an ultrasound with pregnancy location determination at each visit.

D.28 Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	275
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with a diagnosis of inflammatory bowel disease (IBD) who had Hepatitis B Virus (HBV) status assessed and results interpreted prior to initiating anti-TNF (tumor necrosis factor) therapy.
Substantive Change:	<p>The measure denominator is revised to read: All patients, regardless of age, with a diagnosis of inflammatory bowel disease who initiated an anti-TNF agent during the performance period.</p> <p>Updated denominator definition: Revised: initiated an anti-TNF agent.</p> <p>Updated denominator criteria: Revised: initiated an anti-TNF agent.</p>
Measure Steward:	American Gastroenterological Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add initiated an anti-TNF agent during the performance period in order to capture the intended patient population accurately. As the measure is currently written, it would allow patients who initiated treatment prior to the performance period and could inflate the intended population and possibly impact performance negatively with no clinician recourse.

D.29 Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	279
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured.
Substantive Change:	<p>The measure title is revised from ‘Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy’ to: Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy.</p> <p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea (OSA) that were prescribed an evidence-based therapy that had documentation that adherence to therapy was assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available).</p> <p>The measure denominator is revised to read: All patients aged 18 years and older with obstructive sleep apnea who were prescribed an evidence-based therapy.</p> <p>Updated denominator definition: Added: Evidence-based Therapy – includes positive airway pressure, oral appliances, positional therapies, hypoglossal nerve stimulation, or other devices with monitoring capabilities.</p> <p>Updated denominator criteria: Revised: coding to reflect a diagnosis of obstructive sleep apnea. Revised: Evidence-based therapy was prescribed.</p> <p>Updated numerator: Revised: Patients with documentation that adherence to therapy was assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available).</p> <p>Updated numerator definition: Added: Documentation of adherence to therapy – includes a note documented in the patient’s medical record that patient is adherent to the prescribed therapy for obstructive sleep apnea.</p> <p>Objective Informatics – a telemonitoring system that shows data demonstrating patient adherence to the prescribed therapy for obstructive sleep apnea (i.e., CPAP machines with SD cards that store data).</p> <p>Self-Reporting – patient and/or parent/caregiver attests to compliance with prescribed therapy for obstructive sleep apnea, which is documented in the medical record.</p> <p>Objective Reporting – data that are reported from an objective informatics or other data source and is not reported by the patient or parent/caregiver. Removed: Objectively Measured definition.</p> <p>Updated numerator options: Revised: Performance Met: Adherence to therapy was assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available, documented) Denominator Exception: Documentation of reason(s) for not objectively reporting adherence to evidence-based therapy (e.g., patients who have been diagnosed with a terminal or advanced disease with an expected life span of less than 6 months, patients who decline therapy, patients who do not return for follow-up at least annually, patients unable to access/afford therapy, patient’s insurance will not cover therapy) Performance Not Met: Adherence to therapy was not assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available), reason not given.</p>
Measure Steward:	American Academy of Sleep Medicine
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update multiple components of this measure to reflect on the assessment of patients with obstructive sleep apnea (OSA) who were prescribed an evidence-based therapy by revising the denominator criteria to reflect this patient population. We propose revisions to this measure to add flexibility in how the numerator is evaluated by allowing self-reporting for patients who don’t have access to objective informatics systems or where resources may not be available. Additionally, we propose to add definitions that would clarify the intended denominator eligible patient population and appropriate clinical action for numerator compliance.

D.30 Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	291
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.
Substantive Change:	Updated denominator criteria: Added: coding for speech language pathology and occupational therapy clinician types.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add additional coding for speech language pathology and occupational therapy encounters. This would ensure a more complete denominator patient population is captured as it would be clinically appropriate for these clinician types to complete the quality action.

D.31 Chlamydia Screening for Women

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	310
CMS eCQM ID:	CMS153v12
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.
Substantive Change:	Updated denominator exclusion: Revised: Women who are only eligible for the initial population due to a pregnancy test during the measurement period, and who had an order for an x-ray or for a specified medication on the date of the pregnancy test or the six days after the pregnancy test.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the denominator exclusion language to clarify the timing. The original measure language "within 7 days" is ambiguous as it can be interpreted as either "7 days after pregnancy test" or "on the day of pregnancy test and 6 days after". Therefore, clarifying the timeframe within the measure to evaluate a 7-day period better aligns with the measure intent of to include the day of the pregnancy test.

D.32 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	317
CMS eCQM ID:	CMS22v12
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.
Substantive Change:	Updated denominator: For all collection types: Added: coding for audiology.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator criteria for all collection types to include audiology codes within the denominator eligible encounter criteria as this measure is applicable to their scope of care. Patients with high blood pressure are at an increased risk of hearing loss as compared to those without hypertension, making this concept important for audiologists to assess. ⁴⁵⁰

⁴⁵⁰ Agarwal, S., Mishra, A., Jagade, M., Kasbekar, V., & Nagle, S. K. (2013). Effects of Hypertension on Hearing. *Indian Journal of Otolaryngology and Head and Neck Surgery: Official Publication of the Association of Otolaryngologists of India*, 65(Suppl 3), 614–618. <https://doi.org/10.1007/s12070-013-0630-1>.

D.33 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	326
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Substantive Change:	Updated denominator exception: Revised: Documentation of medical reason(s) for not prescribing an FDA-approved anticoagulant (e.g., present or planned atrial appendage occlusion or ligation or patient being currently enrolled in a clinical trial related to AF/atrial flutter treatment) Removed: documentation of system reasons exception.
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator exception to include patients currently being enrolled in a clinical trial related to AF/atrial flutter treatment as a medical reason for exception. Patients that are enrolled into a clinical trial related to AF/atrial flutter treatment may have contraindications for receiving FDA-approved oral anticoagulant drug therapy. Additionally, we propose to remove the denominator exception for documentation of system reason(s) as this option is not recommended for this measure due to wide-spread availability of these medications. This would also create alignment within the denominator exceptions across all American Heart Association (AHA) measures.

D.34 Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	331
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.
Substantive Change:	Updated instructions: Added: Each unique occurrence is defined as a 90-day period from onset of acute viral sinusitis symptoms. If multiple occurrences are documented within a 90-day period, Merit-based Incentive Payment System (MIPS) eligible clinicians should submit the most recent instance.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure instructions to include additional clarifying language to remove ambiguity related to the definition of an occurrence of acute viral sinusitis. The revisions define a unique occurrence of acute viral sinusitis as a 90-day period from onset of acute viral sinusitis and include guidance in instances where multiple occurrences are documented.

D.35 HIV Viral Load Suppression

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	338
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients, regardless of age, with a diagnosis of HIV with a HIV viral load less than 200 copies/mL at last HIV viral load test during the measurement year.
Substantive Change:	<p>Modified collection type: eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p>Updated instructions: Revised: timing for patient encounter to the first 240 days of the performance period.</p> <p>The measure description is revised to read: Percentage of patients, regardless of age, diagnosed with HIV prior to or during the first 90 days of the performance period, with an eligible encounter in the first 240 days of the performance period, whose last HIV viral load test result was less than 200 copies/mL during the performance period.</p> <p>The measure denominator is revised to read: All patients, regardless of age, diagnosed with HIV prior to or during the first 90 days of the performance period with at least one eligible encounter in the first 240 days of the performance period.</p> <p>Updated denominator criteria: Added: coding for nonphysician, physician, and qualified health care professional (QHP) telephone assessments, residence services, and preventive medicine. Revised: timing for HIV diagnosis to be prior to or during the first 90 days of the performance period. Revised: timing for the denominator eligible encounter to occur during the first 240 days of the performance period.</p>
Measure Steward:	Health Resources and Services Administration
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We propose to update the collection types available for this measure to include the eCQM Specification collection type to allow choice in submission method.</p> <p>We propose to revise the measure description and denominator to update the timing of the patient’s HIV diagnosis and eligible encounter. Requiring the HIV diagnosis before or with the first 3 months of the performance period in conjunction with limiting the eligible encounter timeframe allows the MIPS eligible clinician time to treat the patient in an effort to achieve numerator compliance. A viral load less than 200 copies/mL is optimal for patients with HIV to stay healthy and reduce transmission to others (https://www.cdc.gov/hiv/risk/art/index.html). According to the Panel on Antiretroviral Guidelines for Adults and Adolescents, antiretroviral therapy (ART) should be initiated as soon as possible after HIV diagnosis (https://www.ncbi.nlm.nih.gov/books/NBK586306/). Furthermore, the Panel on Antiretroviral Guidelines for Adults and Adolescents states indicates that individuals who are adherent to their ARV regimen and do not harbor resistance mutations to the component drugs can generally achieve suppression 8 to 24 weeks after ART initiation; rarely, in some patients it may take longer.</p> <p>Additionally, we propose to update the measure to include coding for telephone assessments with nonphysician/QHPs, residence services, and preventive medicine visits within the denominator eligible encounter criteria as this measure is applicable to the scope of care given by these clinicians.</p>

D.36 Follow-Up Care for Children Prescribed ADHD Medication (ADD)

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	366
CMS eCQM ID:	CMS136v13
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of children 6-12 years of age and newly prescribed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported.</p> <p>a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase.</p> <p>b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.</p>
Substantive Change:	<p>Updated definition: Added: Treatment days (covered days): The actual number of calendar days covered with prescriptions during the 301-day period. Use the following steps to identify and calculate covered days. Step 1: For same medications that are prescribed on the same day or on different days with overlapping days' supply, the days' supply is summed. The start and end dates are then identified. The start date is the date of service of the earliest prescription event and the first covered day. The end date is the calendar day when the days' supply runs out. The start date through the end date are considered covered days. This rule assumes that the patient will take one prescription at a time (and start taking the next prescription after exhausting the previous prescription). For example: - If there are three 7-days' supply prescription events for the same medication on January 1, the start date is January 1 and the end date is January 21. Covered days include January 1–21. - If there are two 7-days' supply prescription events for the same medication on January 1 and January 5, the start date is January 1 and the end date is January 14. Covered days include January 1–14. - If there are three 7-days' supply prescription events for the same medication on January 1, a 7-days' supply prescription event on January 20 and a 7-days' supply prescription event on January 28, the start date is January 1 and the end date is February 4. Covered days include January 1–February 4. Step 2: For all other events (multiple prescriptions for the same medication on different days without overlap, multiple prescriptions for different medications on the same or different days, with or without overlap), the covered days are identified by the start and end dates for each prescription event individually. The start date through the end date are considered covered days. This rule assumes the member will take the different medications concurrently. Step 3: Each calendar day covered by one or more medications is considered one covered day.</p> <p>The initial patient population is revised to read: Initial Population 1: Children 6-12 years of age as of the Intake Period who had an IPSD and who had a visit within 6 months prior to the IPSD including the IPSD. Children are removed if they had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Initiation Phase. Initial Population 2: Children 6-12 years of age as of the Intake Period who had an IPSD and remained on the medication for at least 210 treatment days during the 301-day period, beginning on the IPSD through 300 days after the IPSD, and who had a visit within 6 months prior to the IPSD including the IPSD. Children are removed if they had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Continuation and Maintenance Phase.</p> <p>The measure numerator is revised to read: Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits on different dates of service during the 31-300 days after the IPSD.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We are proposing revisions to this measure that would simplify the logic and create definitions to align with the HEDIS measure by identifying the index prescription start date (IPSD) with negative medication history. We also propose to change the denominator qualifying encounter timeframe from during the measurement year to 6 months prior to the IPSD, which would enable the measure to attribute patients to clinicians who have a greater chance of interacting with the patient and/or prescribing the medication.</p> <p>Additionally, we propose to revise the numerator to align with the measure intent by clarifying that the two follow-up visits must occur on different dates.</p>

D.37 Depression Remission at Twelve Months

Category	Description
CBE # / eCQM CBE #:	0710 / 0710e
Quality #:	370
CMS eCQM ID:	CMS159v12
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
Substantive Change:	Updated denominator exclusion: For all collection types: Removed: Exclusion for patients who were permanent nursing home residents during the denominator identification period or the measure assessment period.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update all collection types to remove the denominator exclusion related to patients who were permanent nursing home residents. This component has an extremely low rate of use, demonstrating that it's not a meaningful exclusion for the measure.

D.38 Functional Status Assessment for Total Hip Replacement

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	376
CMS eCQM ID:	CMS56v12
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270 – 365 days after the surgery.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300 – 425 days after the surgery.</p> <p>The measure denominator exclusions are revised to read:</p> <ol style="list-style-type: none"> 1. Exclude patients who are in hospice care for any part of the measurement period. <p>Exclude patients with severe cognitive impairment that starts before or in any part of the measurement period.</p> <ol style="list-style-type: none"> 1. Exclude patients with one or more specific lower body fractures indicating trauma in the 24 hours before or at the start of the total hip arthroplasty. 2. Exclude patients with a partial hip arthroplasty procedure on the day of the total hip arthroplasty. 3. Exclude patients with a revision hip arthroplasty procedure, an implanted device/prosthesis removal procedure or a resurfacing/supplement procedure on the day of the total hip arthroplasty. 4. Exclude patients with a malignant neoplasm of the pelvis, sacrum, coccyx, lower limbs, or bone/bone marrow or a disseminated malignant neoplasm on the day of the total hip arthroplasty. 5. Exclude patients with a mechanical complication on the day of the total hip arthroplasty. 6. Exclude patients with a second total hip arthroplasty procedure 1 year before or after the original total hip arthroplasty procedure. 7. Exclude patients who die on the day of the total hip arthroplasty procedure or in the 300 days after. <p>The initial patient population is revised to read: Patients 19 years of age and older who had a primary THA between November two years prior to the measurement period and October of the year prior to measurement period; and who had an outpatient encounter between November of the year prior to the measurement period and the end of the measurement period.</p> <p>Updated numerator: Revised: timeframe for follow-up assessment to 300 – 425 days after the THA procedure.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to change the fracture exclusion from two fractures at the time of the procedure to one lower body fracture that would more accurately indicate a non-elective THA. We propose to add denominator exclusions to remove patients who do not receive elective THA and would not be appropriate for quality action assessment.</p> <p>We also propose to revise the initial patient population to push back the procedure timing and revise the numerator to extend the follow-up functional status assessment timing. This change harmonizes procedure and follow-up timing with other similar measures within the program reducing clinician burden when submitting similar measures across programs. This revision would also be reflected in the measure description.</p>

D.39 Children Who Have Dental Decay or Cavities

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	378
CMS eCQM ID:	CMS75v12
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months to 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.
Substantive Change:	<p>The measure description is revised to read: Percentage of children, 1 – 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.</p> <p>The measure initial patient population is revised to read: Children, 1 - 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise the age range in the description and the initial patient population, as dental visits before age one aren't significantly related to first dental examinations (https://pubmed.ncbi.nlm.nih.gov/25422016/). This change creates alignment with measures across programs such as the Medicaid Child Core set dental measures and the Dental Quality Alliance measures.

D.40 Primary Caries Prevention Intervention as Offered by Dentists

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	379
CMS eCQM ID:	CMS74v13
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months to 20 years of age, who received a fluoride varnish application during the measurement period as determined by a dentist.
Substantive Change:	<p>The measure description is revised to read: Percentage of children, 1 – 20 years of age, who received two fluoride varnish applications during the measurement period as determined by a dentist.</p> <p>Updated stratification: Revised: Population 1 to reflect patient 1 – 5 years of age.</p> <p>The measure initial patient population is revised to read: Children, 1 – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p> <p>Updated numerator: Revised: to require two fluoride varnishes on different days during the measurement period.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the age range for this measure as dental visits before age one are not significantly related to first dental examinations (https://pubmed.ncbi.nlm.nih.gov/25422016/). This change creates alignment with measures across programs such as the Medicaid Child Core set dental measures and the Dental Quality Alliance measures.</p> <p>We also propose to update the numerator to require two fluoride applications within the measurement period as opposed to one fluoride application. This change would also align the measure with current evidence, clinical recommendations, and with the Topical Fluoride for Children measure used in the Medicaid Child Core Set as well as the Topical Fluoride for Children measure stewarded by the Dental Quality Alliance (https://doi.org/10.14219/jada.archive.2013.0057).</p>

D.41 Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	382
CMS eCQM ID:	CMS177v12
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder (MDD) with an assessment for suicide risk.
Substantive Change:	<p>The measure description is revised to read: Percentage of patient visits for those patients aged 6 through 16 years at the start of the measurement period with a diagnosis of major depressive disorder (MDD) with an assessment for suicide risk.</p> <p>The initial patient population is revised to read: All patient visits for those patients aged 6 through 16 at the start of the measurement period with a diagnosis of major depressive disorder.</p>
Measure Steward:	Mathematica
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure description and initial patient population for the upper age limit to specify patients should be 16 years of age at the start of the measurement period. This would align with the current measure logic, which doesn't include patients who are 17 years of age.

D.42 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
CBE # / eCQM CBE #:	1879 / N/A
Quality #:	383
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QOMs Specifications
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
Substantive Change:	Updated denominator criteria: Added: additional outpatient place of service coding. Updated denominator exclusions: Revised: to exclude patients who have ever had a diagnosis of dementia.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to add additional outpatient place of service coding for use with encounter coding for the outpatient, emergency department, and non-acute inpatient setting as schizophrenia may be diagnosed at encounters within these settings. This would ensure a complete denominator patient population is captured for quality action assessment. We also propose to expand the denominator exclusion so that it applies to patients who have ever had dementia as it is a chronic condition that can't be resolved and use of antipsychotics should be reserved for severe symptoms that have failed to respond adequately to nonpharmacological management strategies (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4994396/).

D.43 Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	386
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice) at least once annually.
Substantive Change:	<p>The description is revised to read: Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequently as clinically indicated (i.e., rapid progression).</p> <p>The numerator is revised to read: Patients who were offered assistance in planning for end of life issues or whose existing end of life plan was reviewed or updated at least once annually or more frequently as clinically indicated (i.e., rapid progression).</p> <p>Updated numerator options: Revised: to include the concept of reviewing and updating an existing end of life plan.</p>
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the description, numerator, and numerator options to reflect numerator compliance for reviewing or updating an existing end of life plan. These revisions work to clarify the intent of the measure in regard to end of life issues and frequency, as well as the quality actions that would meet the intent of this measure, continuing to stress the importance of end of life planning.

D.44 Optimal Asthma Control

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	398
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QOMs Specifications
Current Measure Description:	Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.
Substantive Change:	Updated denominator exclusion: Removed: Patients who were permanent nursing home residents any time during the performance period.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update the measure criteria to remove patients who were permanent nursing home residents any time during the performance period from the denominator exclusions and allow these patients to be included within the denominator of this measure. Patients within a nursing home should still be assessed for the quality action within this measure as it supports overall health and quality of life.

D.45 One-Time Screening for Hepatitis C Virus (HCV) for all Patients

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	400
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients age >= 18 years who received one-time screening for Hepatitis C Virus (HCV) infection.
Substantive Change:	<p>The measure title is revised from ‘One-Time Screening for Hepatitis C Virus (HCV) for all patients’ to: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation</p> <p>The measure description is revised to read: Percentage of patients age >= 18 years have never been tested for Hepatitis C Virus (HCV) infection who receive an HCV infection test AND who have treatment initiated within three months or who are referred to a clinician who treats HCV infection within one month if tested positive for HCV</p> <p>The measure instructions are revised to read: This measure is to be submitted a minimum of once per performance period for all patients >=18 years AND who are seen twice for any visits or who have at least one preventive visit through September 30 of the performance period AND who have never received an HCV antibody test. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p>This measure will be calculated with 2 performance rates:</p> <ol style="list-style-type: none"> 1. Percentage of patients age >= 18 years who have never been tested for HCV antibodies and who receive an HCV antibody test. 2. Percentage of patients age >= 18 years who have a reactive HCV antibody test, who have a follow up HCV viral test, and if HCV viremia is detected, have treatment initiated within three months or are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test. <p>The denominator of submission criteria 2 is a subset of the resulting numerator for submission criteria 1, as submission criteria 2 is limited to assessing if patients who have a reactive HCV antibody test, have a follow up HCV viral test, and if HCV viremia is detected, treatment is initiated within three months or they are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test. For all patients age >=18 years who have never been tested for HCV antibodies, submission criteria 1 is applicable, but submission criteria 2 will only be applicable for those patients who have a reactive HCV antibody test.</p> <p>A simple average, which is the sum of the performance rates divided by the number of the performance rates will be used to calculate performance.</p> <p>NOTE: Include only eligible encounters and HCV antibody test results documented through September 30 of the performance period. This will allow the evaluation of at least 90 days for treatment initiation or documentation of referral made within the performance period.</p> <p>Updated denominator: Updated: THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE:</p> <ol style="list-style-type: none"> 1. All patients age >= 18 years age who have never been tested for HCV antibodies and who receive an HCV antibody test. AND 2. All patients age >= 18 years who have a reactive (positive) HCV antibody test and have a follow up HCV viral test, and if HCV viremia is detected, have treatment initiated within three months or are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test. <p>This measure contains two submission criteria that aim to identify patients who are tested for HCV antibodies (submission criteria 1) and patients who have a reactive HCV antibody test and who have a follow up HCV viral test, and if HCV viremia is detected, have treatment initiated within three months or are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test (submission criteria 2). By separating this measure into various submission criteria, the MIPS eligible clinician will be able to better ascertain where gaps in performance exist and identify opportunities for improvement. For accountability reporting in the CMS MIPS program, the rate for submission criteria 2 is used for performance, however, both performance rates must be submitted.</p> <p>Updated denominator/denominator criteria: Revised: SUBMISSION CRITERIA 1: Patients who have never been tested for HCV antibodies and who receive an HCV antibody test. DENOMINATOR (Submission Criteria 1): All patients >= 18 years of age who are seen twice for any visits or who have at least one preventive visit January 1 and September 30 of the performance period.</p> <p>Denominator Criteria (Eligible Cases): Patients aged ≥ 18 years of age AND At least one preventive encounter OR At least two patient encounters AND NOT DENOMINATOR EXCLUSION: Diagnosis for Chronic Hepatitis C OR</p>

Category	Description
	<p>Documentation or patient report of HCV antibody test or HCV RNA test which occurred prior to the performance period.</p> <p>Added: SUBMISSION CRITERIA 2: Patients with a reactive (positive) HCV antibody test with a follow up HCV viral test, and if HCV viremia is detected, treatment is initiated within three months or receives a referral to a clinician who treats HCV infection within one month of the reactive HCV antibody test</p> <p>DENOMINATOR (Submission Criteria 2): Patients \geq 18 years of age who are seen twice for any visits OR who have at least one preventive visit AND have documentation of a reactive HCV antibody test between January 1 and September 30 of the performance period. Denominator Criteria (Eligible Cases): Patients aged \geq 18 years of age AND All eligible instances when GXXXX is submitted for Performance Met (patient receives HCV antibody test and the test is reactive) in the numerator of Submission Criteria 1 AND At least one preventive encounter OR At least two patient encounters</p> <p>Updated denominator note: Added: For submission criteria 1: Either documentation of the prior HCV antibody test or HCV RNA test in the medical record or patient self-report of prior HCV antibody test or HCV RNA test is acceptable for this exclusion.</p> <p>Updated numerator: Revised: For submission criteria 1: Patients who receive an HCV antibody test between January 1 and September 30 of the performance period. Added: For submission criteria 2: Patients who have an HCV viral test conducted that (a) does not detect HCV viremia, or (b) detects HCV viremia and treatment is initiated within three months or they are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test.</p> <p>Updated definitions: Removed: For submission criteria 1: definition for screening for HCV Infection includes current or prior receipt of Added: For submission criteria 2: Definition: Examples of clinicians who treat HCV infection include but are not limited to: <ul style="list-style-type: none"> • Gastroenterologist • Hepatologist • Infectious disease clinicians Initiation of treatment definition for clinicians who do not refer patients to specialists for care: <ul style="list-style-type: none"> • Initiation of antiviral treatment, as appropriate, based on clinical guideline recommendations and patient characteristics. HCV viral test is defined as a test measuring an established marker of active HCV infection, including: <ul style="list-style-type: none"> • HCV RNA test • HCV core antigen test Updated numerator options: Revised: For submission criteria 1: Performance Met: Patient receives an HCV antibody test with nonreactive result Performance Met: Patient receives an HCV antibody test with reactive result Denominator Exception: Documentation of medical reason(s) for not receiving HCV antibody test due to limited life expectancy Performance Not Met: Patient does not receive HCV antibody test OR patient does receive HCV antibody test but results not documented, reason not given</p> <p>Added: For submission criteria 2: Performance Met: Patient, who has a reactive HCV antibody test, and has a follow up HCV viral test that detected HCV viremia, is referred within 1 month of the reactive HCV antibody test to a clinician who treats HCV infection Performance Met: Patient, who has a reactive HCV antibody test, and has a follow up HCV viral test that detected HCV viremia, has HCV treatment initiated within 3 months of the reactive HCV antibody test Performance Met: Patient has a reactive HCV antibody test, and has a follow up HCV viral test that does not detect HCV viremia Performance Not Met: Patient has a reactive HCV antibody test and does not have a follow-up HCV viral test, OR Patient has a reactive HCV antibody test and has a follow up HCV viral test that detects HCV viremia and is not referred to a clinician who treats HCV infection within 1 month and does not have HCV treatment initiated within 3 months of the reactive HCV antibody test, reason not given</p>
Measure Steward:	American Gastroenterological Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise this measure to include follow up testing for HCV and, if viremia is detected, that treatment is initiated, or patients are referred to a clinician who treats HCV infection. This will be accomplished by stratifying the measure to create submission criteria (with corresponding performance rate) for patients who have never been tested for HCV antibodies and who receive an HCV test, and a submission criterion (with corresponding performance rate) for patients who have a reactive HCV

Category	Description
	<p>antibody test and, if HCV viremia detected, have treatment initiated or referral for treatment. This revision would be reflected within multiple components within the specification. These revisions take the measure one step further to ensure actions are being taken once the screening is completed so patients receive the appropriate care resulting in positive health outcomes. We would continue to monitor this measure throughout the rulemaking process for testing being performed by the measure steward regarding these proposed changes to the measure. Finalization of these revisions are contingent on completion of this testing.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p>

D.46 Clinical Outcome Post Endovascular Stroke Treatment

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	409
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention.
Substantive Change:	Updated denominator exclusion: Added: For Submission Criteria 1: Exclude patients with a baseline mRS > 2
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to add a denominator exclusion for Submission Criteria 1 to account for patients who have a baseline mRS of greater than 2 as endovascular stroke intervention would not be clinically indicated for this patient population. ⁴⁵¹

⁴⁵¹ American Heart Association, American Stroke Association. Acute Ischemic Stroke: Current Treatment Approaches for Acute Ischemic Stroke [PowerPoint slides]. https://www.stroke.org/-/media/Stroke-Files/Ischemic-Stroke-Professional-Materials/AIS-Toolkit/AIS-Professional-Education-Presentation-ucm_485538.

D.47 Osteoporosis Management in Women Who Had a Fracture

Category	Description
CBE # / eCQM CBE #:	0053 / N/A
Quality #:	418
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
Current Measure Description:	The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.
Substantive Change:	Updated denominator criteria: Added: For all submission criteria: coding for nonphysician, physician, and qualified health care professional (QHP) telephone assessments, and federally qualified health center (FQHC) visit.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	Additionally, we propose to update the measure to include coding for telephone assessments with nonphysician/QHPs, and federally qualified health center (FQHC) visits within the denominator eligible encounter criteria as this measure is applicable to the scope of care given by these clinicians.

D.48 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling

Category	Description
CBE # / eCQM CBE #:	2152 / N/A
Quality #:	431
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.
Substantive Change:	Updated measure analytic: Revised: data completeness will be determined utilizing submission criteria one.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the analytic of the measure to utilize submission criteria one for the determination of data completeness to ensure a complete data submission for all denominator eligible patients for this measure. As submission criteria two only includes those patients identified as unhealthy alcohol users, the intent of the measure is to also ensure screening of all patients aged 18 years and older. Assessing data completeness utilizing submission criteria one will ensure that screening information was collected.

D.49 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	438
CMS eCQM ID:	CMS347v7
Current Collection Type:	eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <p>*All patients who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR</p> <p>*Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</p> <p>*Patients aged 40-75 years with a diagnosis of diabetes</p>
Substantive Change:	<p>The measure description is revised to read: For all collection types:</p> <p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • All patients who were previously diagnosed with or currently have a diagnosis clinical atherosclerotic cardiovascular disease (ASCVD) including an ASCVD procedure; OR • Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40-75 years with a diagnosis of diabetes; OR • Patients aged 40 to 75 with a 10-year ASCVD risk score of ≥ 20 percent. <p>Updated rate aggregation: For the eCQM Specifications collection type: Revised: Population 2: Patients aged 20 to 75 years at the beginning of the measurement period Added: Population 4: Patients aged 40 to 75 at the beginning of the measurement period with a 10-year ASCVD risk score of ≥ 20 percent during the measurement period. Revised: Performance Rate to aggregate all 4 populations into a single performance rate.</p> <p>Updated guidance: For the eCQM Specifications collection type: Revised: the process to prevent counting patients more than once.</p> <p>Updated denominator: For all collection types: Revised: DENOMINATOR (SUBMISSION CRITERIA 2): Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. Added: DENOMINATOR (SUBMISSION CRITERIA 4): Patients aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of ≥ 20 percent during the measurement period.</p> <p>Updated instructions: For the MIPS CQMs Specification collection type: Revised: THERE ARE FOUR SUBMISSION CRITERIA FOR THIS MEASURE**:</p> <ol style="list-style-type: none"> 1) All patients who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure. OR 2) Patients aged 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. OR 3) Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes. OR 4) Patients aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of ≥ 20 percent. <p>Revised: There is only one performance rate calculated for this measure. Patients can only be counted once and cannot be in more than one submission criteria. When submitting this measure, determine if the patient meets denominator eligibility in order of each risk category defined in the denominator submission criteria. For example, first evaluate if the patient meets denominator Submission Criteria 1. If no, then evaluate if the patient meets denominator Submission Criteria 2. If yes, then the patient will be in Submission Criteria 2 and is not eligible for denominator Submission Criteria 3 and 4.</p> <p>Updated initial patient population: For the eCQM Specifications collection type: Population 1: All patients who were previously diagnosed with or currently have a diagnosis of clinical ASCVD or ever had, including an ASCVD procedure. Population 2: Patients aged ≥ 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes.</p> <p>Population 4: Patients aged 40 to 75 at the beginning of the measurement period with 10-year ASCVD risk score (i.e., 2013 ACC/AHA ASCVD Risk Estimator or the ACC Risk Estimator Plus) of ≥ 20 percent during the measurement period.</p> <p>Updated denominator criteria: For the MIPS CQM Specifications collection type: Revised: For submission criteria 2: Patient aged 20 to 75 years at the beginning of the measurement period.</p>

Category	Description
	<p>Added: For submission criteria 4: Patients aged 40 through 75 years at the beginning of the measurement period AND Calculated 10-year ASCVD risk score of ≥ 20 percent during the measurement period AND Patient encounter during the performance period AND NOT DENOMINATOR EXCLUSIONS: Patients who are breastfeeding at any time during the measurement period OR Patients who have a diagnosis of rhabdomyolysis at any time during the measurement period</p> <p>Updated numerator: For the MIPS CQM Specifications collection type: Added: (SUBMISSION CRITERIA 4): Patients who are actively using or who receive an order (prescription) for statin therapy at any time during the measurement period.</p> <p>Updated denominator exception: For the MIPS CQMs Specifications collection type: Added: For submission criteria 4: Denominator Exceptions</p> <ol style="list-style-type: none"> 1. Active Liver or Hepatic Disease or Insufficiency 2. End Stage Renal Disease 3. Statin-Associated Muscle Symptoms (SAMS) <p>Updated numerator definition: For the MIPS CQM Specification collection type: Added: For submission criteria 4: Statin therapy – Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia.</p> <p>Updated numerator note: For the MIPS CQM Specification collection type: Added: For submission criteria 4: In order to meet the measure, current statin therapy use must be documented in the patient’s current medication list or ordered during the measurement period. Only statin therapy meets the measure Numerator criteria (NOT other cholesterol lowering medications). Prescription or order does NOT need to be linked to an encounter or visit; it may be called to the pharmacy. Statin medication “samples” provided to patients can be documented as “current statin therapy” if documented in the medication list in health/medical record. Patients who meet the denominator criteria for inclusion but are not prescribed or using statin therapy will NOT meet performance for this measure. Adherence to statin therapy is not calculated in this measure. It may not be appropriate to prescribe statin therapy for some patients (see exceptions and exclusions for the complete list). Intensity of statin therapy in primary and secondary prevention: The expert panel of the 2018 ACC/AHA/MS Guidelines [1] defines recommended intensity of statin therapy on the basis of the average expected LDL-C response to specific statin and dose. Although intensity of statin therapy is important in managing cholesterol, this measure assesses prescription of ANY statin therapy, irrespective of intensity. Assessment of appropriate intensity and dosage documentation added too much complexity to allow inclusion of statin therapy intensity in the measure at this time. Denominator Exceptions should be active during the measurement period.</p> <p>Updated numerator options: For the MIPS CQM Specification collection type: Added: For submission criteria 4: Performance Met: Patients who are currently statin therapy users or received an order (prescription) for statin therapy Denominator Exception: Documentation of medical reason(s) for not currently being a statin therapy user or receiving an order (prescription) for statin therapy (e.g., patient with statin-associated muscle symptoms or an allergy to statin medication therapy, patients who are receiving palliative or hospice care, patients with active liver disease or hepatic disease or insufficiency, patients with end stage renal disease [ESRD] or other medical reasons) Performance Not Met: Patients who are not currently statin therapy users or did not receive an order (prescription) for statin therapy</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose revisions to this measure that would allow it to align more closely with the 2019 ACC/AHA Guideline on the Primary Prevention of Cardiovascular Disease: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines.⁴⁵² Submission criteria one was updated to reflect a cap in the age denominator criteria to 75. The ACC/AHA 2018 cholesterol guidelines state that in adults older than 75 years with diabetes mellitus, it may be reasonable to initiate statin therapy after a clinician–patient discussion of potential benefits and risks for prevention of ASCVD events.⁴⁵³ Additionally we proposed to add submission criteria 4, which specifically assesses statin use for patients that have a 10-year ASCVD risk score of > 20 percent. Patients that meet this denominator criteria would be considered high risk and based on</p>

D.50 Non-Recommended Cervical Cancer Screening in Adolescent Females

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	443
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QOMs Specifications
Current Measure Description:	The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.
Substantive Change:	Updated denominator exclusion: Added: coding for Cytokine Release Syndrome.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the denominator exclusions criteria by adding ICD-10-CM codes for Cytokine Release Syndrome, which would allow clinicians to capture and exclude patients with Cytokine Release Syndrome, as it may be appropriate for these patients to receive cervical cancer screening. It would also create alignment with the HEDIS measure.

D.51 Appropriate Workup Prior to Endometrial Ablation

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	448
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.
Substantive Change:	Updated denominator criteria: Removed: coding for extraction of endometrium.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove ICD-10 codes 0UDB7ZZ and 0UDB8ZZ from the denominator criteria as these codes do not represent endometrial ablation, but rather endometrial extraction. This change would ensure that the patients included within the denominator would truly meet the intent of the measure. Additionally, it would ensure all patients undergoing this procedure are included within the denominator to be assessed for the quality action described in the numerator.

D.52 Functional Status After Primary Total Knee Replacement

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	470
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR tool at one year (9 to 15 months) postoperatively.
Substantive Change:	Updated numerator definition: Revised: Postoperative Assessment Oxford Knee Score (OKS) or KOOS, JR - A postoperative Oxford Knee Score (OKS) or KOOS, JR functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to 9 months and after 15 months postoperatively will not be used for measure calculation.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise the numerator definition to add KOOS, JR. The “KOOS, JR.” was developed from the original long version of the Knee injury and Osteoarthritis Outcome Score (KOOS) survey using Rasch analysis. The “KOOS, JR.” contains seven items from the original KOOS survey. Items are coded from 0 to 4, none to extreme respectively. “KOOS, JR.” is scored by summing the raw response (range 0-28) and then converting it to an interval score using the table provided below. The interval score ranges from 0 to 100 where 0 represents total knee disability and 100 represents perfect knee health. This short form tool was developed in 2017 (https://www.hss.edu/hoos-jr-koos-jr-outcomes-surveys.asp). Additionally, the language has been revised and would allow for assessments completed via telephone.

D.53 HIV Screening

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	475
CMS eCQM ID:	CMS349v6
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human Immunodeficiency Virus (HIV).
Substantive Change:	Updated denominator exception: Added: Patients who die on or before the end of the measurement period.
Measure Steward:	Centers for Disease Control and Prevention
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add a denominator exception for patients who die before receiving an HIV screening. Since it is possible that a clinician could advance schedule an HIV test for a patient who potentially may die prior to the test, allowing this denominator exception would preserve performance of reporting clinicians while maintaining the intent of the measure.

D.54 Psoriasis – Improvement in Patient-Reported Itch Severity

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	485
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients, aged 18 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit
Substantive Change:	<p>The description is revised to read: The percentage of patients, aged 8 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow up visit.</p> <p>The measure denominator is revised to read: All patients aged 8 years and older, with a diagnosis of psoriasis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.</p> <p>Updated denominator definition: Revised: patient age to 8 years and older on date of service Added: Visual Rating Scale (VRS) for Pruritis – Note: (This scale is intended for patients 18 years and older)</p> <p>Updated numerator: Revised: required assessment score change from 2 or more points to 3 or more points.</p> <p>Updated numerator options: Revised: required assessment score change from 2 or more points to 3 or more points.</p>
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the denominator and the denominator criteria to change the age from 18 years and older to 8 years and older. We also propose to add a note to the Visual Rating Scale (VRS) for Pruritis definition as this tool is only validated for patients 18 years and older. We propose a reduction in assessment score from 2 or more points to 3 or more points to align with current clinical guidelines. This skin condition has an annual prevalence of up to 0.71 percent within the pediatric patient population. Therefore, inclusion of the pediatric patient population would provide support for this frequently seen chronic inflammatory skin disorder and have significant impact on their overall quality of life (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5683294/).

D.55 Dermatitis – Improvement in Patient-Reported Itch Severity

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	486
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients, aged 18 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.
Substantive Change:	<p>The description is revised to read: The percentage of patients, aged 8 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow up visit.</p> <p>The measure denominator is revised to read: All patients aged 8 years and older, with a diagnosis of psoriasis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.</p> <p>Updated denominator definition: Removed: Visual Rating Scale (VRS) for Pruritis.</p> <p>Updated denominator criteria: Revised: patient age to 8 years and older on date of service Added: Visual Rating Scale (VRS) for Pruritis – Note: (This scale is intended for patients 18 years and older)</p> <p>Updated numerator: Revised: required assessment score change from 2 or more points to 3 or more points.</p> <p>Updated numerator options: Revised: required assessment score change from 2 or more points to 3 or more points.</p>
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the denominator and the denominator criteria to change the age from 18 years and older to 8 years and older. We also propose to add a note to the VRS for Pruritis definition as this tool is only validated for patients 18 years and older. We propose a reduction in assessment score from 2 or more points to 3 or more points to align with current clinical guidelines. Optimizing management of dermatitis in pediatric patients is critical to reduce signs of inflammation, alleviate pruritus and sleep disturbance, minimize the development and/or impact of comorbidities, and improve the patient and caregiver's quality of life (https://pubmed.ncbi.nlm.nih.gov/33838839/).

D.56 Screening for Social Drivers of Health

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	487
CMS eCQM ID:	N/A
Current Collection Type:	MIPS QMs Specifications
Current Measure Description:	Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
Substantive Change:	<p>Updated denominator criteria: Added: coding for occupational therapy.</p> <p>Updated denominator exception: Added: Denominator Exception: Patient reason for not screening for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety (e.g., patient declined or other patient reasons)</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to add encounter codes for MIPS eligible occupational therapists based upon interested parties' feedback: "Occupational therapy practitioners across practice settings should consider how current housing status and social determinants of health may impact their clients' occupational performance and ability to manage health conditions" (https://pubmed.ncbi.nlm.nih.gov/32007967/). We also propose to include a denominator exception as some patients may prefer not to discuss this information, however, attempting to screen every patient is important.</p>

D.57 Adult Immunization Status

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	493
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
Substantive Change:	<p>Updated denominator: Removed: For all submission criteria: Active chemotherapy during the measurement period OR Bone marrow transplant during the measurement period OR History of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia & Hemoglobin (HB)-S disease or cerebrospinal fluid leaks any time during the patient’s history prior to or during the measurement period:</p> <ul style="list-style-type: none"> • Anatomic or Functional Asplenia • Cerebrospinal Fluid Leak • Cochlear Implant • Cochlear Implant Device • Cochlear Implant Diagnosis • Immunocompromising Conditions • Sickle Cell Anemia and HB-S Disease <p>Updated denominator exception: Added: For submission criteria 3: Documentation that administration of second recombinant zoster vaccine could not occur during the performance period due to the recommended 2-6 month interval between doses (i.e., first dose received after October 31)</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove denominator exclusions for all submission criteria for patients receiving active chemotherapy, who have a bone marrow transplant, or history of immunocompromising conditions as these are not contraindicators for receiving these vaccines and is in alignment with ACIP recommendations (https://www.cdc.gov/vaccines/schedules/hcp/imz/adult.html). We propose to add a denominator exception if there is a system reason that the second dose of recombinant zoster vaccine could not be administered within the prescribed interval during the performance period, as there is a minimum interval requirement between doses.

Table Group DD: Previously Finalized Quality Measures with Substantive Changes Proposed for Partial Removal as Component Measures in Traditional MIPS and Proposed for Retention for Use in Relevant MVPs for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

As noted under Table Group CC of this Appendix, beginning with the CY 2024 performance period/2026 MIPS payment year and future years, we propose to maintain measures Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan for MIPS Value Pathways (MVP) development, and maintain measures Q112 and Q113 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.2.c.(2) of this proposed rule. These measures have proposed substantive changes under Table Group DD and Table Group E of this Appendix.

Note: Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE # / eCQM CBE #.

The DD Tables within this proposed rule provide the substantive changes proposed for the quality measures in CY 2024. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2024 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2024 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2025. The 2023 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2024 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2024 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, would the DD table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: For the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface measures as a collection type is only available for APM Entities, specifically Shared Savings Program ACOs reporting through the APP (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS). Thus, the CMS Web Interface collection type is not listed in any table under Table Group DD of this Appendix. For further information regarding the Shared Savings Program requirements under the APP and the CMS Web Interface collection type available under the APP, see section III.G.2.c.(2) of this proposed rule. For information regarding proposed changes to the CMS Web Interface measures for the CY 2024 performance period/2026 MIPS payment year, see Table Group E of this Appendix.

We request comments on these substantive changes.

DD.1 Breast Cancer Screening

Category	Description
CBE # / eCQM CBE #:	2372 / N/A
Quality #:	112
CMS eCQM ID:	CMS125v12
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	<p>Updated measure description: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Patient age to 40 – 74.</p> <p>Updated denominator: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Patient age to 41 – 74.</p> <p>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised: Patient age to 41 – 74.</p> <p>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore would align with intent of the measure to exclude patients with this condition from the measure.</p> <p>Additionally, we propose to update the denominator eligible age criteria for this measure to align with the May 2023 draft recommendation statement issued by the USPSTF.⁴⁵⁵</p>

⁴⁵⁵ USPSTF (2023). Task Force Issues Draft Recommendation Statement on Screening for Breast Cancer. https://www.uspreventiveservicestaskforce.org/uspstf/sites/default/files/file/supporting_documents/breast-cancer-screening-draft-rec-bulletin.pdf.

DD.2 Colorectal Cancer Screening

Category	Description
CBE # / eCQM CBE #:	0034 / N/A
Quality #:	113
CMS eCQM ID:	CMS130v12
Current Collection Type:	Medicare Part B Claims Measure Specifications eCQM Specifications MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore would align with intent of the measure to exclude patients with this condition from the measure.

Table Group E: Previously Finalized CMS Web Interface Quality Measures with Substantive Changes Proposed for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

The E Tables within this proposed rule provide the substantive changes proposed for the CMS Web Interface quality measures in CY 2024. It should be noted that for the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface as a collection type is only available for APM Entities, specifically Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting through the APM Performance Pathway (APP) (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS).

The changes that are made to the code sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2024 may not be identified within the proposed rule due to the availability of these changes to the public. The 2024 CMS Web Interface Measure Coding Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to stakeholders. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2024 CMS Web Interface Measure Coding Release Notes once posted to review all coding changes.

The 2024 eCQM collection type measures had substantive changes that could prove burdensome to collect, therefore, the CMS Web Interface specifications will align with the 2024 MIPS CQMs specifications changes for these measures.

The tables below contain proposed changes for performance year 2024 CMS Web Interface measure specifications to be used in the Shared Savings Program for quality reporting. Note: there are substantive changes proposed for 9 of the 10 CMS Web Interface measures.

E.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
CBE #	0059
Quality #:	001 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	DM-2
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	Updated denominator exclusion: Added: Dementia combinations: Donepezil-memantine to the list of dementia medication exclusion medications.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.

E.2 Preventive Care and Screening: Influenza Immunization

Category	Description
CBE #	0041
Quality #:	110 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	PREV-7
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	Updated denominator exclusion criteria: Added: Anaphylaxis due to the vaccine on or before the measurement period.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator exclusion by adding an exclusion for patients who experienced anaphylaxis due to the vaccine. While anaphylaxis due to the flu vaccine is rare, patients who have previously experienced a severe allergic reaction due to the influenza vaccine, regardless of the component suspected of being responsible for the reaction, shouldn't receive additional doses of the vaccine (https://www.cdc.gov/flu/prevent/egg-allergies.htm#:~:text=A%20person%20who%20has%20previously,ge%20a%20flu%20vaccine%20again).

E.3 Breast Cancer Screening

Category	Description
CBE #	2372
Quality #:	112 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	PREV-5
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	<p>Updated measure description: Revised: Patient age to 40 – 74.</p> <p>Updated denominator: Revised: Patient age to 41 – 74.</p> <p>Updated initial population: Revised: Patient age to 41 – 74.</p> <p>Updated denominator exclusion: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p> <p>Additionally, we propose to update the denominator eligible age criteria for this measure to align with the May 2023 draft recommendation statement issued by the USPSTF for breast cancer screening.⁴⁵⁶</p>

⁴⁵⁶ USPSTF (2023). Task Force Issues Draft Recommendation Statement on Screening for Breast Cancer. https://www.uspreventiveservicestaskforce.org/uspstf/sites/default/files/file/supporting_documents/breast-cancer-screening-draft-rec-bulletin.pdf.

E.4 Colorectal Cancer Screening

Category	Description
CBE #	0034
Quality #:	113 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface:	PREV-6
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	Updated denominator exclusion: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.

E.5 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
CBE #	N/A
Quality #:	134 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	PREV-12
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.
Substantive Change:	<p>Updated guidance: Revised: The intent of the measure is to screen for new cases of depression in patients who have never had a diagnosis of bipolar disorder prior to the qualifying encounter used to evaluate the numerator. Patients who have ever been diagnosed with bipolar disorder will be excluded from the measure.</p> <p>Updated denominator exclusion: Removed: Diagnosis of depression from the denominator exclusion.</p> <p>Updated denominator criteria: Added: coding for qualifying encounters for nutritionists/dieticians and home-based health care.</p>
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to revise the denominator exclusion and applicable measure guidance to remove a previous diagnosis of depression as an exclusion, as patients with a history of depression clinically may require more frequent monitoring and ongoing treatment for reoccurrence of symptoms.</p> <p>We propose to update the denominator to include encounter codes for nutritionists and dieticians, as well as home-based encounter codes, as it is clinically appropriate to conduct depression screenings during these encounters.</p>

E.6 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
CBE #	0028
Quality #:	226 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	PREV-10
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of patients aged 18 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients aged 12 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 12 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 12 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.</p> <p>The initial population is revised to read: All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose revisions to this measure to lower the denominator eligible age to 12 years and older to allow for the inclusion of adolescents into the measure's denominator. Lowering the denominator eligible age aligns with proposed changes for all other collection types, which combine the patient population within measure Q402: Tobacco Use and Help with Quitting Among Adolescents with that of measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention resulting in a single, more robust measure.

E.7 Controlling High Blood Pressure

Category	Description
CBE #	N/A
Quality #:	236 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	HTN-2
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	<p>The measure initial patient population is revised to read: Patients 18-85 years of age who had a visit during the measurement period and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p> <p>Updated denominator exclusion: Added: Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p> <p>Updated guidance: Revised: In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician’s responsibility and discretion to confirm the automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient’s medical record.</p> <p>Updated numerator note: Revised: In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician’s responsibility and discretion to confirm automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient’s medical record.</p>
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We propose to revise the initial patient population to specify the patient visit must occur during the measurement period. This revision provides clarification of the encounter timing.</p> <p>Additionally, we propose to update the denominator exclusion to include Donepezil-memantine in the list of dementia medication list, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p> <p>We propose to revise the measure guidance and the numerator note around remote monitoring devices for capturing blood pressure readings. Currently, the measure allows patient reported data using most methods of digital collection/reporting and prohibits patient reported data taken with non-digital devices, such as with a manual blood pressure cuff and stethoscope. The measure is agnostic to how the reading gets in and the documentation practice of each office; therefore, whether patient is “conveying the reading to the clinician” by manually entering the BP reading (for example, patient portal) or having the device auto-transmit data directly, it is the clinician’s responsibility and discretion to confirm that the automated blood pressure monitor used to obtain the blood pressure is considered acceptable and reliable.</p>

E.8 Depression Remission at Twelve Months

Category	Description
CBE #	0710
Quality #:	370 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	MH-1
Current Collection Type:	CMS Web Interface
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event.
Substantive Change:	Updated denominator exclusion: Removed: Exclusion for patients who were permanent nursing home residents during the denominator identification period or the measure assessment period.
Measure Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to remove the denominator exclusion related to patients who were permanent nursing home residents. This component has an extremely low rate of use, demonstrating that it's not a meaningful exclusion for the measure.

E.9 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
CBE #	N/A
Quality #:	438 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
CMS Web Interface ID:	PREV-13
Current Collection Type:	CMS Web Interface
Current Measure Description:	Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: *All patients who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR *Patients aged ≥ 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR *Patients aged 40-75 years with a diagnosis of diabetes
Substantive Change:	<p>The measure description is revised to read: Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> • All patients who were previously diagnosed with or currently have a diagnosis clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR • Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR • Patients aged 40 to 75 years with a diagnosis of diabetes; OR • Patients aged 40 to 75 with a 10-year ASCVD risk score of ≥ 20 percent. <p>Updated denominator guidance: Revised: Denominator Population Guidance: The denominator population covers four distinct populations. There is only one performance rate calculated for this measure. Use the following process to prevent counting patients more than once.</p> <p>Denominator Population 1: All patients who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure before the end of the measurement period If YES, patient meets Denominator Population 1 risk category If NO, screen for next risk category</p> <p>Denominator Population 2: Patients aged 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia If YES, patient meets Denominator Population 2 risk category If NO, screen for next risk category</p> <p>Denominator Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with a diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period If YES, patient meets Denominator Population 3 risk category If NO, screen for next risk category</p> <p>Denominator Population 4: Patients aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of ≥ 20 percent during the measurement period If YES, patient meets Denominator Population 4 risk category If NO, patient does NOT meet denominator criteria and is NOT eligible for measure inclusion.</p>

Category	Description
	<p>Added: For Denominator Population Guidance for Encounter: To meet Denominator Population 4: There is no LDL-C result required.</p> <p>Removed: For Denominator Population Guidance for Encounter: Lifestyle modification coaching: A healthy lifestyle is important for the prevention of cardiovascular disease. However, lifestyle modification monitoring and documentation added too much complexity to allow its inclusion in the measure at this time.</p> <p>The initial population is revised to read: Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD or ever had, including an ASCVD procedure. Population 2: Patients aged 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C \geq 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes. Population 4: Patients aged 40 to 75 at the beginning of the measurement period with a 10-year ASCVD risk score of \geq 20 percent</p> <p>Updated denominator: Revised: Population 2: Patients aged 20 to 75 years at the beginning of the measurement period who have ever had laboratory result of LDL-C \geq 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia Added: Population 4: Patients aged 40 to 75 at the beginning of the performance period with a 10-year ASCVD risk score of \geq 20 percent during the performance period.</p> <p>Updated numerator definition: Added: 10 Year Risk Assessment - The 10-year ASCVD risk score is calculated using the Pooled Cohort Equations: 1) the 2013 ACC/AHA ASCVD Risk Estimator OR 2) the ACC Risk Estimator Plus. If your EHR does not have either of these risk calculators, we recommend that you use the on-line versions. The 10-year ASCVD risk assessment must be performed during the measurement period</p> <p>Updated submission guidance: Revised: DENOMINATOR CONFIRMATION, POPULATION 2</p> <ul style="list-style-type: none"> o Determine if the patient is aged 20 to 75 years at the beginning of the measurement period AND has ever had a laboratory result of LDL-C \geq 190 mg/dL OR were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia <ul style="list-style-type: none"> o If the patient is 20 to 75 years at the beginning of the measurement period AND has ever had a laboratory result of LDL-C \geq 190 mg/dL documented OR were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia select "Yes" OR o If the patient is not 20 to 75 years at the beginning of the measurement period OR has never had a laboratory result of LDL-C \geq 190 mg/dL AND has never been previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia documented select "No – Diagnosis" <p>Added: DENOMINATOR CONFIRMATION, POPULATION 4</p> <ul style="list-style-type: none"> o Determine if the patient is aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of \geq 20 percent during the measurement period <ul style="list-style-type: none"> o If the patient is aged 40-75 years at the beginning of the measurement period with a 10-year ASCVD risk score of \geq 20 percent during the measurement period select "Yes" OR o If the patient is not aged 40 to 75 years at the beginning of the measurement period or does not have a 10-year ASCVD risk score of \geq 20 percent during the measurement period select "No – Risk Assessment" OR o If there is a denominator exclusion for patient disqualification from the measure select "Denominator Exclusion" OR o If there is an "other" CMS approved reason for patient disqualification from the measure select "No- Other CMS Approved Reason"
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose revisions to this measure that would allow it to align more closely with the 2019 ACC/AHA Guideline on the Primary Prevention of Cardiovascular Disease: A Report of the American College of Cardiology/American Heart Association Task Force on

Category	Description
	Clinical Practice Guidelines. ⁴⁵⁷ We propose to update submission criteria 2 to reflect a cap in the age denominator criteria to 75. The ACC/AHA 2018 cholesterol guidelines state that in adults older than 75 years with diabetes mellitus, it may be reasonable to initiate statin therapy after a clinician–patient discussion of potential benefits and risks for prevention of ASCVD events. ⁴⁵⁸ Additionally we propose to add submission criteria 4, which specifically assesses statin use for patients that have a 10-year ASCVD risk score of > 20 percent. Patients that meet this denominator criteria would be considered high risk and based on the guidelines, should be strongly recommended statin therapy solely based on risk alone and after a clinician patient risk discussion. ⁴⁵⁹ Furthermore, we propose to update the description and measure instructions to clearly communicate the changes within submission criteria one and the inclusion of a submission criteria 4.

APPENDIX 2: IMPROVEMENT ACTIVITIES

NOTE: In this proposed rule, for the CY 2024 performance period/2026 MIPS payment year and future years, we are proposing to add five new improvement activities, modify one previously adopted improvement activity, and remove three previously adopted improvement activities. These proposals are discussed in section IV.A.4.f. of this proposed rule and in more detail below. We request comment on our proposals.

Table A: New Improvement Activities for the CY 2024 Performance Period/2026 MIPS Payment Year and for Future Years

New Improvement Activity	
Proposed Activity ID:	IA_PM_XX
Proposed Subcategory:	Population Management
Proposed Activity Title:	Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
Proposed Activity Description:	Establish policies and procedures to improve practice capacity to increase HIV prevention screening, improve HIV prevention education and awareness, and reduce disparities in pre-exposure prophylaxis (PrEP) uptake. Use one or more of the following activities: <ul style="list-style-type: none"> • Implement electronic health record (EHR) prompts or clinical decision support tools to increase appropriate HIV prevention screening; • Require that providers and designated clinical staff take part in at least one educational opportunity that includes components on the importance and application of HIV prevention screening and PrEP initiation in clinical practice; and/or • Assess and refine current policies for HIV prevention screening, including integrated sexually transmitted infection (STI)/HIV testing processes, universal HIV screening, and PrEP initiation.
Proposed Weighting:	Medium
Rationale:	The Centers for Disease Control and Prevention (CDC) estimates that nearly 1.2 million Americans are living with HIV and that nearly one in eight are not aware that they are infected. ^{10,11} Social determinants of health (SDOH) factors, including low socioeconomic status, living in poverty, lack of transportation to care services, low health literacy levels

⁴⁵⁷ Arnett, D. K., Blumenthal, R. S., Albert, M. A., Buroker, A. B., Goldberger, Z. D., Hahn, E. J., Himmelfarb, C. D., Khera, A., Lloyd-Jones, D., McEvoy, J. W., Michos, E. D., Miedema, M. D., Muñoz, D., Smith, S. C., Jr, Virani, S. S., Williams, K. A., Sr, Yeboah, J., & Ziaecian, B. (2019). 2019 ACC/AHA Guideline on the Primary Prevention of Cardiovascular Disease: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines. *Circulation*, 140(11), e596–e646. <https://doi.org/10.1161/CIR.0000000000000678>.

Statin Therapy in Older Adults for Primary Prevention of Atherosclerotic Cardiovascular Disease: The Balancing Act. <https://www.acc.org/latest-in-cardiology/articles/2020/10/01/11/39/statin-therapy-in-older-adults-for-primary-prevention-of-atherosclerotic-cv-disease>.

⁴⁵⁹ Arps, K., Blumenthal, R., & Martin, S. (2018, November 15). New Aspects of the Risk Assessment Guidelines, Scientific Evidence and Future Goals. <https://www.acc.org/latest-in-cardiology/articles/2018/11/14/07/10/new-aspects-of-the-risk-assessment-guidelines>.

	<p>to complete medical forms, homelessness, and intimate partner violence can lead to limitations in seeking preventive measures, including accessing healthcare providers or HIV testing sites.⁴⁰</p> <p>The CDC recommends that all individuals between the ages of 13 and 64 get tested for HIV at least once as part of routine healthcare.¹³ Individuals at greater risk, including gay, bisexual, and other men who have sex with men (MSM), and persons who inject drugs, are recommended for more frequent, annual HIV screening.^{12,13} The CDC also recommends that all sexually active adult and adolescent patients should receive information about HIV pre-exposure prophylaxis (PrEP), and recommends PrEP as an effective HIV prevention strategy.¹⁴ Taking PrEP as prescribed reduces the risk of transmitting HIV through sexual contact by about 99 percent, and limits the risk of acquiring HIV by at least 74 percent among people who inject drugs.¹⁴</p> <p>Lack of HIV preventive care and referrals among vulnerable populations in the U.S. leads to inequities in access to HIV prevention treatment.^{30,36} One study reported that fewer Black, Hispanic, or Latino people who tested negative for HIV and were eligible for PrEP received a referral for treatment as compared with other racial and ethnic groups.³⁶ Among both males and females, Black and Hispanic people have far lower PrEP uptake rates relative to their risk than do White males, a disparity that is starkest among Black males.²⁹ Despite MSM representing the highest proportion of Americans diagnosed with HIV, lack of awareness and understanding of PrEP has led to low rates of PrEP use among this group; in one study conducted among Black/African American and white PrEP-eligible MSM, 61 percent were aware of PrEP, but only 9 percent used it.³⁶ In another study conducted among Black/African American MSM, PrEP awareness was 39 percent, but actual use was less than 5 percent.³⁶ Barriers to PrEP uptake have contributed to low rates of use, with more than one-half of PrEP-eligible MSM being reported as failing to reach the contemplation stage (for example, willing and self-identified as appropriate candidates) of PrEP adoption.³⁴ Implementation of an electronic HIV screening alert almost doubled the rates of universal HIV screening in one study of primary care providers in a Midwestern practice and this implementation also reduced racial disparities in care.³⁸ Provider knowledge about PrEP was associated with both past and potential future initiation of PrEP, and an observed greater willingness to prescribe PrEP was associated with higher PrEP knowledge.⁷ HIV diagnoses in MSM in New South Wales, Australia, declined from 295 (cases) in the 12 months before PrEP roll-out to 221 (cases) in the 12 months after roll-out. Grulich and colleagues (2018) also observed a decline both in recent HIV infections (from 149 cases to 102) and in other HIV-related diagnoses.²⁷</p> <p>This HIV prevention-focused activity, including clinician education, will help to narrow gaps and inequities in care related to HIV prevention in clinical practice, and that it will highlight HIV prevention guidelines, including recommendations to enhance prevention screening and PrEP awareness and use.</p> <p>We propose weighting this activity medium, because this activity may be accomplished by establishing or refining policies and procedures to improve practice capacity to increase HIV prevention screening and linkage to appropriate prevention resources. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 and 59781).</p>
New Improvement Activity	
Proposed Activity ID:	IA_MVP
Proposed Subcategory:	N/A
Proposed Activity Title:	Practice-Wide Quality Improvement in MIPS Value Pathways
Proposed Activity Description:	Create a quality improvement initiative within your practice and create a culture in which all staff actively participates. Clinicians must be participating in MIPS Value Pathways (MVPs) to attest to this activity.

	<p>Create a quality improvement plan that involves a minimum of three of the measures within a specific MVP and that is characterized by the following:</p> <ul style="list-style-type: none"> • Train all staff in quality improvement methods, particularly as related to other quality initiatives currently underway in the practice; • Promote transparency and accelerate improvement by sharing practice-level and panel-level quality of care and patient experience and utilization data with staff; • Integrate practice change/quality improvement into all staff duties, including communication and education regarding all current quality initiatives; • Designate regular team meetings to review data and plan improvement cycles with defined, iterative goals as appropriate; or • Promote transparency and engage patients and families by sharing practice-level quality of care and patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data. <p>In addition, clinicians may consider:</p> <ul style="list-style-type: none"> • Creation of specific plans for recognition of individual or groups of clinicians and staff when they meet certain practice-defined quality goals. Examples include recognition for achieving success in measure reporting and/or a high level of effort directed to quality improvement and practice standardization; and • Participation in the American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.
Proposed Weighting:	High
Rationale:	<p>Clinical practice quality improvement (QI) activities are commonly limited to staff members directly involved in the performance of the specific activity. Creating a culture of QI among all staff working as a team drives outcomes more effectively than when the work is done in isolation. This collaborative approach allows for a more comprehensive view of QI goals and, in turn, the development of most efficient and effective initiatives. Additionally, the positive and unpredictable ideas that come from a high-functioning collaborative team can be crucial to achieving QI that is most meaningful to both patients and providers.</p> <p>Creating coordination between the goals of this activity and the goals of the measures within an MVP will create an intuitive focus within a specific clinical area, which will allow clinicians and other staff members to be most productive in their QI efforts. This coordinated clinical focus is likely to lessen the perceived burden of MIPS and MVP while the effort required will still be sufficiently high.</p> <p>Team-based quality improvement approaches have been found to be highly effective in healthcare.^{18,32}</p> <p>In addition, this activity will incentivize voluntary MVP adoption, which will drive clinician accountability and quality improvement on factors that are more relevant to their practice. For a discussion of the benefits of MVPs, please see the 2021 PFS final rule (85 FR 84844 through 84846).</p> <p>We propose making this activity high-weighted because MIPS eligible clinicians will need considerable time and resources to implement practice-wide quality improvement via MVPs. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 and 59781).</p> <p>While this MVP-only activity could appear duplicative on the surface, this MVP activity specifically defines the nature of the QI project that clinicians must complete, and it is particular to the measures they are reporting on in the MVP they have chosen. We are requiring clinicians complete the project focused on three separate measures. In contrast, IA_PSPA_19 requires only a focused single improvement. This is consistent with the work that clinicians will need to complete to be successful with MVPs.</p>
New Improvement Activity	
Proposed Activity ID:	IA_PM_XX

Proposed Subcategory:	Population Management
Proposed Activity Title:	Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines
Proposed Activity Description:	<p>Incorporate the Cervical Cancer Screening and Management (CCSM) Clinical Decision Support (CDS) tool within the electronic health record (EHR) system to provide clinicians with ready access to and assisted interpretation of the most up-to-date clinical practice guidelines in CCSM to ensure adequate screening, timely follow-up, and optimal patient care.</p> <p>The CCSM CDS helps ensure that patient populations receive adequate screening and management, according to evidence-based recommendations in the United States Preventive Services Task Force (USPSTF) screening and American Society for Colposcopy and Cervical Pathology (ASCCP) management guidelines for cervical cancer. The CDS integrates into the clinical workflow a clinician-facing dashboard to support the clinician’s awareness and adoption of and preventive care for cervical cancer, including screening and any necessary follow-up treatment.</p> <p>The CCSM CDS is fully conformant with the HL7 Fast Healthcare Interoperability Resources (FHIR) standard, so it can be used with any certified EHR platform. The CDS Hooks and SMART-on-FHIR interoperability interface standards provide two ways to integrate with the clinical workflow in a way that complements existing displays and information pre-visit, during visit, and for post-visit follow-up. CCSM CDS helps the clinician evaluate the patient’s clinical data against existing guidance and displays patient-specific recommendations.</p>
Proposed Weighting:	High
Rationale:	<p>Cervical cancer is largely a disease of health inequity, with higher rates among lower socio-economic groups, immigrant populations, and women in rural settings.²² Cervical cancer is highly preventable when precancerous lesions are detected early and appropriately managed.⁵³ However, the complexity of and frequent updates to existing evidence-based clinical guidelines make it challenging for clinicians to stay abreast of the latest recommendations.⁵³ In addition, limited availability of and accessibility to CDS make it difficult for groups who are medically underserved to receive screening and/or appropriate follow-up care.</p> <p>The CCSM CDS is one solution to help improve cervical cancer outcomes. The CCSM CDS provides clinical guidelines in a shareable, structured, and computer-interpretable format to facilitate meaningful improvements in the number of patients screened and treated for cervical precancer. This includes addressing current gaps in screening uptake and timely follow-up care among populations that are often medically underserved.²² Analysis of data collected from 1,037 Federally Qualified Health Centers from 2016 to 2021 by the Health Resources and Services Administration (HRSA) Uniform Data System (UDS) found that only about 50 percent of women received recommended cervical cancer screening.¹⁶ Additionally, National Quality Assurance Committee (NCQA) Healthcare Effectiveness and Data Information Set (HEDIS) measures of cervical cancer screening rates show that Medicaid HMOs have rates at least 10% lower than Commercial HMOs.⁴²</p> <p>The CDC-developed CCSM CDS tool has been developed in a standards-based, EHR-agnostic way.^{21,44} The CDS tools are designed to help clinicians more efficiently evaluate patient clinical data against CCSM guidance and display patient-specific recommendations. This reduces the manual workload of monitoring patients who need screening and potential follow-up. Evidence suggests that clinician adherence to the CCSM guidelines can assist clinicians in improving screening and management outcomes and address existing disparities in guideline concordant care.⁴⁶</p> <p>This activity will leverage the convenience and efficiency of more sophisticated, standards-based decision support tooling to assist clinicians in applying complex data-driven guidelines.²¹ This CCDS CDS can help provide optimal care and better</p>

	<p>engagement with diverse patient populations, including historically underserved populations.^{22,53,16,42}</p> <p>We propose weighting this activity high, because this activity will require integrating the CCSM CDS tool into clinicians'/practices' EHR dashboards, learning how to use it, and then using it. See the definition of high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
New Improvement Activity	
Proposed Activity ID:	IA_BMH_XX
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women
Proposed Activity Description:	Screen for perinatal mood and anxiety disorders (PMADs) and substance use disorder (SUD) in pregnant and postpartum women, and screen and refer to treatment and/or refer to appropriate social services, and document this in-patient care plans.
Proposed Weighting:	High
Rationale:	<p>As many as one in five women are affected by perinatal mood and anxiety disorders (PMADs) in their lifetimes^{23,24} yet studies estimate that between 50-80 percent of women are not screened during the prenatal or postpartum periods.⁶ This highlights barriers to receiving behavioral healthcare in the perinatal period, such as stigma in receiving mental health care, lack of awareness about the prevalence of PMADs, and limited access to affordable behavioral health services.⁵¹ Though all women can experience PMADs, those that are particularly vulnerable include historically underserved racial and ethnic populations, those with lower socioeconomic status, and younger mothers.⁵¹</p> <p>Research has demonstrated a link between untreated PMADs and maternal SUD^{3,33,39,43} While there are limited data estimating the prevalence of maternal SUD, opioid use among perinatal women quadrupled between 1998 and 2014, leading to an increase in infants born with Neonatal Abstinence Syndrome (NAS)^{2,3}. Methamphetamine and marijuana use among pregnant and postpartum women has also increased.^{1,62} The largest disparity in maternal SUD, particularly opioid use disorder, is seen among mothers living in rural areas⁶¹ Increased costs associated with maternal SUD, particularly for infants born with NAS was estimated at approximately \$93,400 per infant in 2012.⁴³</p> <p>While the effects of untreated PMADs and maternal SUD can lead to increased severity of PMADs (including risk of maternal suicide), initiation or increased substance use behaviors, and pregnancy complications,^{5,19} the implications extend beyond mothers. Infants and children can also be impacted by lower rates of mother/infant bonding, breastfeeding, safe sleep and other infant safety practices, and other activities impacting neurodevelopment.^{8,51} Infants, children, and partners of mothers who experience PMADs are also more likely to experience a depressive disorder.^{35,51} Furthermore, prevalence of maternal substance use disorders is associated with increased number of children entering the foster system and increased risk of substance use among these children.^{51,54}</p> <p>Rates of screening for PMADs and maternal SUD greatly vary during pregnancy and postpartum.⁶ The American College of Obstetricians and Gynecologists (ACOG) recommends that all perinatal women be screened for PMADs, and referred for services upon positive screen.² The American Academy of Pediatrics recommends that pediatricians routinely screen mothers of patients for postpartum depression at the one-, two-, four- and six-month well child visits.¹⁷ The U.S. Preventive Services Task Force also recommends that clinicians provide or refer pregnant and postpartum persons who are at increased risk of perinatal depression to counseling interventions and has determined that doing so provides improved outcomes for those at increased risk.^{4,7}</p>

	<p>There are several prominent guidelines for screening and treating substance use disorder in pregnant women, including the Substance Abuse and Mental Health Services Administration Clinical Guidance for Treating Pregnant and Parenting Women with Opioid Use Disorder and their Infants.⁴⁵ The Biden-Harris Administration has also released the National Drug Control Strategy and Substance Use in Pregnancy: Improving Outcomes for Families plan that outlines key steps to “explore, identify barriers, and establish policy to help pregnant women with substance use disorder (SUD) obtain prenatal care and addiction treatment without fear of child removal.”^{56,57,58,59} Many of these guidelines describe the need for routine verbal screenings to reduce bias and discrimination in those who are screened using specimens.²⁵</p> <p>We propose making this activity high-weighted, because MIPS-eligible clinicians will need considerable time and resources to implement the requirements for this activity to train providers on appropriate screening practices, integrate screenings into clinical workflow, and establish a mechanism for referring, linking, and following up with patients upon positive screen. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
New Improvement Activity	
Proposed Activity ID:	IA_BMH_XX
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
Proposed Activity Description:	Complete age-appropriate screening for mental health and substance use in older adults, as well as screening and referral to treatment and/or referral to appropriate social services, and document this in-patient care plans.
Proposed Weighting:	High
Rationale:	<p>Social isolation in the elderly is associated with depression; anxiety; cognitive decline; physical disabilities; lower self-ratings of health; and premature mortality from all causes.^{19,26,41,54} Nearly one-quarter (24 percent) of Americans aged 65 and older living in the community are considered to be socially isolated, and a sizable proportion of adults in the US report feeling lonely (35 percent of adults aged 45 and older and 43 percent of adults aged 60 and older).³⁴ Also, unhealthy alcohol use and use of other drugs has been increasing rapidly among older adults.^{37,63}</p> <p>The Substance Abuse and Mental Health Services Administration (SAMHSA), the American Society of Addiction Medicine (ASAM), and the American Psychiatric Association (APA) all recommend routine screening for mental health and substance use issues in elders to identify ongoing concerns or patients at risk for future issues.³⁹ Many mental health screening tools available for the general adult population, such as the Patient Health Questionnaire (PHQ-9) depression screener and the Generalized Anxiety Disorder 7-item scale (GAD-7), are appropriate for older adults.³⁸ The APA recommends that “older individuals be referred to treatment settings that offer age-appropriate group therapy and non-confrontational individual therapy focusing on late-life issues of loss and sources of social support. Older adults also deserve to receive full consideration for the potential benefits of medication management for substance use disorders.”²⁴</p> <p>We propose making this activity high-weighted, because MIPS eligible clinicians will need considerable time and resources to implement the requirements for this activity. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>

Table B: Changes to Previously Adopted Improvement Activities for the CY 2024 Performance Period/2026 MIPS Payment Year and for Future Years

In this rule, we propose to modify one previously finalized improvement activity for the CY 2024 performance period/2026 MIPS payment year and future years.

Current Improvement Activity	
Current Activity ID:	IA PSPA 16
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use of Decision Support and Standardized Treatment Protocols
Current Activity Description:	Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs.
Current Weighting:	Medium
Proposed Change and Rationale:	We are proposing to modify this activity’s description, “Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs,” and its validation criteria to explicitly promote the use of clinical decision support (CDS), particularly open-source, freely available, interoperable CDS. “Moving the needle” to make progress toward interoperability continues to be an essential Federal goal, as demonstrated by new rules that the Office of the National Coordinator for Health Information Technology (ONC) announced on April 11, 2023, that it will be proposing for Cures Act implementation. ¹ The urgent importance of interoperability is noted on the HealthIT.gov website: “Interoperability helps clinicians deliver safe, effective, patient-centered care. It also provides new ways for individuals and caregivers to access electronic health information to manage and coordinate care. Advancing interoperability is now an essential part of most health care activities ranging from health equity to public health emergency response.” ²
Proposed Revised Activity Title:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs.
Proposed Revised Activity Description:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs. Clinicians should focus on utilizing open-source, freely available, interoperable CDS in completing the requirements of this activity.

TABLE C: Improvement Activities Proposed for Removal for the CY 2024 Performance Period/2026 MIPS Payment Year and for Future Years

In this rule, we propose to remove three previously finalized improvement activities from the CY 2024 performance period/2026 MIPS payment year and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

Current Improvement Activity	
Current Activity ID:	IA_BMH_6
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Implementation of co-location PCP and MH services
Current Activity Description:	Integration facilitation and promotion of the colocation of mental health and substance use disorder services in primary and/or non-primary clinical care settings.
Current Weighting:	Medium
Removal Rationale:	<p>We propose to remove this activity under removal factor two, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice, and factor three, activity does not align with current clinical guidelines or practice. We have received interested-party feedback expressing concern that this activity is out-of-date, and that IA_BMH_6 substantially overlaps with IA_BMH_7 (Implementation of Integrated Patient Centered Behavioral Health Model). IA_BMH_7 better aligns with evidence supporting improved patient outcomes.¹ Furthermore, IA_BMH_6 focuses on co-location of mental health and substance use disorder services in primary and/or non-primary clinical care settings, which has not been found to consistently improve patient outcomes.²</p> <p>In the current rulemaking cycle, we are proposing two new activities in the Behavioral and Mental Health subcategory. We note that the removal of IA_BMH_6 is being proposed in order to ensure that the improvement activities Inventory best reflects current clinical practice, and in no way reflects a de-emphasis of the ongoing priority CMS is placing on behavioral and mental health in general, and on substance use disorder in particular.</p>
Current Improvement Activity	
Current Activity ID:	IA_BMH_13
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Obtain or Renew an Approved Waiver for Provision of Buprenorphine as Medication-Assisted Treatment for Opioid Use Disorder
Current Activity Description:	Complete any required training and obtain or renew an approved waiver for provision of medication-assisted treatment of opioid use disorders using buprenorphine. Note: This activity may be selected once for low-capacity waivers, as these do not expire, and once every 3 years for the expanded waiver, in keeping with renewal requirements.
Current Weighting:	Medium
Removal Rationale:	<p>We propose to remove this activity under removal factor three, activity does not align with current clinical guidelines or practice. In late December 2022, the end of the "X-waiver" was announced, so doctors/nurse practitioners no longer need to complete training and obtain a waiver from the Drug Enforcement Administration (DEA) to be able to prescribe buprenorphine (medication-assisted treatment; MAT). Section 1262 of the Consolidated Appropriations Act of 2023 (also referred to as the "Omnibus Bill") was passed in December 2022.³</p> <p>We note that the removal of IA_BMH_13 is being proposed in order to ensure that the improvement activities Inventory best reflects current clinical practice, and in no way reflects a de-emphasis of the ongoing priority CMS is placing on behavioral and mental health in general, and on substance use disorder in particular. This removal is necessary as the X-waiver is no longer a requirement of MAT prescribing.</p>
Current Improvement Activity	
Current Activity ID:	IA_PSPA_29

Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Consulting Appropriate Use Criteria (AUC) Using Clinical Decision Support when Ordering Advanced Diagnostic Imaging
Current Activity Description:	Clinicians attest that they are consulting specified applicable AUC through a qualified clinical decision support mechanism for all applicable imaging services furnished in an applicable setting, paid for under an applicable payment system, and ordered on or after January 1, 2018. This activity is for clinicians that are early adopters of the Medicare AUC program (2018 performance year) and for clinicians that begin the Medicare AUC program in future years as specified in our regulation at §414.94. The AUC program is required under section 218 of the Protecting Access to Medicare Act of 2014. Qualified mechanisms will be able to provide a report to the ordering clinician that can be used to assess patterns of image-ordering and improve upon those patterns to ensure that patients are receiving the most appropriate imaging for their individual condition.
Current Weighting:	High
Removal Rationale:	We propose to remove this activity under removal factor seven, improvement activity is “obsolete.” The AUC CDS program has ended, so it will no longer be possible to attest to this activity.

APPENDIX 3: MVP INVENTORY

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains two groups of proposed MVP tables: Group A: proposed new MVPs and Group B: proposed modifications to previously finalized MVPs. Group A includes five new proposed MVPs. Group B includes 12 previously finalized MVPs with proposed modifications.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, each MVP includes a foundational layer that is comprised of population health measures and Promoting Interoperability performance category measures.

MVP Development: Performance Category Sources

The MVP tables below contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures are located in the 2023 MIPS Quality Measures List on the Quality Payment Program website.⁴⁶⁰ In addition, see Appendix 1: MIPS Quality Measures of this proposed rule for proposed modifications to existing quality measures.

⁴⁶⁰ See the 2023 MIPS Quality Measures List: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2217/2023%20MIPS%20Quality%20Measures%20List.xlsx>.

- Existing QCDR measures are based on the most recent publication of the 2023 QCDR Measure Specification file, located on the Quality Payment Program website.⁴⁶¹ We plan to modify the list of 2024 QCDR measures around December 2023.

- Improvement activities are located in the 2023 Improvement Activities Inventory, and the 2023 MIPS Data Validation Criteria are located in the Quality Payment Program website.⁴⁶² In addition, see Appendix 2: Improvement Activities of this proposed rule for any proposed removals, additions, or modifications to existing improvement activities.

- Existing cost measures are located in the 2023 Cost Measures Inventory.⁴⁶³ In addition, see section IV.A.4.f.(2) of this proposed rule for proposals regarding the cost performance category.

- For further details on the population health measures (attributed to the Quality Performance Category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).

- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.⁴⁶⁴ In addition, see section IV.A.4.f.(4) of this proposed rule for proposals regarding the existing Promoting Interoperability performance category measures.

MVP Development: Global Inclusion of a Quality Measure and an Improvement Activity

- Consistent with the priority to advance health equity throughout various CMS programs, including the Quality Payment Program, we are proposing to include Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs. Health equity supports health for all the people served by our programs by designing, implementing, and operationalizing policies and programs that eliminate avoidable differences in health outcomes experienced by people who are disadvantaged or underserved and providing the care and support that beneficiaries need to thrive (<https://www.cms.gov/pillar/health-equity>). The measure supports the process of collecting drivers of health (DOH) data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who choose to submit this measure though it is not required. For further details regarding the basis on which CMS determined Q487: Screening for Social Drivers of Health is appropriate to measure clinician performance as well as how it does so, see 87 FR 69872 through 69784.

- We are proposing to add a newly proposed improvement activity, IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways, a high weighted activity, to each of the new and previously finalized MVPs. This activity would expand the opportunity for quality improvement (QI) activities across and among practices, ultimately leading to improvements in quality of care and fostering a culture of participation by all staff. In addition, we believe this activity would incentivize voluntary MVP adoption, which is important to the transformation of clinical practice by encouraging practice to participate payment options such as MVPs and APMs that measure performance in ways that are more relevant practice members. See Appendix 2, Improvement Activities: Table A of this proposed rule for detailed information regarding the proposed IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways activity.

MVP Table Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables in the Group A and Group B tables below:

- New quality measures, improvement activities, and cost measures proposed for inclusion in MIPS beginning with the CY 2024 performance period/2026 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1, MIPS Quality Measures: Table Group A of this proposed rule for further information regarding new MIPS measures. See Appendix 2, Improvement Activities: Table A of this proposed rule

⁴⁶¹ See https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2174/2023_QCDR_Measure_Specifications.xlsx for QCDR measures.

⁴⁶² See the 2023 Improvement Activities Inventory: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2237/2023%20Improvement%20Activities%20Inventory.zip> and 2023 MIPS Data Validation Criteria: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2313/2023%20MIPS%20Data%20Validation%20Criteria.zip> for improvement activity details.

⁴⁶³ See the 2023 Cost Measures Inventory: <https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2023>.

⁴⁶⁴ See the 2023 Promoting Interoperability Measure Specifications: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2223/2023%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip> for Promoting Interoperability measure details.

for further information regarding new improvement activities. See section IV.A.4.f.(2) of this proposed rule for further information regarding new cost measures.

- Quality measures, improvement activities, and cost measures that we are proposing to add to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.

- Existing quality measures and improvement activities with proposed revisions are identified with an asterisk (*).

- Quality measures identified with a double asterisk (**) are individual measures duplicating a component of the TBD: Preventive Care and Wellness (composite) measure. The quality measures that include the (**) can only be submitted when included in an MVP. Please see Appendix 1: MIPS Quality Measures Table A.6 of this proposed rule for any additional information regarding the Preventive Care and Wellness (composite) measure.

- Quality measures that are considered high priority (as defined in § 414.1305) are illustrated with an exclamation point (!) and outcome measures (as defined in § 414.1305) are illustrated with a double exclamation point (!!). Further details of these types of measures are located in the CMS Measures Management System Hub.⁴⁶⁵

- QCDR measures proposed in the MVP tables below that are illustrated with a pound sign (#) indicate that testing data is still pending and due on or before September 1, 2023. We refer readers to the CY 2022 PFS final rule for additional details regarding requirements for QCDR measures considered for an MVP (86 FR 65407 through 65408).

- Improvement activities that include a health equity component are illustrated with a tilde (~) within the MVP table.

- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation is illustrated with a percent (%) to indicate that attestation to this improvement activity provides full credit for the improvement activity performance category within an MVP.

In addition, quality measure collection types are identified in parentheses after each quality measure title within each MVP table and improvement activity medium/high weight designations are identified in parentheses after each improvement activity.

⁴⁶⁵ See <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

Group A: New MVPs Proposed for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

A.1 Focusing on Women's Health MVP

The proposed Focusing on Women's Health MVP focuses on the clinical theme of providing treatment and management of women's health. This MVP would be most applicable to clinicians who treat patients within the practice of gynecology, obstetrics, and urogynecology, including nonphysician practitioners (NPPs) such as certified nurse-midwives, nurse practitioners, and physician assistants.

Quality Measures

We propose to include 18 MIPS quality measures and one QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of women's health by assessing three critical areas of care: obstetrics, preventive women's health, and urogynecology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in women's health:

- Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: This MIPS quality measure ensures annual assessment for the presence or absence of urinary incontinence for women.
- Q112: Breast Cancer Screening: This MIPS quality measure ensures women have a mammogram to screen for breast cancer in accordance with clinical guidelines.
 - Q309: Cervical Cancer Screening: This MIPS quality measure assesses for the performance of cervical cancer screening in women in accordance with clinical guidelines.
 - Q310: Chlamydia Screening for Women: This MIPS quality measure identifies women that are sexually active to ensure that they have had at least one test for chlamydia.
 - Q335: Maternity Care: Elective Delivery (Without Medical Indication) at < 39 Weeks (Overuse): This inverse MIPS quality measure identifies patients who have delivered a live singleton at < 39 weeks of gestation and assesses for elective deliveries (without medical indication) by cesarean birth or induction of labor.
 - Q336: Maternity Care: Postpartum Follow-up and Care Coordination: This MIPS quality measure ensures the following postpartum care is completed: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and assurance immunization are reviewed and updated.
 - Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients: This MIPS quality measure currently requires that patients have received a one-time screening for hepatitis C virus (HCV) infection. However, this measure has proposed substantive changes that would require treatment initiation or referral within a set timeframe in addition to screening. Please reference Appendix 1: MIPS Quality Measures: Table D.45 for further information.
 - Q422: Performing Cystoscopy at the Time of Hysterectomy for Pelvic Organ Prolapse to Detect Lower Urinary Tract Injury: This MIPS quality measure evaluates patients that undergo cystoscopy at the time of hysterectomy for pelvic organ prolapse to evaluate for lower urinary tract injury.
 - Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair: This MIPS quality measure evaluates for injury, during or within 30 days, to the bladder after surgery for patients that undergoing pelvic organ prolapse repair.
 - Q448: Appropriate Workup Prior to Endometrial Ablation: This MIPS quality measure ensures endometrial sampling or hysteroscopy with biopsy with results documented prior to an endometrial ablation.
 - Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture: This MIPS quality measure ensures women receive an order for a dual-energy x-ray absorptiometry (DXA) scan if they exhibit select risk factors for osteoporotic fracture.
 - Q475: HIV Screening: This MIPS quality measure ensures patients receive a one-time test for HIV.
 - TBD: CVD Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument: This proposed MIPS quality measure evaluates pregnant or postpartum patients for a completed cardiovascular disease (CVD) risk assessment utilizing a standard instrument.
 - UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level of 25 OH Vitamin D Level Achieved: This MIPS quality measure ensures patients diagnosed with osteopenia or osteoporosis achieve a serum 25 Hydroxy-Vitamin D result greater than or equal to 30.0 ng/dL.

In addition, we are proposing to include the following broadly applicable MIPS quality measures that are relevant to clinicians that specialize in women's health. The quality measures below assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- **Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- **Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** This MIPS quality measure screens patients, aged 18 years and older, for unhealthy alcohol use using a systematic screening method at least once within the last 12 months. If the patient is screened positive for unhealthy alcohol use, then they should receive brief counseling.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- **Q493: Adult Immunization Status:** This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.

Improvement Activities

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We propose to include 14 improvement activities that reflect actions and processes undertaken by clinicians who specialize in women's health, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients being seen for women's health care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_16: Promote Self-management in Usual Care
- IA_BMH_11: Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- IA_BMH_XX: Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_6: Use of toolsets or other resources to close healthcare disparities across communities
- IA_PM_XX: Use of Decision Support to Improve Adherence to Cervical Cancer Screening and Management Guidelines

Cost Measures

We propose to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of women's health. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in women's health and align with other measures and activities within this MVP:

- **Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those providing obstetric and gynecological care.
- **Total Per Capita Cost (TPCC):** This MIPS cost measure captures the overall costs of care after establishing a primary care-type relationship. Obstetricians and gynecologists are included in attribution for the TPCC measure.

Currently, there are no applicable episode-based cost measures available but one could be considered for development in the future.

TABLE A.1: Focusing on Women’s Health MVP

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Focusing on Women’s Health MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

- Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures
- Single asterisk (*): existing quality measures and improvement activities with proposed revisions
- Double asterisk (**): quality measures that are proposed for submission only when included in an MVP
- Single exclamation point (!): quality measures that are considered high priority
- Double exclamation point (!!): outcome measures
- Tilde (~): improvement activities that include a health equity component
- Percent (%): indication that attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category
- Pound sign (#): QCDR measures proposed in this MVP table pending testing data

A.2 Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

The proposed Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on the clinical theme of providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL) and otitis media. This proposed MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, and physician assistants.

Quality Measures

We propose to include eight MIPS quality measures and four QCDR measures within the quality performance category of this MVP, which promote the management and care associated with otolaryngology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with otolaryngology conditions:

- Q277: Sleep Apnea: Severity Assessment at Initial Diagnosis: This MIPS quality measure ensures adults diagnosed with obstructive sleep apnea have an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.
- Q331: Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse): This overuse MIPS quality measure assesses for prescribed antibiotics within 10 days after the onset of symptoms for those patients diagnosed with acute viral sinusitis.
- Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use): This appropriate use MIPS quality measure ensures patients diagnosed with acute bacterial sinusitis are prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
- Q355: Unplanned Reoperation within the 30 Day Postoperative Period: This MIPS quality measure evaluates for an unplanned reoperation within 30 days of a denominator eligible procedure.
- Q357: Surgical Site Infection (SSI): This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.
- AAO16: Age-Related Hearing Loss: Comprehensive Audiometric Evaluation: This MIPS quality measure ensures patients aged 60 years and older who have failed a hearing screening and/or who report suspected hearing loss receive, are ordered, or referred for comprehensive audiometric evaluation.
- AAO20: Tympanostomy Tubes: Comprehensive Audiometric Evaluation: This MIPS quality measure ensures pediatric patients diagnosed with otitis media with effusion (OME) receive tympanostomy tube insertion and a comprehensive audiometric evaluation within 6 months prior to tympanostomy tube insertion.
- AAO21: Otitis Media with Effusion (OME): Comprehensive Audiometric Evaluation for Chronic OME > or = 3 months: This MIPS quality measure ensures pediatric patients diagnosed with otitis media with effusion (OME) including chronic serous, mucoid, or nonsuppurative OME of > or = 3 months duration receive an order or referral for comprehensive audiometric evaluation.
- AAO23: Allergic Rhinitis: Intranasal Corticosteroids or Oral Antihistamines: This MIPS quality measure ensures patients 2 years and older with a diagnosis of allergic rhinitis are prescribed or recommended intranasal corticosteroids (INS) or non-sedating oral antihistamines.

In addition, we are proposing to include the following broadly applicable MIPS quality measures that are relevant to otolaryngology. The quality measures below assess for age specific screenings, and follow-up actions for select measures:

- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients, aged 18 years and older, for a BMI documented with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

Improvement Activities

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in treating patients with otolaryngology conditions, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes

and improve quality of care patients with otolaryngology conditions. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_CC_13: Practice Improvements to Align with OpenNotes Principles
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements

Cost Measures

We propose to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of otolaryngology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the cost measure to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in otolaryngology care and aligns with the other measures and activities within this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including otolaryngologic care. This aligns with the surgical measures within this MVP, including Q355: Unplanned Reoperation within the 30 Day Postoperative Period and Q357: Surgical Site Infection (SSI).

Currently, there are no applicable episode-based cost measures available, but one could be considered for development in the future.

TABLE A.2: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

- Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

A.3 Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

The proposed Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on the clinical theme of promoting quality care for patients suffering from infectious disorders. This proposed MVP would be most applicable to clinicians who treat patients within the practices of infectious disease and immunology, including NPPs such as nurse practitioners and physician assistants.

Quality Measures

We propose to include 14 MIPS quality measures within the quality performance category of this MVP, which focus on a variety of infectious disease conditions that may impact patient health. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures to include in this MVP.

The following quality measures would provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in the prevention and treatment of infectious disorders within their patient population:

- **Q205: HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia, Gonorrhea, and Syphilis:** This MIPS quality measure ensures patients aged 13 years and older with a diagnosis of HIV/AIDS are screened for chlamydia, gonorrhea, and syphilis at least once since the diagnosis of HIV infection.
- **Q310: Chlamydia Screening for Women:** This MIPS quality measure identifies women that are sexually active to ensure that they have had at least one test for chlamydia.
- **Q338: HIV Viral Load Suppression:** This MIPS quality measure ensures all patients with a diagnosis of HIV annually achieve a HIV viral load less than 200 copies/mL at last HIV viral load test.
- **Q340: HIV Medical Visit Frequency:** This MIPS quality measure ensures all patients with a diagnosis of HIV had at least one medical visit in each 6 month period within a 24 month measurement period.
- **Q387: Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users:** This MIPS quality measure ensures all patients that are identified as active injection drug users receive screening for HCV each year.
- **Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients:** This MIPS quality measure currently requires that patients have received a one-time screening for hepatitis C virus (HCV) infection. However, this measure has proposed substantive changes that would require treatment initiation or referral within a set timeframe in addition to screening. Please reference Appendix 1: MIPS Quality Measures: Table D.45 for further information.
- **Q401: Hepatitis C: Screening for Hepatocellular Carcinoma (HCC) in Patients with Cirrhosis:** This MIPS quality measure ensures adult patients with a diagnosis of chronic hepatitis C cirrhosis receive imaging with either ultrasound, contrast enhanced CT or MRI for hepatocellular carcinoma (HCC) at least once each year.
- **Q475: HIV Screening:** This MIPS quality measure ensures patients receive a one-time test for HIV.

In addition, we are proposing to include the following broadly applicable MIPS quality measures that are relevant to infectious disorders. The quality measures below encourage antimicrobial stewardship, medication reconciliation, appropriate immunization receipt and preventive screenings:

- **Q065: Appropriate Treatment for Upper Respiratory Infection (URI):** This appropriate use MIPS quality measure evaluates that patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) did not receive an antibiotic order.
- **Q130: Documentation of Current Medications in the Medical Record:** This MIPS quality measure This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q240: Childhood Immunization Status:** This MIPS quality measure ensures children 2 years of age receive four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- **Q493: Adult Immunization Status:** This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.

Improvement Activities

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We propose to include 14 improvement activities that reflect actions and processes undertaken by clinicians who provide prevention and treatment for infectious disorders to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing infectious disorder care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient’s Medical Record
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_6: Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PM_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA_PM_XX: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- IA_PSPA_23: Completion of CDC Training on Antibiotic Stewardship
- IA_PSPA_32: Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

Cost Measures

We propose to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of infectious disorders. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the cost measure to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in treating infectious disorders and aligns with the other measures and activities within this MVP:

- Total Per Capita Cost (TPCC): This MIPS cost measure captures the overall costs of care after establishing a primary care-type relationship. Infectious Disease specialists are included in attribution for the TPCC measure.

Currently, there are no applicable episode-based cost measures applicable to the clinical topics assessed within other components of this MVP, but one could be considered for development in the future.

TABLE A.3: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

- Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

A.4 Quality Care in Mental Health and Substance Use Disorders MVP

The proposed Quality Care in Mental Health and Substance Use Disorders MVP focuses on the clinical theme of promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This proposed MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, and physician assistants.

Quality Measures

We propose to include 12 MIPS quality measures and 3 QCDR measures within the quality performance category of this MVP, which focus on a variety of behavioral health, including mental health and SUDs that may impact patient health. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP would provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with behavioral health, including mental health and SUDs:

- Q009: Anti-Depressant Medication Management: This MIPS quality measure ensures adult patients diagnosed with major depression treated with antidepressant medication remained on an antidepressant medication treatment. There are two performance rates for this measure that evaluate compliance for at least 84 days or 180 days.
- Q305: Initiation and Engagement of Substance Use Disorder Treatment: This MIPS quality measure ensures patients 13 years of age and older with a new SUD episode have the initiation of intervention or medication within 14 days of the new SUD episode or engage in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication within 34 days of the initiation.
- Q366: Follow-Up Care for Children Prescribed ADHD Medication (ADD): This MIPS quality measure ensures children 6-12 years of age with a newly prescribed a medication for attention-deficit/hyperactivity disorder (ADHD) receive appropriate follow-up care.
- Q370: Depression Remission at Twelve Months: This MIPS quality measure assesses adolescent and adult patients diagnosed with major depression or dysthymia for achieved remission in 12 months (+/- 60 days).
- Q382: Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment: This MIPS quality measure ensures pediatric patients with a diagnosis of major depressive disorder (MDD) receive an assessment for suicide risk.
- Q383: Adherence to Antipsychotic Medications For Individuals with Schizophrenia: This MIPS quality measure assesses an adult patient diagnosed with schizophrenia or schizoaffective disorder prescribed an antipsychotic medication had a Proportion of Days Covered (PDC) of at least 0.8 for their antipsychotic medications.
- Q468: Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): This MIPS quality measure assesses for the continuous treatment (180 days) of pharmacotherapy treatment for adult patients diagnosed with opioid use disorder.
- TBD: Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder: This proposed MIPS quality measure assesses patients diagnosed with mental and/or substance use disorder for maintenance or improvement in functioning at 30 to 180 days after index assessment.
- TBD: Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk: This proposed MIPS quality measure ensures adult patients with suicidal ideation, behavior symptoms or increased suicide risk have a suicide safety plan initiated, reviewed, and/or updated in collaboration between the patient and their clinician.
- TBD: Reduction in Suicidal Ideation or Behavior Symptoms: This proposed MIPS quality measure assesses patients diagnosed with mental and/or substance use disorder with suicidal thoughts, behaviors, or risk symptoms for a reduction in suicidal ideation and/or behavior symptoms within 120 days of index assessment of the Columbia-Suicide Severity Rating Scale (C-SSRS).
- MBHR2: Anxiety Response at 6-months: This MIPS quality measure ensures adult patients with an anxiety disorder demonstrate a response to treatment at 6-months (+/- 60 days).
- MBHR7: Posttraumatic Stress Disorder (PTSD) Outcome Assessment for Adults and Children: This MIPS quality measure ensures patients with a history of a traumatic event and report symptoms consistent with PTSD for at least one month following the traumatic event have a symptom improvement based on a standardized symptom monitor in response to treatment in at least six months.
- MBHR15: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment: This MIPS quality measure ensures patients are referred for evaluation due to concerns for cognitive changes or difficulties receive a standardized valid assessment of cognition with results documented, including documentation of provider's consideration of relevant cultural-linguistic and demographic factors that may have affected assessment and resulting assessment.

In addition, we are proposing to include the following broadly applicable MIPS quality measures that are relevant to behavioral health, including mental health and SUDs. The quality measures below address preventive screenings, which support the capture of the patient's voice and safety for patients that are experiencing behavioral health, including mental health and SUD disorders:

- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for patients who screen positive.

- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

Improvement Activities

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We propose to include 18 improvement activities that reflect actions and processes undertaken by clinicians who provide neurological care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing neurological care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_12: Use evidence-based decision aids to support shared decision-making.
- IA_BE_16: Promote Self-management in Usual Care
- IA_BE_23: Integration of patient coaching practices between visits
- IA_BMH_2: Tobacco use
- IA_BMH_5: MDD prevention and treatment interventions
- IA_BMH_7: Implementation of Integrated Patient Centered Behavioral Health Model
- IA_BMH_XX: Behavioral/mental health and substance use screening & referral for pregnant and postpartum women
- IA_BMH_XX: Behavioral/mental health and substance use screening & referral for older adults
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PM_6: Use of toolsets or other resources to close healthcare disparities across communities
- IA_PSPA_32: Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

Cost Measures

We propose to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic behavioral health, including mental health and SUDs. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in mental health and SUDs and align with the other measures and activities within this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including hospitalizations for mental health conditions and SUDs.
- Depression: This episode-based cost measures evaluates a clinician’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat depression. While interested parties expressed concerns with the inclusion of this measure within this MVP during the 2024 MVP candidate feedback period, this measure is appropriate for use in MIPS for the reasons described in section IV.A.4.f.(2) of this proposed rule.
- Psychoses and Related Conditions: This episode-based cost measure evaluates a clinician’s risk-adjusted cost to Medicare for patients who receive inpatient treatment for psychoses or related conditions during the performance period. This acute inpatient medical condition measure includes costs of services that are clinically related to the attributed clinician’s role in managing care during each episode, from the clinical event that opens, or “triggers,” the episode through 45 days after the trigger. While interested parties expressed concerns with the inclusion of this measure within this MVP during the 2024 MVP candidate feedback period, this measure is appropriate for use in MIPS for the reasons described in section IV.A.4.f.(2) of this proposed rule.

TABLE A.4: Quality Care in Mental Health and Substance Use Disorders MVP

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the Quality Care in Mental Health and Substance Use Disorders MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (*): existing quality measures and improvement activities with proposed revisions

Double asterisk (**): quality measures that are proposed for submission only when included in an MVP

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

Pound sign (#): QCDR measures proposed in this MVP table pending testing data

A.5 Rehabilitative Support for Musculoskeletal Care MVP

The proposed Rehabilitative Support for Musculoskeletal Care MVP focuses on the clinical theme of promoting quality care for patients. This proposed MVP would be most applicable to clinicians and NPPs who specialize in providing rehabilitative support for musculoskeletal care such as chiropractic, physiatry, physical therapy and occupational therapy, as well as nurse practitioners and physician assistants.

Quality Measures

We propose to include 10 MIPS quality measures within the quality performance category of this MVP, which promote rehabilitative support for patients. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in providing rehabilitative support for musculoskeletal care:

- Q217: Functional Status Change for Patients with Knee Impairments: This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the knee. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM

for reporting of this quality measure.

- **Q218: Functional Status Change for Patients with Hip Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the hip. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q219: Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the lower leg, foot or ankle. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q220: Functional Status Change for Patients with Low Back Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the low back. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q221: Functional Status Change for Patients with Shoulder Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the shoulder. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q222: Functional Status Change for Patients with Elbow, Wrist or Hand Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the elbow, wrist or hand. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q478: Functional Status Change:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the neck. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.

In addition, we are proposing to include the following broadly applicable MIPS quality measures that are relevant to rehabilitative support for musculoskeletal care. The quality measures below address preventive screenings and care plan for falls:

- **Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** This MIPS quality measure assesses patients, aged 18 years and older, for a BMI documented with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- **Q155: Falls: Plan of Care:** This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

Improvement Activities

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We propose to include 17 improvement activities that reflect actions and processes undertaken by clinicians who provide rehabilitative support for musculoskeletal care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing rehabilitative support for musculoskeletal care. The following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote Use of Patient-Reported Outcome Tools
- IA_AHE_6: Provide Education Opportunities for New Clinicians
- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BMH_12: Promoting Clinician Well-Being
- IA_BMH_XX: Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA_CC_8: Implementation of documentation improvements for practice/process improvements
- IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_EPA_3: Collection and use of patient experience and satisfaction data on access
- IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways

- IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA_PSPA_16: Use of decision support and standardized treatment protocols
- IA_PSPA_21: Implementation of fall screening and assessment programs

Cost Measures

We propose to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of rehabilitative support for musculoskeletal care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the cost measure to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in rehabilitative support for musculoskeletal care and aligns with the other measures and activities included within this MVP:

- Low Back Pain: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat low back pain. This aligns with Q220: Functional Status Change for Patients with Low Back Impairments.

TABLE A.5: Rehabilitative Support for Musculoskeletal Care MVP

As stated in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Rehabilitative Support for Musculoskeletal Care MVP. We request comment on the measures and activities included in this MVP.

Symbol Key:

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Group B: Modifications to Previously Finalized MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

TABLE B.1: Advancing Cancer Care MVP

Table B.1 represents the measures and activities that were finalized within the Advancing Cancer Care MVP in (87 FR 70653 through 70659) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Advancing Cancer Care MVP within the quality performance category of this MVP to include three additional MIPS quality measures and one additional QCDR measure that address appropriate cancer care treatment. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians providing cancer care to patients:

- **Q490: Appropriate Intervention of Immune-related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors:** This MIPS quality measure identifies patients diagnosed with cancer who are on immune checkpoint inhibitor therapy and develop grade 2 or above diarrhea and/or colitis to assess for appropriate intervention of managing immune-related diarrhea and colitis.
- **PIMSH13: Oncology: Mutation testing for stage IV lung cancer completed prior to start of targeted therapy:** This QCDR measure assesses the use of mutation testing for all actionable biomarkers with appropriate mutation-directed therapy, in accordance with current National Comprehensive Cancer Network (NCCN) guidelines for stage IV non-small cell lung cancer.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we are proposing to add the following broadly applicable MIPS quality measure, which is relevant to patients receiving cancer care and their understanding of their health care treatment journey:

- **TBD: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient’s understanding and confidence in their ability to manage their health and be an active partner in their health care journey.

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add six additional improvement activities that address maintenance requests from the public, and that address priority areas including clinician well-being, interoperability, patient safety, and expanding use of telehealth:

- **IA_BMH_12: Promoting Clinician Well-Being**
- **IA_CC_13: Practice Improvements to Align with OpenNotes Principles**
- **IA_EPA_2: Use of telehealth services that expand practice access**
- **IA_ERP_4: Implementation of a Personal Protective Equipment (PPE) Plan**
- **IA_PSPA_13: Participation in Joint Commission Evaluation Initiative**
- **IA_PSPA_28: Completion of an Accredited Safety or Quality Improvement Program**

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
 Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures
 Single asterisk (*): existing quality measures and improvement activities with proposed revisions
 Single exclamation point (!): quality measures that are considered high priority
 Double exclamation point (!!): outcome measures
 Tilde (~): improvement activities that include a health equity component
 Percent (%): indication that attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category
 Pound sign (#): QCDR measures proposed in this MVP table pending testing data

Quality	Improvement Activities	Cost
(!) Q047: Advance Care Plan (Collection Type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications)	IA_BE_4: Engagement of patients through implementation of improvements in patient portal	Total Per Capita Cost (TPCC)

TABLE B.2: Optimal Care for Kidney Health MVP

Table B.2 represents the measures and activities that were finalized within the Optimal Care for Kidney Health MVP in (87 FR 70660 through 70664) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Optimal Care for Kidney Health MVP within the quality performance category of this MVP to include to include six additional MIPS quality measures that encompass the appropriate care for kidney health and assess appropriate inclusion on the transplant waitlist. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP encompass appropriate care for kidney health and assess appropriate inclusion on the transplant waitlist:

- Q488: Kidney Health Evaluation: This MIPS quality measure ensures patients with diabetes receive a kidney health evaluation including both an estimated glomerular filtration rate (eGFR) and a urine albumin-creatinine ratio (uACR).
- TBD: First Year Standardized Waitlist Ratio (FYSWR): This proposed MIPS quality measure ensures patients with end-stage renal disease (ESRD) are placed on the kidney or kidney-pancreas transplant list or that the patient received a living donor transplant in the first year after initiation of dialysis.
- TBD: Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW): This proposed MIPS quality measure captures the adjusted count of patient months for dialysis patients on the kidney and kidney-pancreas transplant waitlist and patients on the kidney or kidney -pancreas transplant waitlist in active status.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we are proposing to add the following two broadly applicable MIPS quality measures which address patient's understanding of their health care journey:

- Q493: Adult Immunization Status: This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
- TBD: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

We are also proposing to modify the previously finalized Optimal Care for Kidney Health MVP to remove two MIPS quality measures that would be replaced by MIPS quality measure Q493 Adult Immunization Status, which is a more robust measure supporting the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for this at-risk patient population. The quality actions represented in the below measures would be captured in the composite measure:

- Q110: Preventive Care and Screening: Influenza Immunization
- Q111: Pneumococcal Vaccination Status for Older Adults

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add two additional improvement activities that address maintenance requests from the public, and that address priority areas including food insecurity and population health:

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_PM_13: Chronic Care and Preventative Care Management for Empaneled Patients

We are also proposing to remove the following improvement activity in response to maintenance requested from the public and interested-party feedback and agree with the recommendation that IA_PM_13: Chronic Care and Preventative Care Management for Empaneled Patients better targets the MVP population while still advancing care coordination:

- IA_PM_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

TABLE B.3: Optimal Care for Patients with Episodic Neurological Conditions MVP

Table B.3 represents the measures and activities that were finalized within the Optimal Care for Patients with Episodic Neurological Conditions MVP in (87 FR 70665 through 70668) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP within the quality performance category of this MVP to include to include two additional MIPS quality measures that address health equity and the patient’s understanding of their health care journey. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we are proposing to add the following broadly applicable MIPS quality measure, which is relevant to patients receiving care for episodic neurological conditions. The quality measure below addresses the patient’s understanding of their health care journey:

- **TBD: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient’s understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

We are also proposing to modify the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP to remove one QCDR measure as it is a process measure with no follow-up or link to a health outcome as doesn’t ensure preventive therapies were successful.

- AAN30: Migraine Preventive Therapy Management

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add one additional improvement activity that addresses a maintenance request from the public and that addresses the priority area of including the patient voice in their health care decision making:

- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
 Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures
 Single asterisk (*): existing quality measures and improvement activities with proposed revisions

Table B.5: Advancing Care for Heart Disease MVP

Table B.5 represents the measures and activities that were finalized within the Advancing Care for Heart Disease MVP in (87 FR 70679 through 70683) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Advancing Care for Heart Disease MVP within the quality performance category of this MVP to include four additional MIPS quality that are relevant to patients receiving care for heart disease. We reviewed the quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP are relevant to patients receiving care for heart disease. The quality measures below address appropriate medications for patients with coronary artery disease (CAD):

- **Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy:** This MIPS quality measure assesses that patients diagnosed with CAD are prescribed aspirin or clopidogrel.
- **Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker–(ARB)–Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF \leq 40%):** This MIPS quality measure assesses that patients diagnosed with CAD, in addition to a prior myocardial infarction or current or prior LVEF \leq 40%, are prescribed a beta-blocker therapy.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we are proposing to add one additional broadly applicable MIPS quality measure that is relevant to patients receiving care for heart disease. The quality measure below addresses the patient’s understanding of their health care journey:

- **TBD: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add two additional improvement activities that address maintenance requests from the public, and that address priority areas including food insecurity and the incorporation of patient voices into health care decision making:

- **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**
- **IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings**

Cost Measures

We are also proposing to add two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of cardiac care. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in cardiac care and align with the other measures and activities included within this MVP:

- **Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including cardiac care. An interested party recommended that the MSPB Clinician measure replace the TPCC measure. We agree that it is appropriate to include MSPB Clinician within this MVP. However, TPCC is appropriate to include in this MVP for the reasons stated when the measure was initially finalized for use in this MVP (86 FR 66012 through 66103).
- **Heart Failure:** This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat heart failure. The addition of this measure aligns with included quality measures, such as Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepriylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) and Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD).

Symbol Key:

Table B.6: Advancing Rheumatology Patient Care MVP

Table B.6 represents the measures and activities that were finalized within the Advancing Rheumatology Patient Care MVP in (87 FR 70687 through 70689) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Advancing Rheumatology Patient Care MVP within the quality performance category of this MVP to include three additional MIPS quality measures and one QCDR measure that are relevant to patients receiving rheumatology care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following QCDR measure proposed within this MVP addresses appropriate clinical care for patients with rheumatological conditions:

- UREQA10: Ankylosing Spondylitis: Controlled Disease Or Improved Disease Function: This QCDR outcome measure ensures assessment of disease control or improvement based on Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) score in patients with ankylosing spondylitis.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we are proposing to include two additional broadly applicable MIPS quality measures that are relevant to patients receiving care for rheumatological conditions.

The quality measures below address immunization status and the patient’s understanding of their health care journey:

- Q493: Adult Immunization Status: This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
- TBD: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

We are also proposing to modify the previously finalized Optimal Care for Kidney Health MVP to remove one MIPS quality measure that would be replaced by MIPS quality measure Q493: Adult Immunization Status, which is a more robust measure supporting the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for this at-risk patient population. The quality actions represented in the below measure would be captured in the composite measure:

- Q111: Pneumococcal Vaccination Status for Older Adults

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add three additional improvement activities that address maintenance requests from the public, and that address priority areas including incorporating the patient voice into health care decision making:

- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_24: Financial Navigation Program
- IA_BE_25: Drug Cost Transparency

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

TABLE B.7: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

Table B.7 represents the measures and activities that were finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP in (87 FR 70690 through 70692) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to include three additional MIPS quality measures and one QCDR measure that are relevant to patients receiving emergency medical care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP address appropriate use of medication and diagnostic testing:

- Q065: Appropriate Treatment for Upper Respiratory Infection (URI): This appropriate use MIPS quality measure evaluates that patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) did not receive an antibiotic order.
- Q416: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years: This appropriate use MIPS quality measure evaluates the appropriate use of head computed tomography (CT) in pediatric patients presenting with minor blunt head trauma.
- HCPR24: Appropriate Utilization of Vancomycin for Cellulitis: This appropriate use QCDR measure evaluates for appropriate antibiotic ordering for patients diagnosed with cellulitis.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

We are also proposing to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to remove one QCDR measure as it is a process measure that should be a standard of care as demonstrated by the measure's high performance in the PY2023 MIPS Historical Quality Benchmarks file.

- ACEP21: Coagulation Studies in Patients Presenting with Chest Pain with No Coagulopathy or Bleeding

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add one additional improvement activity that addresses a maintenance request from the public, and that addresses the priority area of clinician well-being:

- IA_BMH_12: Promoting Clinician Well-Being

We are also proposing to remove the following improvement activities after consideration of feedback received from the public through the MVP maintenance process:

- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes

Cost Measures

In addition, we are proposing to add one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of emergency medicine. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in emergency medicine and aligns with the other measures and activities included within this MVP:

- Emergency Medicine: This episode-based cost measure evaluates a clinician's risk-adjusted cost to Medicare for patients who have an emergency department (ED) visit during the performance period. This measure includes costs of Part A and B services during each episode from the start of the ED visit that opens, or "triggers," the episode through 14 days after the trigger, excluding a defined list of services for each ED visit type that are unrelated to the ED care.

We are also proposing to remove the following cost measure because the Emergency Medicine episode-based cost measure more closely aligns with the measures and activities included in this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (*): existing quality measures and improvement activities with proposed revisions

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

TABLE B.8: Improving Care for Lower Extremity Joint Repair MVP

Table B.8 represents the measures and activities that were finalized within the Improving Care for Lower Extremity Joint Repair MVP in (87 FR 70693 through 70695) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Improving Care for Lower Extremity Joint Repair MVP to include one additional MIPS quality measure that is relevant to patients receiving care for lower extremity joint repair. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP.

TABLE B.9: Patient Safety and Support of Positive Experiences with Anesthesia MVP

Table B.9 represents the measures and activities that were finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP in (87 FR 70695 through 70697) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP to include one additional MIPS quality measure and two additional QCDR measures that are relevant to patients receiving anesthesia care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following QCDR measures proposed within this MVP address appropriate utilization of general anesthesia and rates of intraoperative hypotension:

- **ABG44: Low Flow Inhalational General Anesthesia:** This QCDR measure identifies adult patients undergoing elective procedures, lasting at minimum 30 minutes, that require inhalational general anesthesia to assess for appropriate total fresh gas flow during the maintenance phase of the anesthetic.
- **EPREOP31: Intraoperative Hypotension among Non-Emergent Noncardiac Surgical Cases:** This outcome QCDR measure identifies adult patients undergoing noncardiac, non-emergency surgery requiring general, neuraxial, or regional anesthesia care to evaluate if the patient had a mean arterial pressure (MAP) below 65 mmHg exceeding a cumulative length of 15 minutes.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

We are also proposing to modify the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP to remove one QCDR measure as it is a process measure that should be a standard of care as demonstrated by the measure's high performance in the PY2023 MIPS Historical Quality Benchmarks file.

- **AQI69: Intraoperative Antibiotic Redosing**

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP.

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (*): existing quality measures and improvement activities with proposed revisions

TABLE B.10: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

Table B.10 represents the measures and activities that were finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP in (87 FR 70698 through 70700) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

Quality Measures

We are proposing to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP within the quality performance category of this MVP to include to include one additional MIPS quality measure that addresses health equity. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we are proposing to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add three additional improvement activities that address maintenance requests from the public, and that address priority areas including food insecurity, incorporating patient voices into health care decision making, and behavioral and mental health:

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BMH_XX: Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults

Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (*): existing quality measures and improvement activities with proposed revisions

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

Pound sign (#): QCDR measures proposed in this MVP table pending testing data

TABLE B.11: Value in Primary Care MVP

We are proposing to modify the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care MVP. Table B.11 represents the measures and activities that were finalized within the Promoting Wellness MVP (87 FR 70673 through 70678) and the Optimizing Chronic Disease Management MVP (87 FR 70684 through 70686) with modifications proposed for the CY 2024 performance

period/2026 MIPS payment year and future years. This MVP also aligns with the Adult Universal Core Set/Patient Care First CMMI Model primary care measures.

Quality Measures

We are proposing to modify the previously finalized Promoting Wellness MVP to include six additional MIPS quality measures that are relevant to patients receiving primary or preventive care. The quality measures below address appropriate clinical care for patients receiving primary or preventive care including well visits or condition specific visits in the auspices of primary care:

- **Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%):** This inverse outcome MIPS quality measure assesses diabetic patients for poor control of their HbA1c.
- **Q236: Controlling High Blood Pressure:** This outcome MIPS quality measure assesses patient diagnosed with hypertension for adequately controlled blood pressure.
- **Q305: Initiation and Engagement of Alcohol and Other Drug Dependence Treatment:** This MIPS quality measure ensures patients 13 years of age and older with a new substance use disorder (SUD) episode have the initiation of intervention or medication within 14 days of the new SUD episode or engage in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication within 34 days of the initiation.
- **Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease:** This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.
- **TBD: Preventive Care and Wellness (composite):** This composite MIPS quality measure combines 7 current preventive care measures with age and sex appropriate preventive screenings and wellness services, creating a robust, broadly encompassing preventive care assessment. The measure would set a more stringent performance standard by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care, and ensuring more all-inclusive preventive care.
- **TBD: Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk:** This proposed MIPS quality measure ensures adult patients with suicidal ideation, behavior symptoms or increased suicide risk have a suicide safety plan initiated, reviewed, and/or updated in collaboration between the patient and their clinician.

We are proposing to modify the previously finalized Promoting Wellness MVP to include two additional broadly applicable MIPS quality measures that are relevant to patients receiving primary or preventive care. The quality measures below address health equity, immunization status, and the patient's wishes:

- **Q047: Advance Care Plan:** This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker for patients aged 65 years and older.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

We are also proposing to modify the previously finalized Promoting Wellness MVP to remove four MIPS quality measures that would be replaced by MIPS quality measure TBD: Preventive Care and Wellness (composite), which is a more robust measure supporting the comprehensive evaluation of compliance with recommended adult preventive care, improving quality care and preventing/controlling disease for the general patient population. The quality actions represented in the measures below would be captured in the composite measure:

- Q112: Breast Cancer Screening
- Q113: Colorectal Cancer Screening
- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Additionally, the following five measures are being proposed for removal to streamline the clinical concepts within the Value in Primary Care MVP to align with the clinical concepts of preventive care, quality chronic disease management, and alignment with the Adult Universal Foundation measures.⁴⁶⁶ The below MIPS quality measures represent important preventive screening and patient voice measures clinical concepts and as such, the measure or concept can be found in other MVPs:

- Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age
- Q309: Cervical Cancer Screening
- Q310: Chlamydia Screening in Women
- Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients
- Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling

Improvement Activities

For the reasons stated in the introduction of this appendix, we are proposing to add IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we are proposing to add three additional improvement

⁴⁶⁶ D.B. Jacobs, M. Schreiber, M. Seshamani, D. Tsai, E. Fowler, L.A. Fleisher. Aligning quality measures across CMS—The universal foundation: N Engl J Med (2023).

activities that address maintenance requests from the public, and that address priority areas including equity, food insecurity, and clinical decision support (CDS):

- IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA_PM_XX: Use of Decision Support to Improve Adherence to Cervical Cancer Screening and Management Guidelines
- IA_PM_XX: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services

We are also proposing to remove the following two improvement activities in response to interested-party feedback:

- IA_BMH_9: Unhealthy Alcohol Use for Patients with Co-occurring Conditions of Mental Health and Substance Abuse and Ambulatory Care Patients
- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes

Cost Measures

We propose to add four MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of cardiac care. The additional cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in cardiac care and align with the other measures and activities included within this MVP:

- Asthma/COPD: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat asthma or COPD.
- Diabetes: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat diabetes.
- Depression: This episode-based cost measure evaluates a clinician’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat depression.
- Heart Failure: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat heart failure.
